Connection Example

Figure 5 Connection example

The numbers above the module illustration identify the connector slots.

When connecting the actuators and sensors, observe the assignment of the terminal points to the process data (see page 12).

The module has an FE spring (metal clip) on the bottom of the electronics base. This spring creates an electrical connection to the DIN rail. Use grounding terminals to connect the DIN rail to protective earth ground. The module is grounded when it is snapped onto the DIN rail.
To ensure reliable functional earth grounding of the module even when the DIN rail is dirty or the metal clip is damaged, Phoenix Contact also recommends grounding the module via one of the FE terminal points.
