

FEATURES

- Very wide bandwidth to 24 GHz**
- Time delay range: 70 ps typical**
- Single-ended or differential operation**
- Adjustable differential output amplitude with 780 mV p-p typical at 10 GHz**
- Delay control modulation bandwidth: 1.6 GHz typical**
- Single supply: 3.3 V**
- 24-terminal ceramic, leadless chip carrier (LCC)**

APPLICATIONS

- Synchronization of clock and data**
- Transponder design**
- Serial data transmissions up to 32 Gbps**
- Broadband test and measurement**
- RF ATE applications**

GENERAL DESCRIPTION

The **HMC911** is a broadband time delay with 62 ps to 75 ps continuously adjustable delay range to 24 GHz. The delay control is linearly monotonic with respect to the differential delay control voltage (V_{DCP} and V_{DCN}), and the control input has a modulation bandwidth of 1.6 Hz. The **HMC911** provides a differential output voltage with constant amplitude for single-ended or differential input voltages above the input sensitivity level, and the output voltage swing can be adjusted using the V_{AC} control pin.

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The **HMC911** features internal temperature compensation and bias circuitry to minimize delay variations with temperature. All RF inputs and outputs of the **HMC911** are internally terminated with $50\ \Omega$ to V_{CC} and can be ac-coupled or dc-coupled. Output pins connect directly to a $50\ \Omega$ to V_{CC} terminated system. However, use dc blocking capacitors if the terminated system input is $50\ \Omega$ to a dc voltage other than V_{CC} .

The **HMC911** is available in a RoHS-compliant, 24-terminal, ceramic, leadless chip carrier.

18 GHz	350	375	640	mV p-p	Single-ended
	700	750	1280	mV p-p	Differential
22 GHz	340	350	640	mV p-p	Single-ended
	680	700	1280	mV p-p	Differential
CONTROL VOLTAGE (V_{AC})					
	1.7	2.6	2.7	V	
HARMONIC SUPPRESSION ($f_{IN} - 2f_{IN}$) ^{1,2}					
10 GHz	21		32	dBc	$V_{DCP} = V_{DCN} = 3.3\text{ V}$
20 GHz	19		30	dBc	
RETURN LOSS					
Input		9		dB	Frequency < 24 GHz
Output		10		dB	
RMS JITTER					
		0.3		ps, p-p	32 Gbps, 10101 ... data
TIME ³					
Rise (t_R)		15		ps	
Fall (t_F)		14		ps	
PROPAGATION DELAY					
		480		ps	$V_{DCP} = 2.7\text{ V}$, $V_{DCN} = 3.3\text{ V}$ (relative to zero time delay)

¹ Harmonic suppression measurements were taken for single-ended inputs and outputs.

² f_{IN} is the fundamental frequency.

³ $V_{INPUT} =$ differential 400 mV p-p, and $f_{DATA} = 22.5\text{ Gbps}$, and pseudorandom bit sequences (PRBS) $2^{33} - 1$

ABSOLUTE MAXIMUM RATINGS

Table 2.

Parameter	Rating
Power Supply Voltage (V_{CC})	-0.5 V to +3.75 V
Input Voltage (V_{IN})	$V_{CC} - 1.2$ V to $V_{CC} + 0.6$ V
Output Voltage (V_{OUT})	$V_{CC} - 1.2$ V to $V_{CC} + 0.6$ V
Delay Control Voltage (V_{DCP} , V_{DCN})	0 V to $V_{CC} + 0.6$ V
Power-Down (Enable) Pin (\overline{EN})	0 V to $V_{CC} + 0.6$ V
Amplitude Control (V_{AC})	0 V to $V_{CC} + 0.6$ V
Continuous Power Dissipation, P_{DISS} ($T_A = 85^\circ\text{C}$, Derate 54.96 mW/ $^\circ\text{C}$ above 85 $^\circ\text{C}$)	2.2 W
Thermal Resistance (Junction to Ground Paddle)	18.2 $^\circ\text{C}/\text{W}$
Channel Temperature (T_C)	125 $^\circ\text{C}$
Maximum Peak Reflow Temperature (MSL3) ¹	260 $^\circ\text{C}$
Storage Temperature Range	-65 $^\circ\text{C}$ to +125 $^\circ\text{C}$
Operating Temperature Range	-40 $^\circ\text{C}$ to +85 $^\circ\text{C}$
Electrostatic Discharge (ESD) Human Body Model (HBM)	Class 1B

¹ See the Ordering Guide section.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

NOTES
 1. NC = NO CONNECT.
 2. EXPOSED PAD. CONNECT THE EXPOSED PAD TO RF/DC GROUND

14816-002

Figure 2. Pin Configuration

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1, 18	NC	No Connect. These pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/dc ground externally.
2, 5, 14, 17	GND	Ground Pin. Connect these signal grounds to 0 V. See Figure 3 for the interface schematic.
3	INP	Positive Differential RF Input Pin. See Figure 4 for the interface schematic.
4	INN	Negative Differential RF Input Pin. See Figure 4 for the interface schematic.
6	$\overline{\text{EN}}$	Enable Pin for the Time Delay. For normal operation, leave this pin open or apply 3.3 V. To disable the HMC911, apply 0 V. When disabled, the total current consumption drops to 15 mA. See Figure 5 for the interface schematic.
7, 8, 11, 13	V_{EE}	Supply Grounds. Connect these pins to 0 V. See Figure 6 for the interface schematic.
9	V_{DCP}	Positive Differential Time Delay Control Pin. See Figure 7 for the interface schematic.
10	V_{DCN}	Negative Differential Time Delay Control Pin. See Figure 7 for the interface schematic.
12	V_{AC}	Output Amplitude Control Pin. See Figure 8 for the interface schematic.
15	QN	Negative Differential RF Output Pin. See Figure 9 for the interface schematic.
16	QP	Positive Differential RF Output Pin. See Figure 9 for the interface schematic.
19 to 24	V_{CC}	Positive Supply Pins. See Figure 10 for the interface schematic.
	EPAD	Exposed Pad. Connect the exposed pad to RF/dc ground.

APPLICATIONS INFORMATION

EVALUATION PRINTED CIRCUIT BOARD (PCB)

Generate the evaluation PCB used in this application with proper RF circuit design techniques. Signal lines at the RF port must have 50 Ω impedance, and the package ground leads and exposed paddle must be connected directly to the ground plane similar to what is shown in Figure 34. Use a sufficient number

of via holes to connect the top and bottom ground planes. Mount the evaluation board to an appropriate heat sink. The evaluation PCB shown is available from Analog Devices, Inc., upon request.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
