Description

The MAAM-009320 is a variable gain amplifier with 26.5 dB of gain control at 2.14 GHz. It has good input IP3 performance over the full attenuation range. External matching components are used to set the center frequency and achieve the return loss performance. The analog control is accomplished through a single control pin of 0 to +3V.

The 4 mm PQFN package is RoHS compliant and compatible with reflow temperatures to 260°C. Applications include transceivers for cellular infrastructure.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 1A devices.
