*The design of this product (including software) and its accessories is under tutelage of laws. Any action to violate relevant right of our product will be penalized through law. Please consciously observe relevant local laws in the use of this product.*

## 1. Introduction

---

Grove - MOSFET enables you to control higher voltage project, say 15VDC, with low voltage, say 5V, on microcontroller. MOSFET is also a kind of switch, but its switching frequency can reach up to 5MHz, much faster than normal mechanical relay. There are two screw terminals on the board. One for outer power source and the other for device you want to control. Grove - MOSFET will pass the power from one end to another when closed. But if outer power source is absent, your device can still draw power from microcontroller via the Grove interface.

## 2. Specification

---

- Working voltage: 5V
- Vin: 5 ~ 15V
- MOSFET Model: CJQ4435

### 3. Interface

---

- Vin: accepts 5V ~ 15V power of which current is less than 2A.
- Vout: attach actuators here.

## 4. Demonstration

---

### 4.1 With Arduino

Here we demonstrates how to use Grove - MOSFET to control a motor. We provide power for it with external power source, but if your controlled device needs current smaller than 300mA, Seeeduino can totally support it and no extra power source needed.

```
// demo of Grove - MOSFET
// use pin 6 to control a motor

int motorPin = 6;

void setup()
{
  Serial.begin(38400);
  pinMode(motorPin, OUTPUT);
  Serial.println("Grove - MOSFET Test Demo!");
}

void loop()
{
  motorOnThenOffWithSpeed();
  motorAcceleration();
}

void motorOnThenOffWithSpeed()
{
```

```

int onSpeed = 200; // a number between 0 (stopped) and 255 (full speed)
int onTime = 2500;
int offSpeed = 50; // a number between 0 (stopped) and 255 (full speed)
int offTime = 1000;
analogWrite(motorPin, onSpeed);
delay(onTime);
analogWrite(motorPin, offSpeed);
delay(offTime);
}

void motorAcceleration()
{
  int delayTime = 50;
  for(int i=0; i<256; i++)
  {
    analogWrite(motorPin, i);
    delay(delayTime);
  }

  for(int i=255; i>=0; i--)
  {
    analogWrite(motorPin, i);
    delay(delayTime);
  }
}

```

## 4.2 With Raspberry Pi

1. You should have got a raspberry pi and a grovepi or grovepi+.
2. You should have completed configuring the development enviroment, otherwise follow [here](#).
3. Connection.

- Plug the sensor to grovepi socket D6 by using a grove cable.

4. Navigate to the demos' directory:

```
cd yourpath/GrovePi/Software/Python/
```

- To see the code

```
nano grove_mosfet.py # "Ctrl+x" to exit #
import time
import grovepi
```

```
# Connect the Grove MOSFET to analog port D6
# SIG, NC, VCC, GND
mosfet = 6

grovepi.pinMode(mosfet, "OUTPUT")
time.sleep(1)

while True:
    try:
        # Full speed
        grovepi.analogWrite(mosfet, 255)
        print "full speed"
        time.sleep(2)

        # Half speed
        grovepi.analogWrite(mosfet, 128)
        print "half speed"
        time.sleep(2)

        # Off
        grovepi.analogWrite(mosfet, 0)
        print "off"
        time.sleep(2)

    except KeyboardInterrupt:
        grovepi.analogWrite(mosfet, 0)
        break
    except IOError:
        print "Error"
```

## 5. Run the demo.

```
sudo python grove_mosfet.py
```

## 5. Resource

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
