

To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: <http://www.renesas.com>

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (<http://www.renesas.com>)

Send any inquiries to <http://www.renesas.com/inquiry>.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
 - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
 - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
 - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

1. Overview

These MCUs are fabricated using the high-performance silicon gate CMOS process, embedding the R8C/Tiny Series CPU core, and is packaged in a 20-pin molded-plastic LSSOP, SDIP or a 28-pin plastic molded-HWQFN. It implements sophisticated instructions for a high level of instruction efficiency. With 1 Mbyte of address space, they are capable of executing instructions at high speed.

Furthermore, the R8C/1B Group has on-chip data flash ROM (1 KB × 2 blocks).

The difference between the R8C/1A Group and R8C/1B Group is only the presence or absence of data flash ROM. Their peripheral functions are the same.

1.1 Applications

Electric household appliances, office equipment, housing equipment (sensors, security systems), portable equipment, general industrial equipment, audio equipment, etc.

1.2 Performance Overview

Table 1.1 outlines the Functions and Specifications for R8C/1A Group and Table 1.2 outlines the Functions and Specifications for R8C/1B Group.

Table 1.1 Functions and Specifications for R8C/1A Group

| | Item | Specification |
|-------------------------------|-------------------------------------|---|
| CPU | Number of fundamental instructions | 89 instructions |
| | Minimum instruction execution time | 50 ns ($f(XIN) = 20$ MHz, $VCC = 3.0$ to 5.5 V) 100 ns ($f(XIN) = 10$ MHz, $VCC = 2.7$ to 5.5 V) |
| | Operating mode | Single-chip |
| | Address space | 1 Mbyte |
| | Memory capacity | See Table 1.3 Product Information for R8C/1A Group |
| Peripheral Functions | Ports | I/O ports: 13 pins (including LED drive port) Input port: 3 pins |
| | LED drive ports | I/O ports: 4 pins |
| | Timers | Timer X: 8 bits \times 1 channel, timer Z: 8 bits \times 1 channel (Each timer equipped with 8-bit prescaler) Timer C: 16 bits \times 1 channel (Input capture and output compare circuits) |
| | Serial interfaces | 1 channel Clock synchronous serial I/O, UART 1 channel UART |
| | Clock synchronous serial interface | 1 channel I ² C bus Interface ⁽¹⁾ Clock synchronous serial I/O with chip select (SSU) |
| | A/D converter | 10-bit A/D converter: 1 circuit, 4 channels |
| | Watchdog timer | 15 bits \times 1 channel (with prescaler) Reset start selectable, count source protection mode |
| | Interrupts | Internal: 11 sources, External: 4 sources, Software: 4 sources, Priority levels: 7 levels |
| | Clock generation circuits | 2 circuits <ul style="list-style-type: none"> • Main clock oscillation circuit (with on-chip feedback resistor) • On-chip oscillator (high speed, low speed) High-speed on-chip oscillator has a frequency adjustment function |
| | Oscillation stop detection function | Main clock oscillation stop detection function |
| | Voltage detection circuit | On-chip |
| | Power-on reset circuit | On-chip |
| Electric Characteristics | Supply voltage | $VCC = 3.0$ to 5.5 V ($f(XIN) = 20$ MHz) $VCC = 2.7$ to 5.5 V ($f(XIN) = 10$ MHz) |
| | Current consumption | Typ. 9 mA ($VCC = 5.0$ V, $f(XIN) = 20$ MHz, A/D converter stopped) Typ. 5 mA ($VCC = 3.0$ V, $f(XIN) = 10$ MHz, A/D converter stopped) Typ. 35 μ A ($VCC = 3.0$ V, wait mode, peripheral clock off) Typ. 0.7 μ A ($VCC = 3.0$ V, stop mode) |
| Flash Memory | Programming and erasure voltage | $VCC = 2.7$ to 5.5 V |
| | Programming and erasure endurance | 100 times |
| Operating Ambient Temperature | | -20 to 85°C |
| | | -40 to 85°C (D version) |
| | | -20 to 105°C (Y version) ⁽²⁾ |
| Package | | 20-pin molded-plastic LSSOP |
| | | 20-pin molded-plastic SDIP |
| | | 28-pin molded-plastic HWQFN |

NOTE:

1. I²C bus is a trademark of Koninklijke Philips Electronics N. V.
2. Please contact Renesas Technology sales offices for the Y version.

1.5 Pin Assignments

Figure 1.4 shows Pin Assignments for PLSP0020JB-A Package (Top View), Figure 1.5 shows Pin Assignments for PRDP0020BA-A Package (Top View) and Figure 1.6 shows Pin Assignments for PWQN0028KA-B Package (Top View).

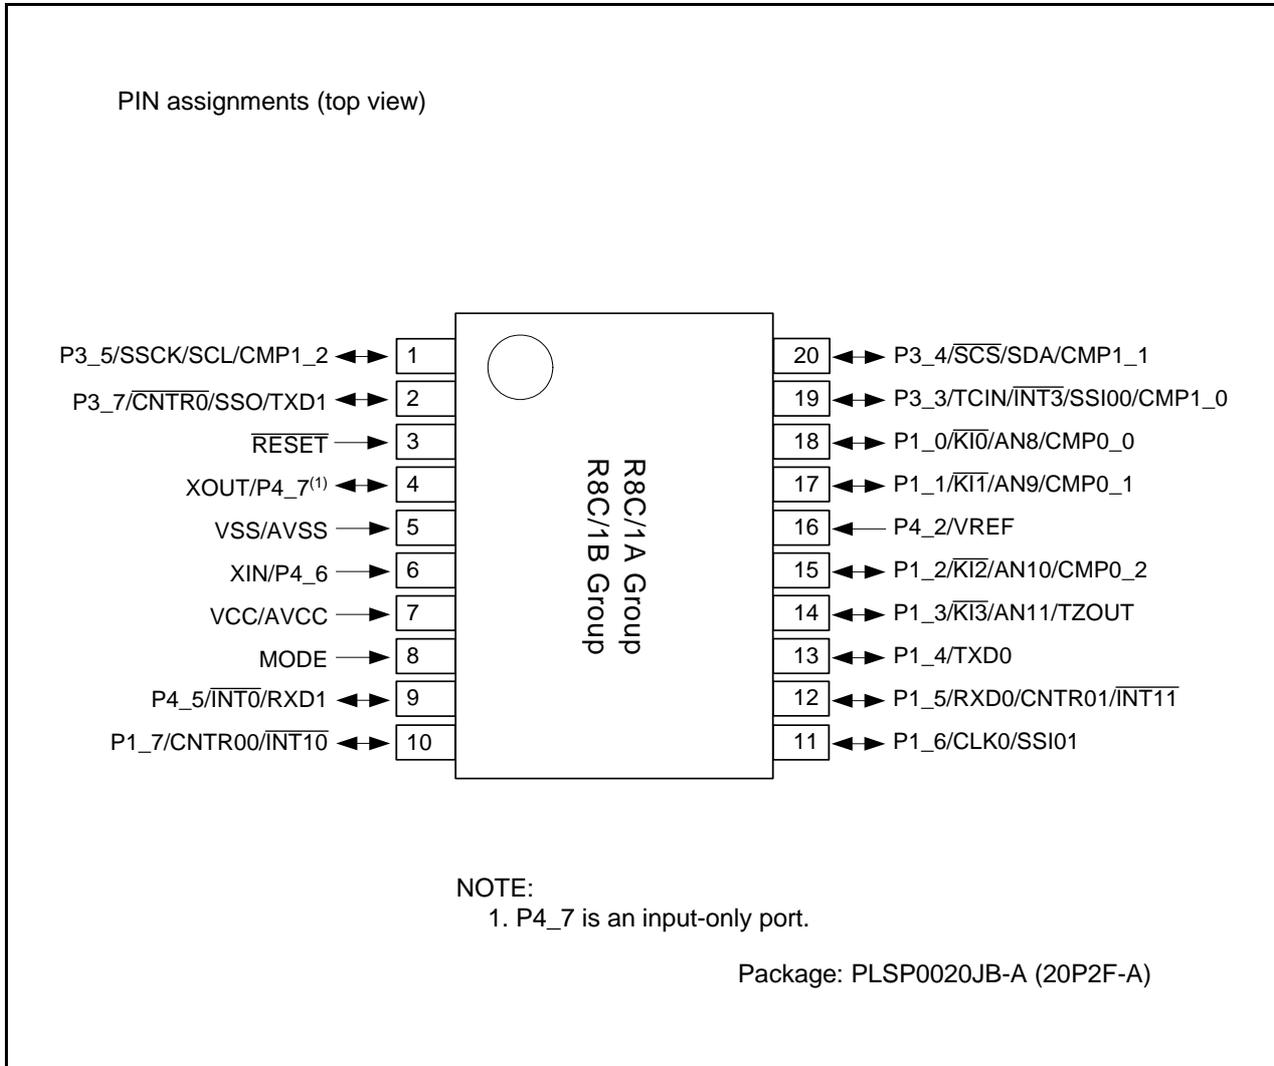

Figure 1.4 Pin Assignments for PLSP0020JB-A Package (Top View)

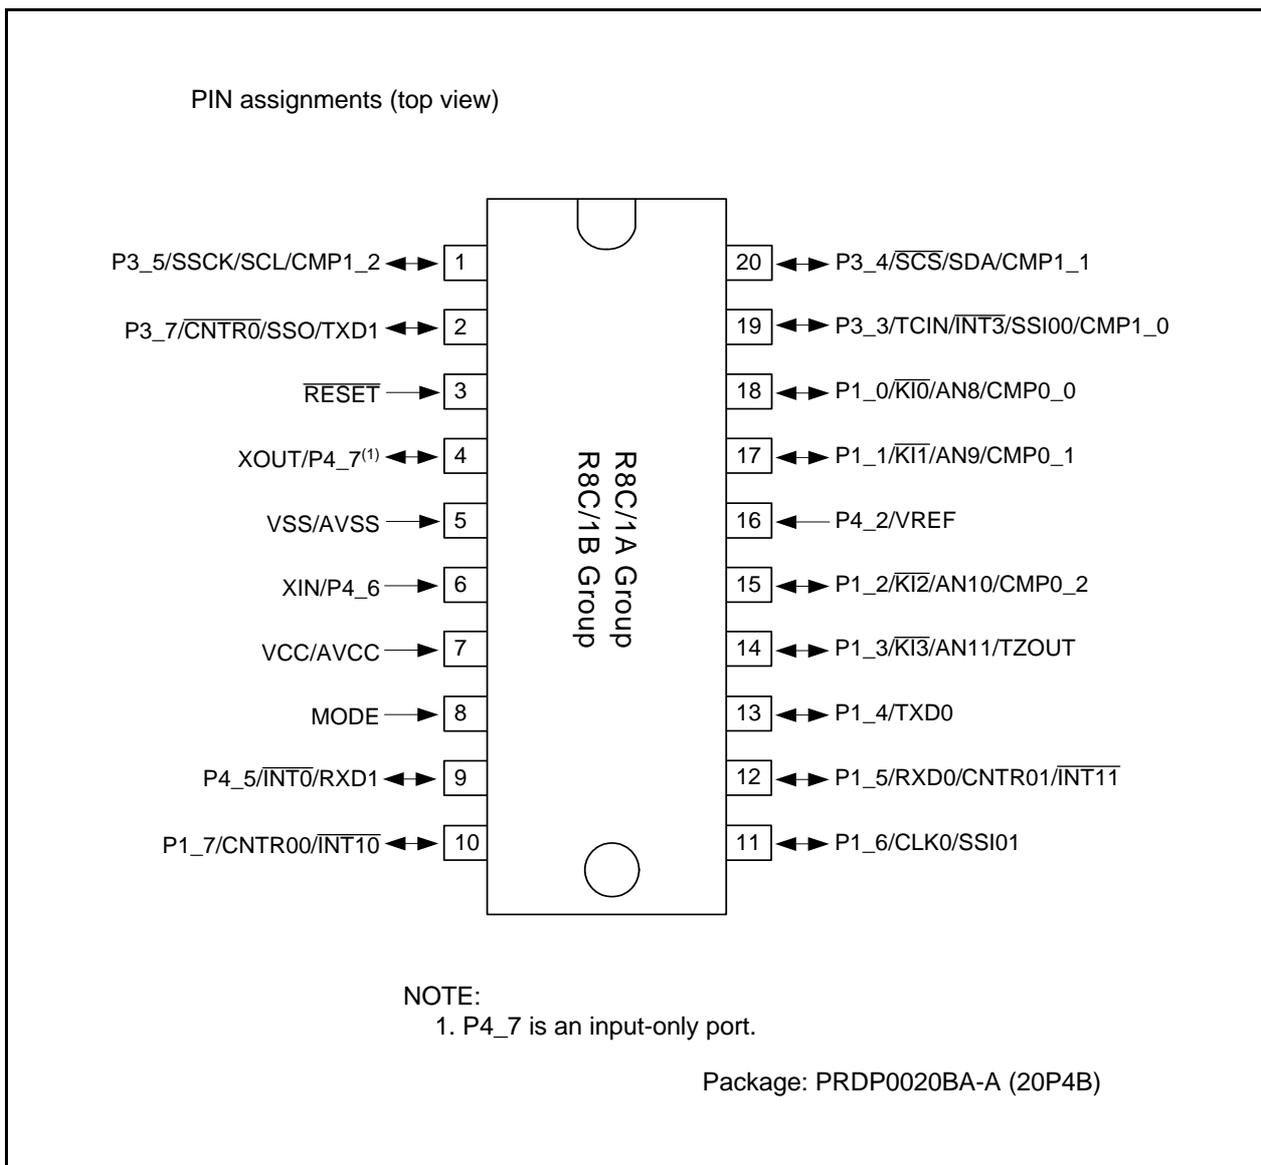

Figure 1.5 Pin Assignments for PRDP0020BA-A Package (Top View)

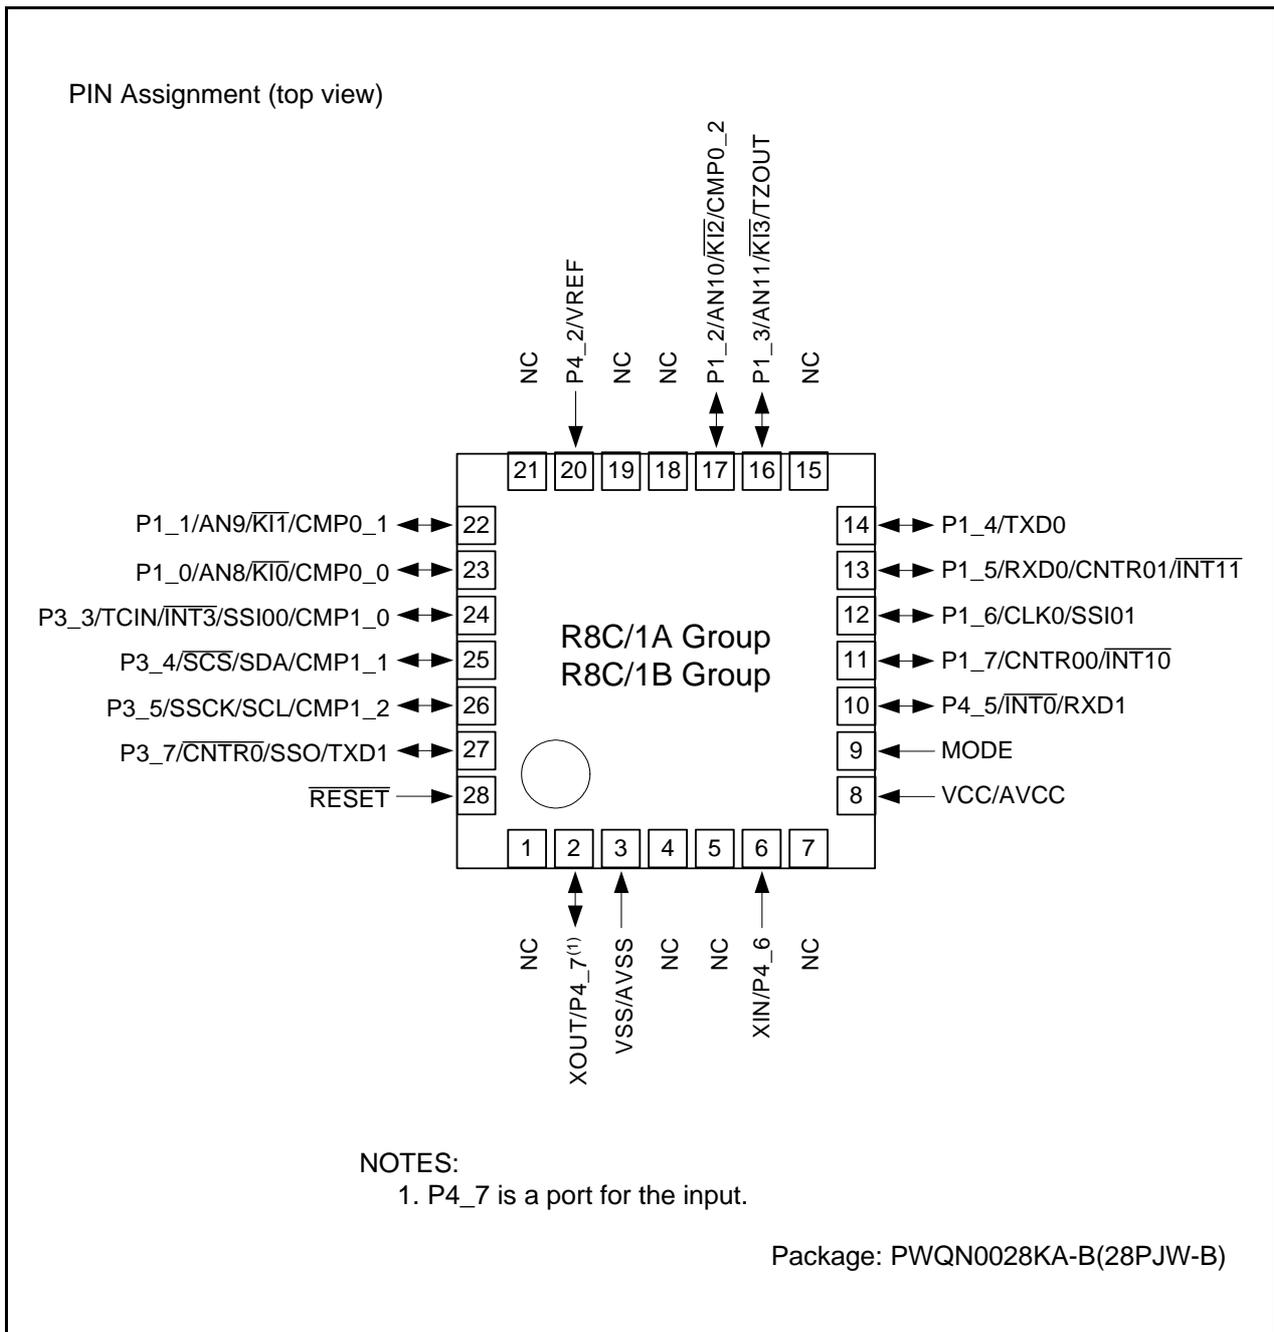

Figure 1.6 Pin Assignments for PWQN0028KA-B Package (Top View)

1.6 Pin Functions

Table 1.5 lists Pin Functions, Table 1.6 lists Pin Name Information by Pin Number of PLSP0020JB-A, PRDP0020BA-A Packages and Table 1.7 lists Pin Name Information by Pin Number of PWQN0028KA-B Package.

Table 1.5 Pin Functions

| Type | Symbol | I/O Type | Description |
|---|--|----------|---|
| Power Supply Input | VCC, VSS | I | Apply 2.7 V to 5.5 V to the VCC pin. Apply 0 V to the VSS pin. |
| Analog Power Supply Input | AVCC, AVSS | I | Power supply for the A/D converter Connect a capacitor between AVCC and AVSS. |
| Reset Input | RESET | I | Input "L" on this pin resets the MCU. |
| MODE | MODE | I | Connect this pin to VCC via a resistor. |
| Main Clock Input | XIN | I | These pins are provided for main clock generation circuit I/O. Connect a ceramic resonator or a crystal oscillator between the XIN and XOUT pins. To use an external clock, input it to the XIN pin and leave the XOUT pin open. |
| Main Clock Output | XOUT | O | |
| INT Interrupt | INT0, INT1, INT3 | I | INT interrupt input pins |
| Key Input Interrupt | KI0 to KI3 | I | Key input interrupt input pins |
| Timer X | CNTR0 | I/O | Timer X I/O pin |
| | CNTR0 | O | Timer X output pin |
| Timer Z | TZOUT | O | Timer Z output pin |
| Timer C | TCIN | I | Timer C input pin |
| | CMP0_0 to CMP0_2, CMP1_0 to CMP1_2 | O | Timer C output pins |
| Serial Interface | CLK0 | I/O | Transfer clock I/O pin |
| | RXD0, RXD1 | I | Serial data input pins |
| | TXD0, TXD1 | O | Serial data output pins |
| Clock synchronous serial I/O with chip select (SSU) | SSI00, SSI01 | I/O | Data I/O pin. |
| | SCS | I/O | Chip-select signal I/O pin |
| | SSCK | I/O | Clock I/O pin |
| | SSO | I/O | Data I/O pin |
| I ² C bus Interface | SCL | I/O | Clock I/O pin |
| | SDA | I/O | Data I/O pin |
| Reference Voltage Input | VREF | I | Reference voltage input pin to A/D converter |
| A/D Converter | AN8 to AN11 | I | Analog input pins to A/D converter |
| I/O Port | P1_0 to P1_7, P3_3 to P3_5, P3_7, P4_5 | I/O | CMOS I/O ports. Each port has an I/O select direction register, allowing each pin in the port to be directed for input or output individually. Any port set to input can be set to use a pull-up resistor or not by a program. P1_0 to P1_3 also function as LED drive ports. |
| Input Port | P4_2, P4_6, P4_7 | I | Input-only ports |

I: Input O: Output I/O: Input and output

2. Central Processing Unit (CPU)

Figure 2.1 shows the CPU Registers. The CPU contains 13 registers. R0, R1, R2, R3, A0, A1, and FB configure a register bank. There are two sets of register bank.

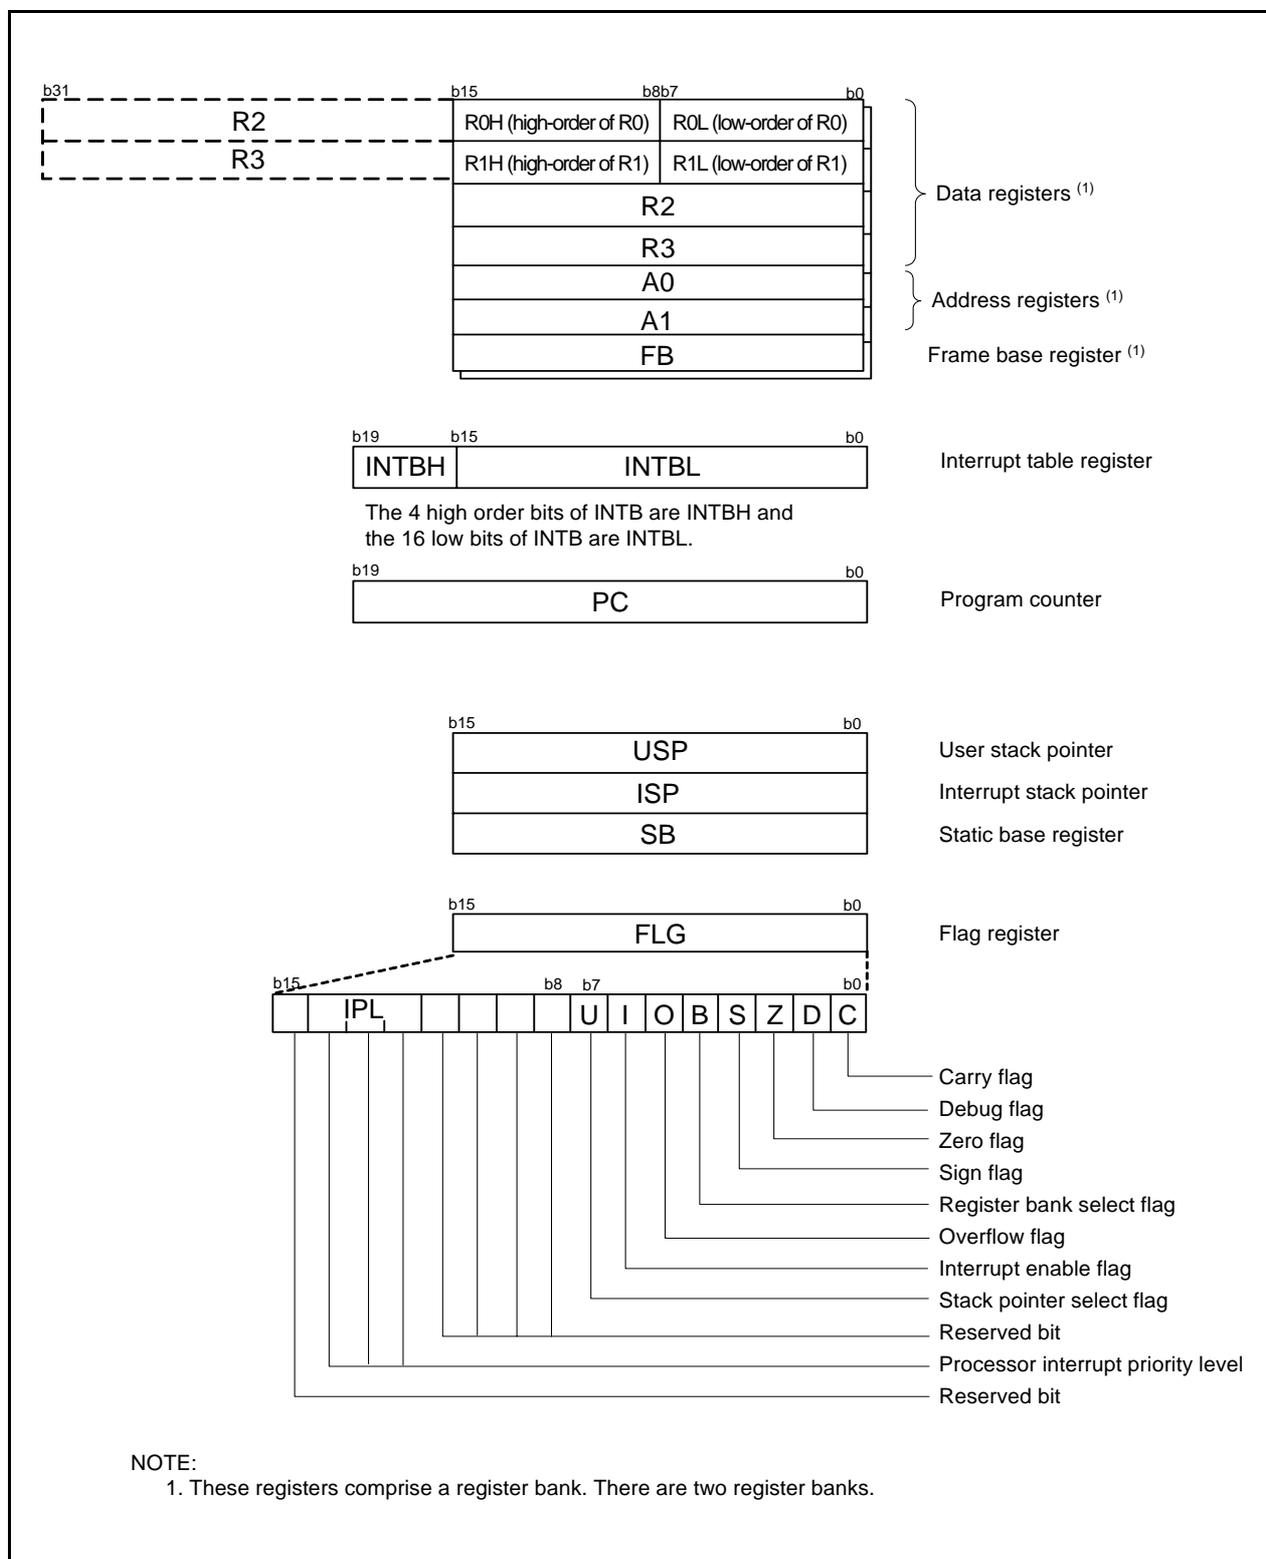

Figure 2.1 CPU Register

2.1 Data Registers (R0, R1, R2, and R3)

R0 is a 16-bit register for transfer, arithmetic, and logic operations. The same applies to R1 to R3. R0 can be split into high-order bits (R0H) and low-order bits (R0L) to be used separately as 8-bit data registers. R1H and R1L are analogous to R0H and R0L. R2 can be combined with R0 and used as a 32-bit data register (R2R0). R3R1 is analogous to R2R0.

2.2 Address Registers (A0 and A1)

A0 is a 16-bit register for address register indirect addressing and address register relative addressing. It is also used for transfer and arithmetic and logic operations. A1 is analogous to A0. A1 can be combined with A0 and used as a 32-bit address register (A1A0).

2.3 Frame Base Register (FB)

FB is a 16-bit register for FB relative addressing.

2.4 Interrupt Table Register (INTB)

INTB is a 20-bit register that indicates the start address of an interrupt vector table.

2.5 Program Counter (PC)

PC is 20 bits wide indicates the address of the next instruction to be executed.

2.6 User Stack Pointer (USP) and Interrupt Stack Pointer (ISP)

The stack pointer (SP), USP, and ISP, are each 16 bits wide. The U flag of FLG is used to switch between USP and ISP.

2.7 Static Base Register (SB)

SB is a 16-bit register for SB relative addressing.

2.8 Flag Register (FLG)

FLG is an 11-bit register indicating the CPU state.

2.8.1 Carry Flag (C)

The C flag retains a carry, borrow, or shift-out bits that have been generated by the arithmetic and logic unit.

2.8.2 Debug Flag (D)

The D flag is for debugging only. Set it to 0.

2.8.3 Zero Flag (Z)

The Z flag is set to 1 when an arithmetic operation results in 0; otherwise to 0.

2.8.4 Sign Flag (S)

The S flag is set to 1 when an arithmetic operation results in a negative value; otherwise to 0.

2.8.5 Register Bank Select Flag (B)

Register bank 0 is selected when the B flag is 0. Register bank 1 is selected when this flag is set to 1.

2.8.6 Overflow Flag (O)

The O flag is set to 1 when the operation results in an overflow; otherwise to 0.

2.8.7 Interrupt Enable Flag (I)

The I flag enables maskable interrupts.

Interrupts are disabled when the I flag is set to 0, and are enabled when the I flag is set to 1. The I flag is set to 0 when an interrupt request is acknowledged.

2.8.8 Stack Pointer Select Flag (U)

ISP is selected when the U flag is set to 0; USP is selected when the U flag is set to 1.

The U flag is set to 0 when a hardware interrupt request is acknowledged or the INT instruction of software interrupt numbers 0 to 31 is executed.

2.8.9 Processor Interrupt Priority Level (IPL)

IPL is 3 bits wide, assigns processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has higher priority than IPL, the interrupt is enabled.

2.8.10 Reserved Bit

If necessary, set to 0. When read, the content is undefined.

3. Memory

3.1 R8C/1A Group

Figure 3.1 is a Memory Map of R8C/1A Group. The R8C/1A Group has 1 Mbyte of address space from addresses 00000h to FFFFFh.

The internal ROM is allocated lower addresses, beginning with address 0C000h. For example, a 16-Kbyte internal ROM area is allocated addresses 0C000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal RAM is allocated higher addresses, beginning with address 00400h. For example, a 1-Kbyte internal RAM area is allocated addresses 00400h to 007FFh. The internal RAM is used not only for storing data but also for calling subroutines and as stacks when interrupt requests are acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated here. All addresses within the SFR, which have nothing allocated are reserved for future use and cannot be accessed by users.

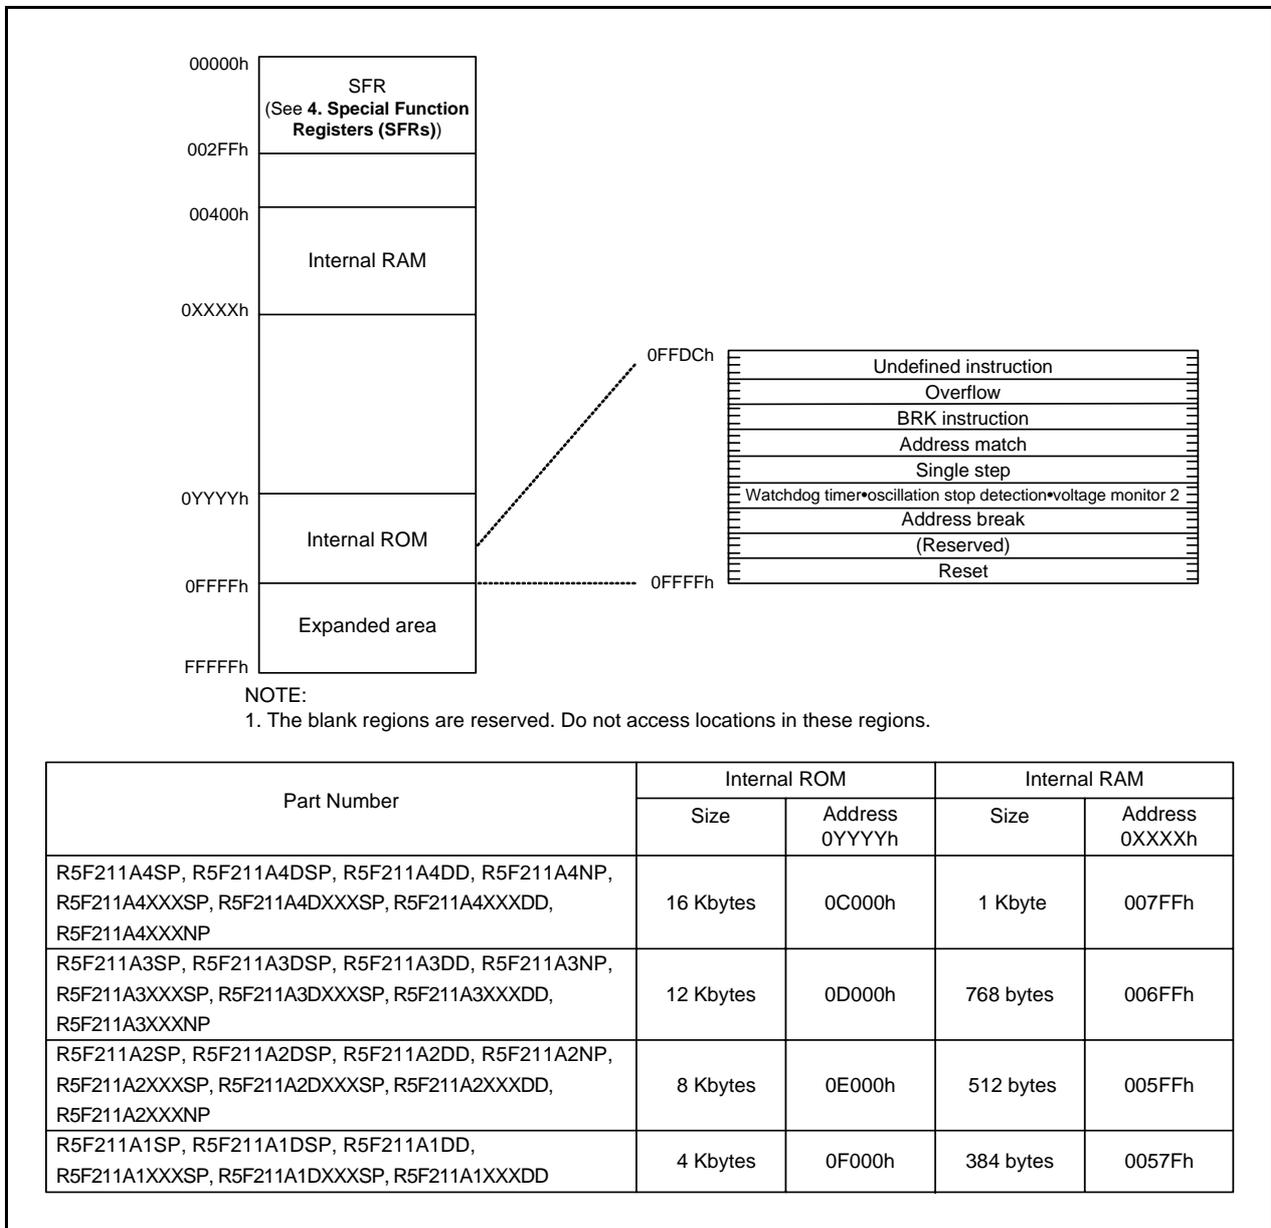

Figure 3.1 Memory Map of R8C/1A Group

3.2 R8C/1B Group

Figure 3.2 is a Memory Map of R8C/1B Group. The R8C/1B Group has 1 Mbyte of address space from addresses 00000h to FFFFFh.

The internal ROM (program ROM) is allocated lower addresses, beginning with address 0FFFFh. For example, a 16-Kbyte internal ROM area is allocated addresses 0C000h to 0FFFFh.

The fixed interrupt vector table is allocated addresses 0FFDCh to 0FFFFh. They store the starting address of each interrupt routine.

The internal ROM (data flash) is allocated addresses 02400h to 02BFFh.

The internal RAM is allocated higher addresses beginning with address 00400h. For example, a 1-Kbyte internal RAM area is allocated addresses 00400h to 007FFh. The internal RAM is used not only for storing data but also for calling subroutines and as stacks when interrupt requests are acknowledged.

Special function registers (SFRs) are allocated addresses 00000h to 002FFh. The peripheral function control registers are allocated here. All addresses within the SFR, which have nothing allocated are reserved for future use and cannot be accessed by users.

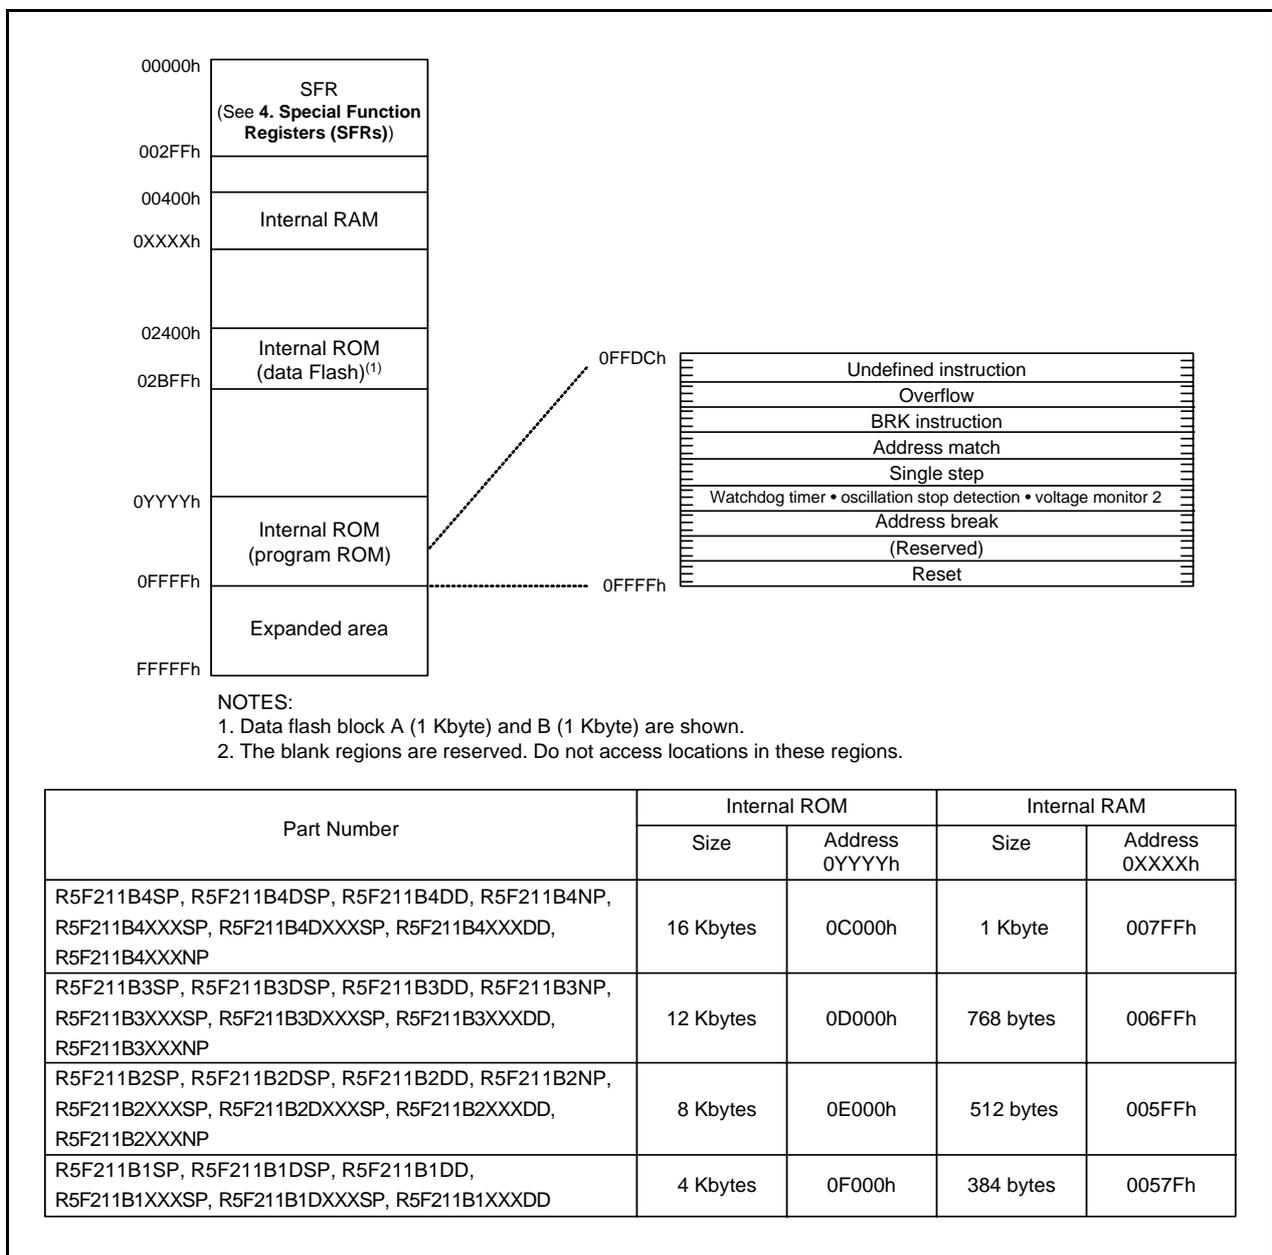

Figure 3.2 Memory Map of R8C/1B Group

4. Special Function Registers (SFRs)

An SFR (special function register) is a control register for a peripheral function. Tables 4.1 to 4.4 list the special function registers.

NOTES:

- Blank regions, 0100h to 01B2h and 01B8h to 02FFh are all reserved. Do not access locations in these regions.
- The OFS register cannot be changed by a user program. Use a flash programmer to write to it.

5. Electrical Characteristics

Please contact Renesas Technology sales offices for the electrical characteristics in the Y version ($T_{opr} = -20^{\circ}\text{C}$ to 105°C).

Table 5.1 Absolute Maximum Ratings

| Symbol | Parameter | Condition | Rated Value | Unit |
|------------------|-------------------------------|------------------------------------|-----------------------------------|------|
| V _{cc} | Supply voltage | V _{cc} = AV _{cc} | -0.3 to 6.5 | V |
| AV _{cc} | Analog supply voltage | V _{cc} = AV _{cc} | -0.3 to 6.5 | V |
| V _i | Input voltage | | -0.3 to V _{cc} +0.3 | V |
| V _o | Output voltage | | -0.3 to V _{cc} +0.3 | V |
| P _d | Power dissipation | T _{opr} = 25°C | 300 | mW |
| T _{opr} | Operating ambient temperature | | -20 to 85 / -40 to 85 (D version) | °C |
| T _{stg} | Storage temperature | | -65 to 150 | °C |

Table 5.2 Recommended Operating Conditions

| Symbol | Parameter | | Conditions | Standard | | | Unit | |
|-----------------------|--|---|---|--------------------|-----------------|--------------------|------|-----|
| | | | | Min. | Typ. | Max. | | |
| V _{cc} | Supply voltage | | | 2.7 | – | 5.5 | V | |
| AV _{cc} | Analog supply voltage | | | – | V _{cc} | – | V | |
| V _{ss} | Supply voltage | | | – | 0 | – | V | |
| AV _{ss} | Analog supply voltage | | | – | 0 | – | V | |
| V _{IH} | Input “H” voltage | | | 0.8V _{cc} | – | V _{cc} | V | |
| V _{IL} | Input “L” voltage | | | 0 | – | 0.2V _{cc} | V | |
| I _{OH(sum)} | Peak sum output “H” current | Sum of all pins I _{OH (peak)} | | – | – | -60 | mA | |
| I _{OH(peak)} | Peak output “H” current | | | – | – | -10 | mA | |
| I _{OH(avg)} | Average output “H” current | | | – | – | -5 | mA | |
| I _{OL(sum)} | Peak sum output “L” currents | Sum of all pins I _{OL (peak)} | | – | – | 60 | mA | |
| I _{OL(peak)} | Peak output “L” currents | Except P1_0 to P1_3 | | – | – | 10 | mA | |
| | | P1_0 to P1_3 | Drive capacity HIGH | – | – | 30 | mA | |
| | | | Drive capacity LOW | – | – | 10 | mA | |
| I _{OL(avg)} | Average output “L” current | Except P1_0 to P1_3 | | – | – | 5 | mA | |
| | | P1_0 to P1_3 | Drive capacity HIGH | – | – | 15 | mA | |
| | | | Drive capacity LOW | – | – | 5 | mA | |
| f _(XIN) | Main clock input oscillation frequency | | 3.0 V ≤ V _{cc} ≤ 5.5 V | 0 | – | 20 | MHz | |
| | | | 2.7 V ≤ V _{cc} < 3.0 V | 0 | – | 10 | MHz | |
| – | System clock | OCD2 = 0 Main clock selected | 3.0 V ≤ V _{cc} ≤ 5.5 V | 0 | – | 20 | MHz | |
| | | | 2.7 V ≤ V _{cc} < 3.0 V | 0 | – | 10 | MHz | |
| | | OCD2 = 1 On-chip oscillator clock selected | HRA01 = 0 Low-speed on-chip oscillator clock selected | – | 125 | – | – | kHz |
| | | | HRA01 = 1 High-speed on-chip oscillator clock selected | – | 8 | – | – | MHz |

NOTES:

- V_{cc} = 2.7 to 5.5 V at T_{opr} = -20 to 85 °C / -40 to 85 °C, unless otherwise specified.
- Typical values when average output current is 100 ms.

Table 5.3 A/D Converter Characteristics

| Symbol | Parameter | | Conditions | Standard | | | Unit |
|--------------|--|-------------------------|--|----------|------|-----------|---------------|
| | | | | Min. | Typ. | Max. | |
| – | Resolution | | $V_{ref} = V_{CC}$ | – | – | 10 | Bits |
| – | Absolute accuracy | 10-bit mode | $\phi_{AD} = 10 \text{ MHz}, V_{ref} = V_{CC} = 5.0 \text{ V}$ | – | – | ± 3 | LSB |
| | | 8-bit mode | $\phi_{AD} = 10 \text{ MHz}, V_{ref} = V_{CC} = 5.0 \text{ V}$ | – | – | ± 2 | LSB |
| | | 10-bit mode | $\phi_{AD} = 10 \text{ MHz}, V_{ref} = V_{CC} = 3.3 \text{ V}^{(3)}$ | – | – | ± 5 | LSB |
| | | 8-bit mode | $\phi_{AD} = 10 \text{ MHz}, V_{ref} = V_{CC} = 3.3 \text{ V}^{(3)}$ | – | – | ± 2 | LSB |
| R_{ladder} | Resistor ladder | | $V_{ref} = V_{CC}$ | 10 | – | 40 | $k\Omega$ |
| t_{conv} | Conversion time | 10-bit mode | $\phi_{AD} = 10 \text{ MHz}, V_{ref} = V_{CC} = 5.0 \text{ V}$ | 3.3 | – | – | μs |
| | | 8-bit mode | $\phi_{AD} = 10 \text{ MHz}, V_{ref} = V_{CC} = 5.0 \text{ V}$ | 2.8 | – | – | μs |
| V_{ref} | Reference voltage | | | 2.7 | – | V_{CC} | V |
| V_{IA} | Analog input voltage ⁽⁴⁾ | | | 0 | – | AV_{CC} | V |
| – | A/D operating clock frequency ⁽²⁾ | Without sample and hold | | 0.25 | – | 10 | MHz |
| | | With sample and hold | | 1 | – | 10 | MHz |

NOTES:

1. $V_{CC} = AV_{CC} = 2.7$ to 5.5 V at $T_{opr} = -20$ to $85 \text{ }^\circ\text{C}$ / -40 to $85 \text{ }^\circ\text{C}$, unless otherwise specified.
2. If f_1 exceeds 10 MHz , divide f_1 and ensure the A/D operating clock frequency (ϕ_{AD}) is 10 MHz or below.
3. If AV_{CC} is less than 4.2 V , divide f_1 and ensure the A/D operating clock frequency (ϕ_{AD}) is $f_1/2$ or below.
4. When the analog input voltage is over the reference voltage, the A/D conversion result will be $3FFh$ in 10-bit mode and FFh in 8-bit mode.

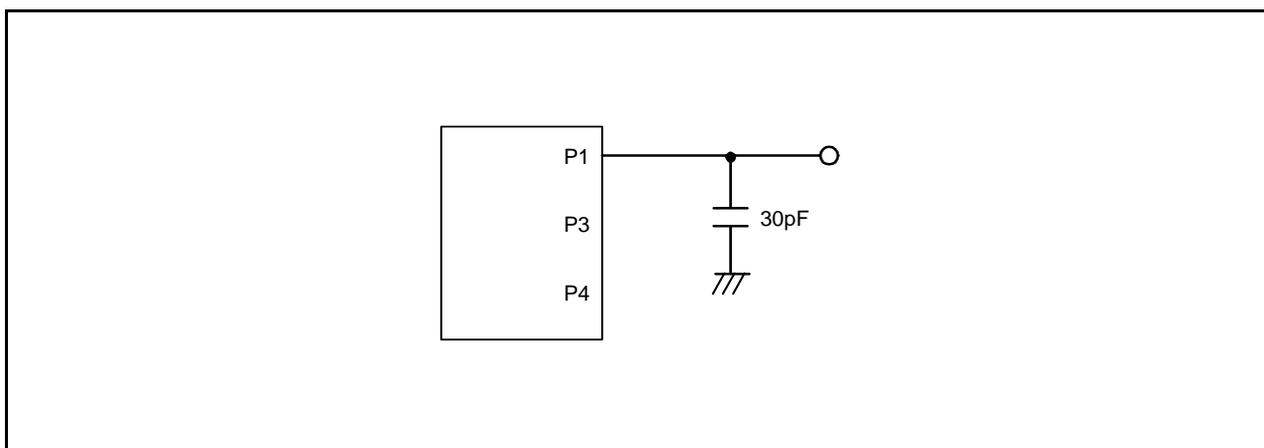

**Figure 5.1 Port P1, P3, and P4 Measurement Circuit**

Table 5.4 Flash Memory (Program ROM) Electrical Characteristics

| Symbol | Parameter | Conditions | Standard | | | Unit |
|-------------------------|---|-----------------------------|----------------------|------|----------------------------|-------|
| | | | Min. | Typ. | Max. | |
| – | Program/erase endurance ⁽²⁾ | R8C/1A Group | 100 ⁽³⁾ | – | – | times |
| | | R8C/1B Group | 1,000 ⁽³⁾ | – | – | times |
| – | Byte program time | | – | 50 | 400 | μs |
| – | Block erase time | | – | 0.4 | 9 | s |
| t _d (SR-SUS) | Time delay from suspend request until suspend | | – | – | 97+CPU clock × 6 cycles | μs |
| – | Interval from erase start/restart until following suspend request | | 650 | – | – | μs |
| – | Interval from program start/restart until following suspend request | | 0 | – | – | ns |
| – | Time from suspend until program/erase restart | | – | – | 3+CPU clock × 4 cycles | μs |
| – | Program, erase voltage | | 2.7 | – | 5.5 | V |
| – | Read voltage | | 2.7 | – | 5.5 | V |
| – | Program, erase temperature | | 0 | – | 60 | °C |
| – | Data hold time ⁽⁸⁾ | Ambient temperature = 55 °C | 20 | – | – | year |

NOTES:

- V_{CC} = 2.7 to 5.5 V at T_{opr} = 0 to 60 °C, unless otherwise specified.
- Definition of programming/erasure endurance
The programming and erasure endurance is defined on a per-block basis.
If the programming and erasure endurance is n (n = 100 or 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one. However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
- Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed).
- If emergency processing is required, a suspend request can be generated independent of this characteristic. In that case the normal time delay to suspend can be applied to the request. However, we recommend that a suspend request with an interval of less than 650 μs is only used once because, if the suspend state continues, erasure cannot operate and the incidence of erasure error rises.
- In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. In addition, averaging the number of erase operations between block A and block B can further reduce the effective number of rewrites. It is also advisable to retain data on the erase count of each block and limit the number of erase operations to a certain number.
- If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
- Customers desiring programming/erasure failure rate information should contact their Renesas technical support representative.
- The data hold time includes time that the power supply is off or the clock is not supplied.

Table 5.5 Flash Memory (Data flash Block A, Block B) Electrical Characteristics

| Symbol | Parameter | Conditions | Standard | | | Unit |
|------------|---|-----------------------------|-----------------------|------|----------------------------|-------|
| | | | Min. | Typ. | Max. | |
| – | Program/erase endurance ⁽²⁾ | | 10,000 ⁽³⁾ | – | – | times |
| – | Byte program time (Program/erase endurance ≤ 1,000 times) | | – | 50 | 400 | μs |
| – | Byte program time (Program/erase endurance > 1,000 times) | | – | 65 | – | μs |
| – | Block erase time (Program/erase endurance ≤ 1,000 times) | | – | 0.2 | 9 | s |
| – | Block erase time (Program/erase endurance > 1,000 times) | | – | 0.3 | – | s |
| td(SR-SUS) | Time Delay from suspend request until suspend | | – | – | 97+CPU clock x 6 cycles | μs |
| – | Interval from erase start/restart until following suspend request | | 650 | – | – | μs |
| – | Interval from program start/restart until following suspend request | | 0 | – | – | ns |
| – | Time from suspend until program/erase restart | | – | – | 3+CPU clock x 4 cycles | μs |
| – | Program, erase voltage | | 2.7 | – | 5.5 | V |
| – | Read voltage | | 2.7 | – | 5.5 | V |
| – | Program, erase temperature | | -20 ⁽⁸⁾ | – | 85 | °C |
| – | Data hold time ⁽⁹⁾ | Ambient temperature = 55 °C | 20 | – | – | year |

NOTES:

- V_{CC} = 2.7 to 5.5 V at T_{opr} = –20 to 85 °C / –40 to 85 °C, unless otherwise specified.
- Definition of programming/erasure endurance
The programming and erasure endurance is defined on a per-block basis.
If the programming and erasure endurance is n (n = 100 or 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one. However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
- Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed).
- If emergency processing is required, a suspend request can be generated independent of this characteristic. In that case the normal time delay to suspend can be applied to the request. However, we recommend that a suspend request with an interval of less than 650 μs is only used once because, if the suspend state continues, erasure cannot operate and the incidence of erasure error rises.
- In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. It is also advisable to retain data on the erase count of each block and limit the number of erase operations to a certain number.
- If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
- Customers desiring programming/erasure failure rate information should contact their Renesas technical support representative.
- 40 °C for D version.
- The data hold time includes time that the power supply is off or the clock is not supplied.

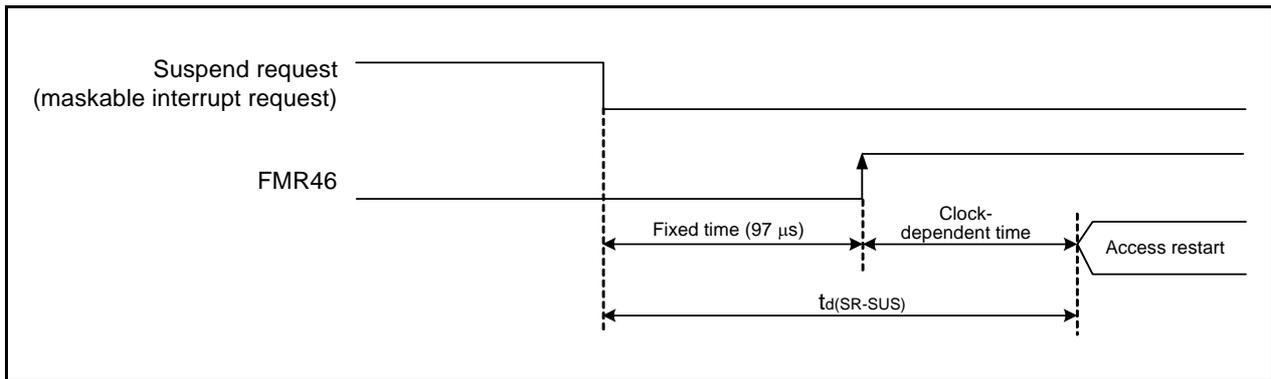

Figure 5.2 Transition Time to Suspend

Table 5.6 Voltage Detection 1 Circuit Electrical Characteristics

| Symbol | Parameter | Condition | Standard | | | Unit |
|---------------------|--|------------------------------------|----------|------|------|------|
| | | | Min. | Typ. | Max. | |
| V _{det1} | Voltage detection level ⁽³⁾ | | 2.70 | 2.85 | 3.00 | V |
| – | Voltage detection circuit self power consumption | VCA26 = 1, V _{CC} = 5.0 V | – | 600 | – | nA |
| t _{d(E-A)} | Waiting time until voltage detection circuit operation starts ⁽²⁾ | | – | – | 100 | μs |
| V _{ccmin} | MCU operating voltage minimum value | | 2.7 | – | – | V |

NOTES:

1. The measurement condition is V_{CC} = 2.7 V to 5.5 V and T_{opr} = -40°C to 85 °C.
2. Necessary time until the voltage detection circuit operates when setting to 1 again after setting the VCA26 bit in the VCA2 register to 0.
3. Ensure that V_{det2} > V_{det1}.

Table 5.7 Voltage Detection 2 Circuit Electrical Characteristics

| Symbol | Parameter | Condition | Standard | | | Unit |
|---------------------|--|------------------------------------|----------|------|------|------|
| | | | Min. | Typ. | Max. | |
| V _{det2} | Voltage detection level ⁽⁴⁾ | | 3.00 | 3.30 | 3.60 | V |
| – | Voltage monitor 2 interrupt request generation time ⁽²⁾ | | – | 40 | – | μs |
| – | Voltage detection circuit self power consumption | VCA27 = 1, V _{CC} = 5.0 V | – | 600 | – | nA |
| t _{d(E-A)} | Waiting time until voltage detection circuit operation starts ⁽³⁾ | | – | – | 100 | μs |

NOTES:

1. The measurement condition is V_{CC} = 2.7 V to 5.5 V and T_{opr} = -40°C to 85 °C.
2. Time until the voltage monitor 2 interrupt request is generated after the voltage passes V_{det2}.
3. Necessary time until the voltage detection circuit operates when setting to 1 again after setting the VCA27 bit in the VCA2 register to 0.
4. Ensure that V_{det2} > V_{det1}.

Table 5.8 Reset Circuit Electrical Characteristics (When Using Voltage Monitor 1 Reset)

| Symbol | Parameter | Condition | Standard | | | Unit |
|--|---|---|----------|------|-------------------|------|
| | | | Min. | Typ. | Max. | |
| V _{por2} | Power-on reset valid voltage | -20°C ≤ Topr ≤ 85°C | - | - | V _{det1} | V |
| t _w (V _{por2} -V _{det1}) | Supply voltage rising time when power-on reset is deasserted ⁽¹⁾ | -20°C ≤ Topr ≤ 85°C, t _w (por2) ≥ 0s ⁽³⁾ | - | - | 100 | ms |

NOTES:

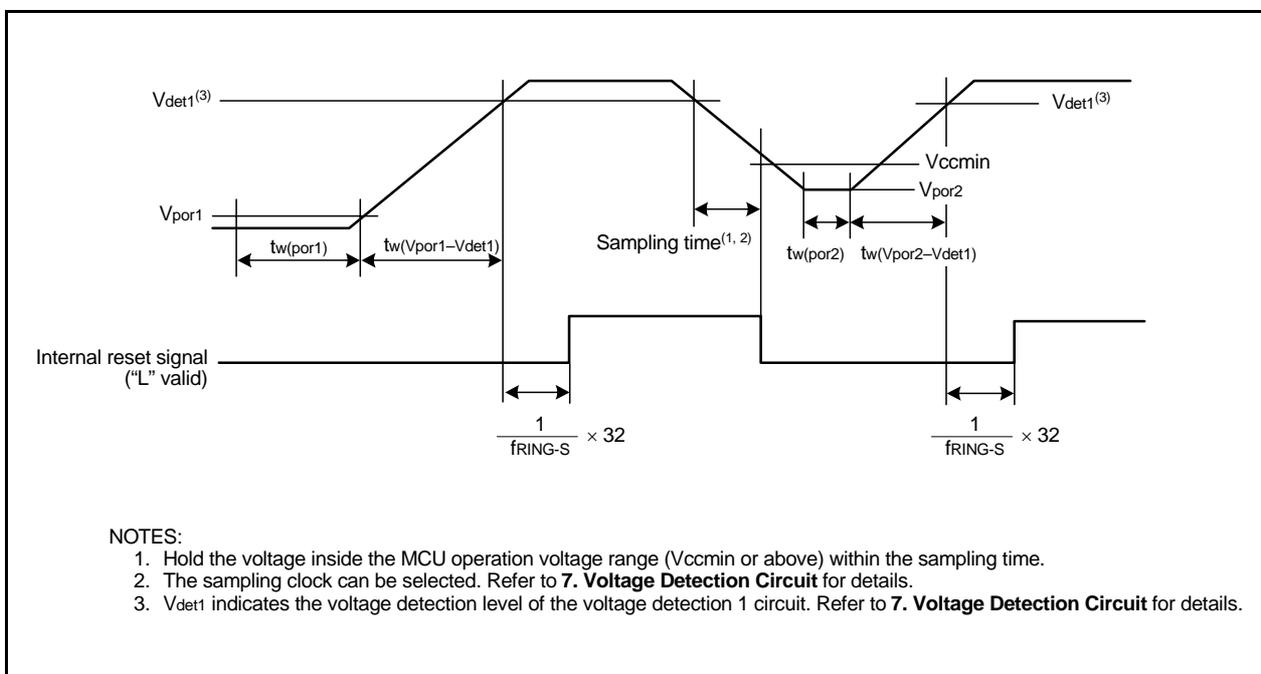

1. This condition is not applicable when using with V_{cc} ≥ 1.0 V.
2. When turning power on after the time to hold the external power below effective voltage (V_{por1}) exceeds 10 s, refer to **Table 5.9 Reset Circuit Electrical Characteristics (When Not Using Voltage Monitor 1 Reset)**.
3. t_w(por2) is the time to hold the external power below effective voltage (V_{por2}).

Table 5.9 Reset Circuit Electrical Characteristics (When Not Using Voltage Monitor 1 Reset)

| Symbol | Parameter | Condition | Standard | | | Unit |
|--|--|--|----------|------|------|------|
| | | | Min. | Typ. | Max. | |
| V _{por1} | Power-on reset valid voltage | -20°C ≤ Topr ≤ 85°C | - | - | 0.1 | V |
| t _w (V _{por1} -V _{det1}) | Supply voltage rising time when power-on reset is deasserted | 0°C ≤ Topr ≤ 85°C, t _w (por1) ≥ 10 s ⁽²⁾ | - | - | 100 | ms |
| t _w (V _{por1} -V _{det1}) | Supply voltage rising time when power-on reset is deasserted | -20°C ≤ Topr < 0°C, t _w (por1) ≥ 30 s ⁽²⁾ | - | - | 100 | ms |
| t _w (V _{por1} -V _{det1}) | Supply voltage rising time when power-on reset is deasserted | -20°C ≤ Topr < 0°C, t _w (por1) ≥ 10 s ⁽²⁾ | - | - | 1 | ms |
| t _w (V _{por1} -V _{det1}) | Supply voltage rising time when power-on reset is deasserted | 0°C ≤ Topr ≤ 85°C, t _w (por1) ≥ 1 s ⁽²⁾ | - | - | 0.5 | ms |

NOTES:

1. When not using voltage monitor 1, use with V_{cc} ≥ 2.7 V.
2. t_w(por1) is the time to hold the external power below effective voltage (V_{por1}).

NOTES:

1. Hold the voltage inside the MCU operation voltage range (V_{ccmin} or above) within the sampling time.
2. The sampling clock can be selected. Refer to **7. Voltage Detection Circuit** for details.
3. V_{det1} indicates the voltage detection level of the voltage detection 1 circuit. Refer to **7. Voltage Detection Circuit** for details.

Figure 5.3 Reset Circuit Electrical Characteristics

Table 5.10 High-Speed On-Chip Oscillator Circuit Electrical Characteristics

| Symbol | Parameter | Condition | Standard | | | Unit |
|--------|--|--|----------|------|------|------|
| | | | Min. | Typ. | Max. | |
| – | High-speed on-chip oscillator frequency when the reset is deasserted | $V_{CC} = 5.0 \text{ V}$, $T_{opr} = 25 \text{ }^\circ\text{C}$ | – | 8 | – | MHz |
| – | High-speed on-chip oscillator frequency temperature • supply voltage dependence ⁽²⁾ | 0 to +60 $^\circ\text{C}/5 \text{ V} \pm 5 \%$ ⁽³⁾ | 7.76 | – | 8.24 | MHz |
| | | -20 to +85 $^\circ\text{C}/2.7 \text{ to } 5.5 \text{ V}$ ⁽³⁾ | 7.68 | – | 8.32 | MHz |
| | | -40 to +85 $^\circ\text{C}/2.7 \text{ to } 5.5 \text{ V}$ ⁽³⁾ | 7.44 | – | 8.32 | MHz |

NOTES:

1. The measurement condition is $V_{CC} = 5.0 \text{ V}$ and $T_{opr} = 25 \text{ }^\circ\text{C}$.
2. Refer to **10.6.4 High-Speed On-Chip Oscillator Clock** for notes on high-speed on-chip oscillator clock.
3. The standard value shows when the HRA1 register is assumed as the value in shipping and the HRA2 register value is set to 00h.

Table 5.11 Power Supply Circuit Timing Characteristics

| Symbol | Parameter | Condition | Standard | | | Unit |
|--------------|---|-----------|----------|------|------|---------------|
| | | | Min. | Typ. | Max. | |
| $t_{d(P-R)}$ | Time for internal power supply stabilization during power-on ⁽²⁾ | | 1 | – | 2000 | μs |
| $t_{d(R-S)}$ | STOP exit time ⁽³⁾ | | – | – | 150 | μs |

NOTES:

1. The measurement condition is $V_{CC} = 2.7 \text{ to } 5.5 \text{ V}$ and $T_{opr} = 25 \text{ }^\circ\text{C}$.
2. Waiting time until the internal power supply generation circuit stabilizes during power-on.
3. Time until CPU clock supply starts after the interrupt is acknowledged to exit stop mode.

Notes:

1. This document is provided for reference purposes only so that Renesas customers may select the appropriate Renesas products for their use. Renesas neither makes warranties or representations with respect to the accuracy or completeness of the information contained in this document nor grants any license to any intellectual property rights or any other rights of Renesas or any third party with respect to the information in this document.
2. Renesas shall have no liability for damages or infringement of any intellectual property or other rights arising out of the use of any information in this document, including, but not limited to, product data, diagrams, charts, programs, algorithms, and application circuit examples.
3. You should not use the products or the technology described in this document for the purpose of military applications such as the development of weapons of mass destruction or for the purpose of any other military use. When exporting the products or technology described herein, you should follow the applicable export control laws and regulations, and procedures required by such laws and regulations.
4. All information included in this document such as product data, diagrams, charts, programs, algorithms, and application circuit examples, is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas products listed in this document, please confirm the latest product information with a Renesas sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas such as that disclosed through our website. (<http://www.renesas.com>)
5. Renesas has used reasonable care in compiling the information included in this document, but Renesas assumes no liability whatsoever for any damages incurred as a result of errors or omissions in the information included in this document.
6. When using or otherwise relying on the information in this document, you should evaluate the information in light of the total system before deciding about the applicability of such information to the intended application. Renesas makes no representations, warranties or guarantees regarding the suitability of its products for any particular application and specifically disclaims any liability arising out of the application and use of the information in this document or Renesas products.
7. With the exception of products specified by Renesas as suitable for automobile applications, Renesas products are not designed, manufactured or tested for applications or otherwise in systems the failure or malfunction of which may cause a direct threat to human life or create a risk of human injury or which require especially high quality and reliability such as safety systems, or equipment or systems for transportation and traffic, healthcare, combustion control, aerospace and aeronautics, nuclear power, or undersea communication transmission. If you are considering the use of our products for such purposes, please contact a Renesas sales office beforehand. Renesas shall have no liability for damages arising out of the uses set forth above.
8. Notwithstanding the preceding paragraph, you should not use Renesas products for the purposes listed below:
 - (1) artificial life support devices or systems
 - (2) surgical implantations
 - (3) healthcare intervention (e.g., excision, administration of medication, etc.)
 - (4) any other purposes that pose a direct threat to human lifeRenesas shall have no liability for damages arising out of the uses set forth in the above and purchasers who elect to use Renesas products in any of the foregoing applications shall indemnify and hold harmless Renesas Technology Corp., its affiliated companies and their officers, directors, and employees against any and all damages arising out of such applications.
9. You should use the products described herein within the range specified by Renesas, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas shall have no liability for malfunctions or damages arising out of the use of Renesas products beyond such specified ranges.
10. Although Renesas endeavors to improve the quality and reliability of its products, IC products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Please be sure to implement safety measures to guard against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other applicable measures. Among others, since the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
11. In case Renesas products listed in this document are detached from the products to which the Renesas products are attached or affixed, the risk of accident such as swallowing by infants and small children is very high. You should implement safety measures so that Renesas products may not be easily detached from your products. Renesas shall have no liability for damages arising out of such detachment.
12. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written approval from Renesas.
13. Please contact a Renesas sales office if you have any questions regarding the information contained in this document, Renesas semiconductor products, or if you have any other inquiries.

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
