Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

Single P-Channel, Logic Level, PowerTrench™ MOSFET

General Description

This P-Channel Logic Level MOSFET is produced using Fairchild Semiconductor's advanced PowerTrench process that has been especially tailored to minimize the on-state resistance and yet maintain low gate charge for superior switching performance.

These devices are well suited for notebook computer applications: load switching and power management, battery charging circuits, and DC/DC conversion.

Features

- -11 A, -30 V. $R_{DS(ON)} = 0.014 \Omega @ V_{GS} = -10 \text{ V}$,
 $R_{DS(ON)} = 0.020 \Omega @ V_{GS} = -4.5 \text{ V}$.
- Low gate charge (30nC typical).
- High performance trench technology for extremely low $R_{DS(ON)}$.
- High power and current handling capability.
