## 10 – 11.7 GHz Power Amplifier

### Product Overview

Qorvo's TGA2760-SM is a packaged X-band high power amplifier utilizing Qorvo's production GaAs pHEMT and GaN processes. The TGA2760-SM operates from 10 – 11.7 GHz and typically provides 16W saturated power with power-added efficiency of 36% and large signal gain 30 dB. Third-order intermodulation is better than -30 dBc at 3 dB backed off from Psat. Along with the higher performance, an additional feature is an integrated power detector allowing the user to accurately monitor the output power of the unit.

The TGA2760-SM is packaged in a small air-cavity surface mount package and matched to 50 ohms with integrated DC blocking capacitors on both RF I/O ports simplifying system integration.

Lead-free and RoHS compliant.

## Package Marking and Dimensions

Marking: Part Number – TGA2760-SM  
 Lot Code – MXXXXXXX

**Notes:**

1. All dimensions are in millimeters. Angles are in degrees.
2. This package is lead-free/RoHS-compliant with an embedded heat spreader, and the plating material on the leads is NiAu. It is compatible with both lead-free (maximum 260 °C reflow temperature) and tin-lead (maximum 245 °C reflow temperature) soldering processes.

PCB Mounting Pattern

Notes:

1. The pad pattern shown has been developed and tested for optimized assembly at Qorvo. The PCB land pattern has been developed to accommodate lead and package tolerances. Since surface mount processes vary from company to company, careful process development is recommended.
2. Ground vias are critical for the proper performance of this device. Vias should have a final plated thru diameter of .1524 mm (.006").
3. For best thermal performance, vias under the ground paddle should be copper filled.
