Multilayer Varistors (MLVs)

for ESD and High Energy Transient Protection in Automotive Applications

www.epcos.com

What are multilayer varistors (MLVs)?

- MLVs are multilayer semiconductor ceramic components for ESD protection of safety-relevant data lines and bus systems and for high-energy transient protection (e.g. load dump and jump start) in automotive electronic devices.
- MLVs can replace semiconductor diodes.

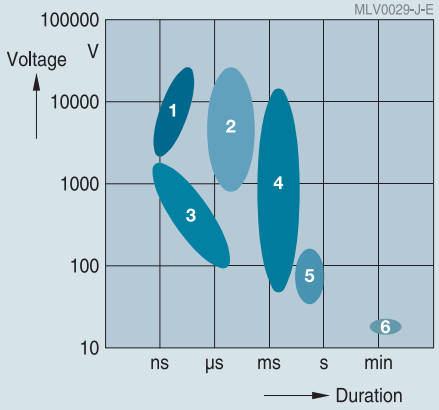
Benefits for customer applications

- Bidirectional protection for ESD and high energy transients
- Low capacitance types for bus systems
- Use of parasitic capacitance for RFI suppression and RF filtering (replacement of additional MLCC)
- High signal integrity due to low non-linearity → no signal distortion
- Use at temperatures up to 150 °C
- No temperature derating up to 125 °C/150 °C (depending on type)
- High energy handling capability
- Low parasitic inductance
- Low leakage current
- Fast response time < 0.5 ns

Qualification

- Reliability based on AEC-Q200, Rev. C
- ESD protection according to IEC61000-4-2 and ISO10605
- Jump start and load dump protection to ISO7637

Overview of transient overvoltages



1. Electrostatic discharge (ESD)
2. Surge (high energy transients µs)
3. Burst (fast transient single pulse ns)
4. Switched inductive loads
5. Load dump
6. Jump start

Selection Guide

Typical requirements for automotive applications

ESD protection.
Typical applications: Bus systems, car infotainment. Typical case sizes: 0603, 0805

- ESD specification (e.g. IEC, ISO, AEC, JEDEC, HBM, customer specification)
- Type of bus system (e.g. LIN, CAN, FlexRay) defines capacitance requirement on protection device
  - Special capacitance range (controlled capacitance, low capacitance, high-speed)
  - Enhanced temperature requirement (150 °C)
    - High temperature (HT) range

Load dump/jump start protection.
Typical application: battery line. Typical case sizes: 1210, 2220

- Load dump / jump start requirements (e.g. ISO 7637)
- Additional requirements (e.g. centralized or module protection)
  - AUTO range
  - Enhanced temperature requirement (150 °C)
    - AUTO high temperature range

Transient voltage/RFI suppression.
Typical application: DC motors. Typical case sizes: SR1 (1812), SR2 (2220), SR6 (1206)

- RFI suppression requirements:
  Noise suppression level (e.g. VDE 0879, part 3), capacitance value, frequency range
- Additional requirements (e.g. load dump, jump start, ISO 7637, JASO)
- Leaded transient voltage / RFI suppressors (SHCV) [1)]

Surge current protection.
Typical application: motors. Typical case sizes: 3225, 4032

- Additional requirements (e.g. load dump, jump start)
- SMD disk varistors AUTO range (CU AUTO) [1)]

[1)] For samples or further information please contact your EPCOS sales office.

Общество с ограниченной ответственностью «МосЧип» ИНН 7719860671 / КПП 771901001
Адрес: 105318, г.Москва, ул.Щербаковская д.3, офис 1107

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
