GENERAL DESCRIPTION

The ADM3057E-EP is a 3 kV rms isolated controller area network (CAN) physical layer transceiver with integrated isolated dc-to-dc converter. The ADM3057E-EP meets flexible data rate (CAN FD) requirements for operation to 5 Mbps and higher and complies with the ISO 11898-2: 2016 standard. The ADM3057E-EP is capable of supporting data rates as high as 12 Mbps.

The device employs Analog Devices, Inc., *iCoupler*® technology to combine a 3-channel isolator, a CAN transceiver, and an Analog Devices *isoPower*® dc-to-dc converter into a single, surface-mount,

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

small outline integrated circuit (SOIC) package. The device is powered by a single 5 V supply, realizing a fully isolated solution for CAN and CAN FD. Radiated emissions from the high frequency switching of the dc-to-dc converters are kept below EN 55022 Class B limits by continuous adjustments to the switching frequency.

The ADM3057E-EP provides complete isolation between the CAN controller and physical layer bus. Safety and regulatory approvals (pending) for 3 kV rms isolation voltage, 10 kV surge test, and 7.8 mm creepage and clearance ensure the ADM3057E-EP meets application reinforced isolation requirements.

Low propagation delays through the isolation support longer bus cables. Slope control mode is available for standard CAN at low data rates. Standby mode minimizes power consumption when the bus is idle or if the node goes offline. Silent mode allows the TXD input to be ignored for listen only mode.

Dominant timeout functionality protects against bus lockup in a fault condition. The current limiting and thermal shutdown features protect against output short circuits. The device is fully specified over a temperature range of -55°C to +105°C.

Additional application and technical information can be found in the [ADM3057E](#) data sheet.

¹ X means irrelevant.

² Z means high impedance within one diode drop of ground.

³ WUP means remote wake-up pattern.

⁴ Limited by t_{DT}.

⁵ RS can only set the transceiver to standby mode. RS does not control the digital isolator.
