

### 2016L Series

#### Description

The 2016L Series PTC provides surface mount overcurrent protection for low voltage ( $\leq 60V$ ) applications where resettable protection is desired.

#### Features

- RoHS compliant, lead-free and halogen-free
- High voltage
- Fast response to fault currents
- Low-profile

#### Agency Approvals

| Agency  | Agency File Number |
|---|--------------------|
|  | E183209            |
|  | R50119118          |

#### Applications

- IEEE 1394 port protection
- Powered ethernet port protection (IEEE 802.3 af)
- Automotive electronic control module protection
- Low voltage telecom equipment protection

#### Electrical Characteristics

| Part Number | Marking  | $I_{hold}$ (A) | $I_{trip}$ (A) | $V_{max}$ (Vdc) | $I_{max}$ (A) | $P_d$ typ. (W) | Maximum Time To Trip |             | Resistance             |                         | Agency Approvals  |   |
|-------------|----------|----------------|----------------|-----------------|---------------|----------------|----------------------|-------------|------------------------|-------------------------|---|---|
|             |          |                |                |                 |               |                | Current (A)          | Time (Sec.) | $R_{min}$ ( $\Omega$ ) | $R_{1max}$ ( $\Omega$ ) |  |  |
| 2016L030    | LF030    | 0.30           | 0.60           | 60              | 20            | 1.40           | 1.5                  | 3.0         | 0.500                  | 2.300                   | X   | X   |

$I_{hold}$  = Hold current: maximum current device will pass without tripping in 20°C still air.

$I_{trip}$  = Trip current: minimum current at which the device will trip in 20°C still air.

$V_{max}$  = Maximum voltage device can withstand without damage at rated current ( $I_{max}$ )

$I_{max}$  = Maximum fault current device can withstand without damage at rated voltage ( $V_{max}$ )

$P_d$  = Power dissipated from device when in the tripped state at 20°C still air.

$R_{min}$  = Minimum resistance of device in initial (un-soldered) state.

$R_{typ}$  = Typical resistance of device in initial (un-soldered) state.

$R_{1max}$  = Maximum resistance of device at 20°C measured one hour after tripping or reflow soldering of 260°C for 20 sec.

**Caution:** Operation beyond the specified rating may result in damage and possible arcing and flame.

\* Agency Approval is Pending

#### WARNING

- Users shall independently assess the suitability of these devices for each of their applications
- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration
- Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the performance of these PPTC devices
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses
- Circuits with inductance may generate a voltage ( $L di/dt$ ) above the rated voltage of the PPTC device.

### Temperature Derating

| Part Number | Ambient Operation Temperature |       |      |      |      |      |      |      |      |
|-------------|-------------------------------|-------|------|------|------|------|------|------|------|

### Average Time Current Curves

The average time current curves and Temperature Derating curve performance is affected by a number of variables, and these curves provided as guidance only. Customer must verify the performance in their application.

### Temperature Derating Curve

Note:  
Typical Temperature derating curve, refer to table for derating data

### Soldering Parameters

|   |  |                  |
|---|--|------------------|
| <b>Profile Feature</b>  | Pb-Free Assembly                                 |                  |
| <b>Average Ramp-Up Rate (<math>T_{S(max)}</math> to <math>T_p</math>)</b> | 3°C/second max                                   |                  |
| <b>Pre Heat:</b>  | <b>Temperature Min (<math>T_{s(min)}</math>)</b> | 150°C            |
|   | <b>Temperature Max (<math>T_{s(max)}</math>)</b> | 200°C            |
|   | <b>Time (Min to Max) (<math>t_s</math>)</b>      | 60 – 180 secs    |
| <b>Time Maintained Above:</b>   | <b>Temperature (<math>T_L</math>)</b>            | 217°C            |
|   | <b>Temperature (<math>t_L</math>)</b>            | 60 – 150 seconds |
| <b>Peak / Classification Temperature (<math>T_p</math>)</b>               | 260 <sup>+0/-5</sup> °C                          |                  |
| <b>Time within 5°C of actual peak Temperature (<math>t_p</math>)</b>      | 20 – 40 seconds                                  |                  |
| <b>Ramp-down Rate</b>   | 6°C/second max                                   |                  |
| <b>Time 25°C to peak Temperature (<math>T_p</math>)</b>                   | 8 minutes Max.                                   |                  |

- All temperature refer to topside of the package, measured on the package body surface
- If reflow temperature exceeds the recommended profile, devices may not meet the performance requirements
- Recommended reflow methods: IR, vapor phase oven, hot air oven, N<sub>2</sub> environment for lead
- Recommended maximum paste thickness is 0.25mm (0.010inch)
- Devices can be cleaned using standard industry methods and solvents
- Devices can be reworked using the standard industry practices

### Physical Specifications

|                           |  |
|---------------------------|--|
| <b>Terminal Material</b>  | Solder-Plated Copper (Solder Material: Matte Tin(Sn))        |
| <b>Lead Solderability</b> | Meets EIA Specification RS186-9E, ANSI/J-STD-002 Category 3. |

### Environmental Specifications

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
