

Description

Electronic circuit protector type ESX10-TC is designed to ensure **selective** disconnection of DC 12 V load systems.

DC 12 V power supplies, which are widely used in industry today, will shut down the output in the event of an overload with the result that one faulty load in the system can lead to complete disconnection of all loads. As well as an unidentified failure this also means stoppage of the whole system.

Through **selective** disconnection the ESX10-TC responds much faster to overload or short circuit conditions than the switch-mode power supply. This is achieved by active current limitation. The ESX10-T limits the highest possible current to 1.3 to 1.8 times the selected rated current of the circuit protector. Thus it is possible to switch on **capacitive loads of up to 75,000 μ F**, but they are disconnected only in the event of an overload or short circuit.

For optimal alignment with the characteristics of the application the current rating of the ESX10-TC can be selected in fixed values from 1 A...10 A. Failure and status indication are provided by a multicolour LED and an integral short-circuit-proof status output. Remote operation is possible by means of a remote reset signal or a remote ON/OFF control signal. The manual ON/OFF button allows separate actuation of individual load circuits.

The ESX10-TC, with a width of only 12.5 mm, can be snapped onto symmetrical rails ensuring ease of installation and saving space in control cabinets.

Upon detection of overload or short circuit in the load circuit, the MOSFET of the load output will be blocked to interrupt the current flow. The load circuit can be re-activated via the remote electronic reset input, control input or manually by means of the ON/OFF button.

US patent number: US 6,490,141 B2

US patent number: US 8,237,311 B2

Features

- Selective load protection, electronic trip characteristics.
- Active current limitation for safe connection of capacitive loads up to 75,000 μ F and on overload/short circuit.
- Current ratings 1 A...10 A at DC 12 V.
- Reliable overload disconnection with $1.1 \times I_N$ plus, even with long load lines or small cable cross sections.
- Manual ON/OFF button (S1).
- Control input IN+ for remote ON/OFF signal (option).
- Electronic reset input RE (option).
- Clear status and failure indication through LED, status output SF.
- Integral fail-safe element adjusted to current rating.
- Width per unit only 12.5 mm.
- Rail mounting
- Ease of wiring through busbar LINE+ and 0 V.
- Additional versions with ATEX approval available.

Marking:  II 3G Ex nA IIB T4 Gc X

ESX10-TC...-E

Please observe separate operating instructions:

ESX10-TC

Technical data ($T_{\text{ambient}} = 25^\circ\text{C}$, operating voltage $U_S = \text{DC } 12\text{ V}$)

Operating data

Operating voltage U_S	DC 12 V (9...18 V)
Current rating I_N	fixed current ratings: 1 A, 2 A, 3 A, 4 A, 6 A, 10 A
Closed current I_0	ON condition: typically 15...20 mA
Status indication by means of	• multicolour LED: Green: unit is ON, power-MOSFET is switched on - status output SF ON, supplies +DC 12 V Orange: in the event of overload or short circuit until electronic disconnection Red: - unit electronically disconnected - load circuit/Power-MOSFET OFF - low voltage ($< 3.25\text{ V}$) - after switch-on until end of switch-on delay OFF: - manually switched off (S1 = OFF) or device is dead - undervoltage • status output SF (option) • ON/OFF condition of switch S1

Load circuit

Load output	Power-MOSFET switching output (high side switch)
Overload disconnection	typically $1.1 \times I_N$ ($1.05...1.35 \times I_N$)
Short-circuit current I_K	active current limitation (see table 1)
Trip time for electronic disconnection	see time/current characteristics typically 3 s at $I_{\text{Load}} > 1.1 \times I_N$ typically 50 ms...3 s at $I_{\text{Load}} > 1.8 \times I_N$ (or $1.5 \times I_N$)
Temperature disconnection	internal temperature monitoring with electronic disconnection
Low voltage monitoring load output	with hysteresis at voltage dips $< 500\text{ ms}$, no reset required: load "OFF" at $U_B < 3.2\text{ V}$
Starting delay t_{start}	typically 10 ms
Disconnection of load circuit	electronic disconnection
Free-wheeling circuit	external free-wheeling diode recommended with inductive load
Several load outputs must not be connected in parallel	

Technical data (T_{ambient} = 25 °C, operating voltage U_S = DC 12 V)

Status output SF	ESX10-TC-114/-124
Electrical data	plus-switching signal output, connects U _S to terminal 12 of module 17plus nominal data: DC 12 V/max. 0.2 A (short circuit proof) status output is internally connected to GND with a 10 kΩ resistor
Status OUT	ESX10-TC-114/-124 (signal status OUT), +12 V = S1 is ON, load output connected through 0V = S1 is ON, load output blocked and/or switch S1 is OFF red LED lighted
OFF condition	0 V level at status output when: - switch S1 is in ON position, but device is still in switch-on delay - switch S1 is OFF, or control signal OFF, device is switched off - no operating voltage U_S
Reset input RE	ESX10-TC-124
Electrical data	voltage: max. +DC 32 V high > DC 4.5 V ≤ DC 18 V low ≤ DC 2.5 V > 0 V power consumption typically 1.4 mA (+DC 12 V) min. pulse duration typically 10 ms
Reset signal RE (terminal 22)	The electronically blocked ESX10-TC-124 may remotely be reset via an external momentary switch due to the falling edge of a + DC 12 V pulse. A common reset signal can be applied to several devices simultaneously. Switched on devices remain unaffected.
Control input IN+	ESX10-TC-114
Electrical data	see reset input RE
Control signal IN+	+ 12 V level (HIGH): device will be switched (terminal 21) on by a remote ON/OFF signal 0 V level (LOW): device will be switched off by a remote ON/OFF signal
Switch S1 ON/OFF	unit can only be switched on with S1 if a HIGH level is applied to IN+

General data

Fail-safe element:	backup fuse for ESX10-T <u>not required</u> because of the integral redundant fail-safe element
--------------------	---

Terminals LINE+ / LOAD+ / 0V

screw terminals	M4
max. cable cross section	
flexible with wire end ferrule w/wo plastic sleeve	0.5 – 10 mm ²
multi-lead connection (2 identical cables)	
rigid/flexible	0.5 – 4 mm ²

wire stripping length	8 mm
tightening torque (EN 60934)	0.5 – 0.6 Nm

Housing material	moulded
Mounting	symmetrical rail to EN 50022-35x7.5
Ambient temperature	-25...+60 °C ¹⁾ (without condensation, see EN 60204-1) with condensation upon request ¹⁾ Ambient temperature range can differ depending on approvals

Technical data (T_{ambient} = 25 °C, operating voltage U_S = DC 12 V)

Storage temperature	-40...+70 °C
Humidity	96 hrs/95 % RH/40 °C to IEC 60068-2-78, test Cab. climate class 3K3 to EN 60721
Vibration	3 g, test to IEC 60068-2-6 test Fc
Degree of protection	housing: IP20 DIN 40050 terminals: IP20 DIN 40050
EMC (EMC directive, CE logo)	emission: EN 61000-6-3 susceptibility: EN 61000-6-2
Insulation co-ordination (IEC 60934)	0.5 kV/2 pollution degree 2 re-inforced insulation in operating area
Dielectric strength	max. DC 18 V (load circuit)
Insulation resistance (OFF condition)	n/a, only electronic disconnection
Approvals	CE-logo UL 2367, File # E306740, Solid State Overcurrent Protectors UL 508, File # E322549
Dimensions (W x H x D)	12.5 x 80 x 83 mm
Mass	approx. 65 g

Table 1: voltage drop, current limitation, max. load current

current rating I _N	typically voltage drop U _{ON} at I _N	active current limitation I _{Limit} (typically)	max. load current at 100% ON duty	
			T _a = 40 °C	T _a = 60 °C
1 A	80 mV	1.8 x I _N	1 A	1 A
2 A	130 mV	1.8 x I _N	2 A	2 A
3 A	80 mV	1.8 x I _N	3 A	3 A
4 A	100 mV	1.8 x I _N	4 A	4 A
6 A	130 mV	1.8 x I _N	6 A	6 A
10 A	150 mV	1.5 x I _N	10 A	9 A

Attention: when mounted side-by-side without convection the ESX10-T should not carry more than 80 % of its rated load with 100 % ON duty due to thermal effects.

Attention

Please note:

- The user should ensure that the cable cross sections of the relevant load circuit are suitable for the current rating of the ESX10-T used.
- Automatic start-up of machinery after shut down must be prevented (Machinery Directive 98/37/EG and EN 60204-1). In the event of a short circuit or overload the load circuit will be disconnected electronically by the ESX10-T.

Operating Temperature Code T5

- This equipment is suitable for use in Class I, Division 2, Groups A, B, C and D or non-hazardous locations only

WARNING:

- Exposure to some chemicals may degrade the sealing properties of materials used in the following device: relay

Sealant Material:

Generic Name: Modified diglycidyl ether of bisphenol A
Supplier: Fine Polymers Corporation
Type: Epi Fine 4616L-160PK

Casing Material:

Generic Name: Liquid Crystal Polymer
Supplier: Sumitomo Chemical
Type: E4008, E4009, or E6008

RECOMMENDATION:

- Periodically inspect the device named above for any degradation of properties and replace if degradation is found

WARNING – EXPLOSION HAZARD:

- Do not disconnect equipment unless power has been removed or the area is known to be non-hazardous
- Substitution of any components may impair suitability for Class I, Division 2

Time/Current characteristic curve ($T_A = 25^\circ\text{C}$)

*1) current limitation typically $1.8 \times I_N$
times rated current at $I_N = 0.5 \text{ A} \dots 6 \text{ A}$

current limitation typically $1.5 \times I_N$
times rated current at $I_N = 8 \text{ A}$ or 10 A

- The trip time is typically 3 s in the range between 1.1 and $1.8 \times I_N^{*1}$.
- Electronic current limitation occurs at typically $1.8 \times I_N^{*1}$ which means that under all overload conditions (independent of the power supply and the resistance of the load circuit) the max. overload before disconnection will not exceed $1.8 \times I_N^{*1}$ times the current rating. Trip time is between 100 ms and 3 sec (depending on overload or at short circuit).
- Without this current limitation a considerably higher overload current would flow in the event of an overload or short circuit.

Mounting examples for ESX10-TC

The ESX10-TC-DC 12 V features an integral power distribution system.

Mounting procedure:

Before wiring insert busbars into protector block.
Max. 10 insertion/removal cycles for busbars.

Recommendation:

Every 10 units busbars should be interrupted and fed in anew.

Table of lengths for busbars

(X 222 611 02 see accessories)

no. of units	2	3	4	5	6	7	8	9	10
Length of busbar [mm] ± 0.5 mm	22	34.5	47	59.5	72	84.5	97	109.5	122

Description

The ESX10-T features an integral power distribution system. The following wiring modes are possible with various pluggable current busbars:

- LINE +DC 12 V
- 0 V

Caution: The electronic devices ESX10-T require a 0 V connection

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
