

## GENERAL DESCRIPTION

The XR3160 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards. Full operation requires only four external charge pump capacitors.

The RS-485/RS-232 pin selects RS-485 mode when high and RS-232 mode when low. The HALF/FULL pin configures the RS-485 modes as either half or full duplex.

The high speed drivers operate up to 20Mbps in RS-485/422 modes, and up to 1Mbps in RS-232 mode. All drivers can be slew limited to 250kbps in any mode to minimize electromagnetic interference (EMI) by setting the dedicated SLEW pin low.

All transmitter outputs and receiver inputs feature robust electrostatic discharge (ESD) protection to  $\pm 15\text{kV}$  IEC 61000-4-2 Airgap,  $\pm 15\text{kV}$  Human Body Model (HBM) and  $\pm 8\text{kV}$  IEC 61000-4-2 Contact. Each receiver output has full fail-safe protection to avoid system lockup, oscillation, or indeterminate states by defaulting to logic-high output level when the inputs are open, shorted, or terminated but undriven. No external biasing resistors are required.

The RS-232 receiver inputs include a  $5\text{k}\Omega$  pull-down to ground when in RS-232 mode. The RS-485/422 receiver inputs are high impedance ( $>96\text{k}\Omega$ ), allowing up to 256 devices on a single communication bus (1/8th unit load).

The XR3160 operates from a single power supply, 3V to 5.5V, with low idle current. The shutdown mode consumes less than  $1\mu\text{A}$  in low power standby operation with RS-232 receivers enabled.

## FEATURES

- **Pin Compatible Upgrade** for MAX3160 (20 SSOP)
- IEC Level 4 ESD Protection
  - $\pm 15\text{kV}$  IEC 61000-4-2 Air Gap Discharge
  - $\pm 8\text{kV}$  IEC 61000-4-2 Contact Discharge
  - $\pm 15\text{kV}$  Human Body Model (HBM)
- **20Mbps RS-485** and 1Mbps RS-232 Data Rates
- Pin-Selectable 250kbps Slew Limiting
- **Single Supply Operation from +3V to +5.5V**
- 2 Drivers, 2 Receivers RS-232/V.28
- 1 Driver, 1 Receiver RS-485/422
  - Full or Half Duplex Configuration
  - 1/8th Unit Load, up to 256 receivers on bus
- RS-485/422 Enhanced Receiver Fail-safe for open, shorted, or terminated but idle inputs
- **10nA Shutdown Supply Current** (typical)

## TYPICAL APPLICATIONS

- Software Programmable Serial Ports (RS-232, RS-422, RS-485)
- Embedded and Industrial PCs (IPC)
- Process Control Equipment
- Point-Of-Sales Equipment
- Networking Equipment
- HVAC Controls Equipment
- Building Security and Automation

## ORDERING INFORMATION<sup>(1)</sup>

PART NUMBER	OPERATING TEMPERATURE RANGE	LEAD-FREE	PACKAGE	PACKAGING METHOD
XR3160EIU-F	-40°C to +85°C	Yes <sup>(2)</sup>	20-pin SSOP	Tube
XR3160EIUTR-F				Tape and Reel
XR3160ECU-F	0°C to +70°C			Tube

### NOTE:

1. Refer to [www.exar.com/XR3160](http://www.exar.com/XR3160) for most up-to-date Ordering Information.
2. Visit [www.exar.com](http://www.exar.com) for additional information on Environmental Rating.

**ABSOLUTE MAXIMUM RATINGS**

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections to the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability and cause permanent damage to the device.

Supply Voltage $V_{CC}$	-0.3V to +6.0V
Voltage at TTL Input Pins	-0.3V to +6.0V
Receiver Input Voltage (from Ground)	$\pm 18V$
Driver Output Voltage (from Ground)	$\pm 18V$
Short Circuit Duration, TX out to Ground	Continuous
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C
Power Dissipation 20-pin SSOP (derate 12.0mW/°C above +70°C)	662mW
ESD Ratings	
HBM - Human Body Model (Tx Output & Rx Input pins)	$\pm 15kV$
HBM - Human Body Model (all other pins)	$\pm 3kV$
IEC 61000-4-2 Airgap Discharge (Tx Output & Rx Input pins)	$\pm 15kV$
IEC 61000-4-2 Contact Discharge (Tx Output & Rx Input pins)	$\pm 8kV$

**CAUTION:**

ESD (ElectroStatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

## PRODUCT SUMMARY

The XR3160 is an advanced multiprotocol transceiver supporting RS-232, RS-485, and RS-422 serial standards. Full operation requires only four external charge pump capacitors.

### ENHANCED FAILSAFE

The enhanced failsafe feature of the XR3160 guarantees a logic-high receiver output when the receiver inputs are open, shorted, or terminated but idle/undriven. The enhanced failsafe interprets 0V differential as a logic high with a minimum 50mV noise margin, while maintaining compliance with the EIA/TIA-485 standard of  $\pm 200\text{mV}$ . No external biasing resistors are required, further easing the usage of multiple protocols over a single connector.

### $\pm 15\text{kV}$ ESD PROTECTION

ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The bus pins (driver outputs and receiver inputs) have extra protection structures, which have been tested up to  $\pm 15\text{kV}$  without damage. These structures withstand high ESD in all states: normal operation, in shutdown, and when powered off.

ESD protection is tested in various ways. MaxLinear uses the following methods to qualify the protection structures designed into XR3160:

- $\pm 8\text{kV}$  using IEC 61000-4-2 Contact Discharge
- $\pm 15\text{kV}$  using IEC 61000-4-2 Airgap Discharge
- $\pm 15\text{kV}$  using the Human Body Model (HBM)

The IEC 61000-4-2 standard is more rigorous than HBM, resulting in lower voltage levels compared with HBM for the same level of ESD protection. Because IEC 61000-4-2 specifies a lower series resistance, the peak current is higher than HBM. The XR3160 has passed both HBM and IEC 61000-4-2 testing without damage.
