### Description

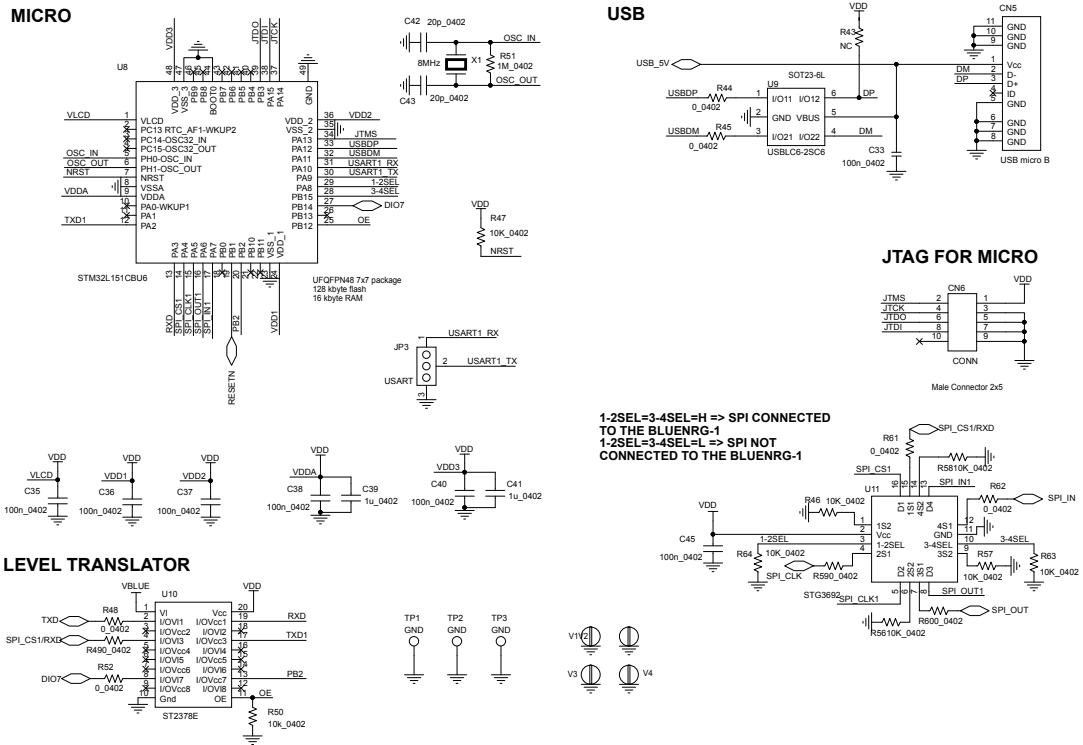

The **STEVAL-IDB007V2** evaluation platform is based on the **BlueNRG-1**, low power Bluetooth® smart system on chip, compliant with the Bluetooth® specification and supporting master, slave and simultaneous master-and-slave roles.

The STEVAL-IDB007V2 also provides a set of hardware resources for implementing a wide range of application scenarios: sensor data (accelerometer, pressure and temperature sensor), remote control (buttons and LEDs) and debug message management through USB virtual COM.

Three power options are available (USB only, battery only, and external power supply plus USB) for high application development and testing flexibility.
