

## Discrete Output Light Grid in Robust Aluminum Housing

## F3ET2

The F3ET2 light grids provide reliable area monitoring in robust housing. The M12, 5-pin connectors and optical synchronization between transmitter and receiver allow for fast and simple installation without special requirements.

- Optical synchronization for reliable operation without additional wiring
- Robust aluminum housing
- NPN/PNP and Light-on / Dark-on selectable
- Brackets included with Light Grids

## Ordering Information

| Sensor Type                                                                                        | Detection Area (mm) | Pitch | Sensing Distance | Beams | Connection Method                                                                             | Output* | Model          |

Operation

The F3ET light grid features optical synchronization. This function is provided by the upper beam located on the opposite side of the connector (see illustration on the right). During operation this beam must always be kept free (unblocked). Otherwise it will result in a longer response frequency of the light grid.

Indicator LEDs

For functions of indicator LEDs please refer to the tables below:

Status of Receiver is displayed by 5 LEDs:

| Disposition of indicator | Name of indicator | Color  |
|--------------------------|-------------------|--------|
|                          | POWER             | Green  |
|                          | RUN               | Yellow |
|                          | FREE              | Green  |
|                          | BREAK             | Red    |
|                          | STATUS            | Yellow |

Status of Transmitter is displayed by 5 LEDs:

| Disposition of indicator | Name of indicator | Color  |
|--------------------------|-------------------|--------|
|                          | POWER             | Green  |
|                          | STATUS 1          | Yellow |
|                          | RANGE             | Green  |
|                          | Not used          |        |
|                          | STATUS 2          | Yellow |

Selector Switches

Operation mode and distance setting can be changed by selector switches. To access selector switches, unscrew the end cap of the receiver unit:

Transmitter

| Dip-SW           | Status | Function      |
|------------------|--------|---------------|
| 1, 2, 3, 4, 7, 8 | OFF    | Not USED      |
|                  | ON     | Not USED      |
| 5                | OFF    | FAR (Default) |
|                  | ON     | NEAR          |

Receiver

| Dip-SW        | Status | Function                |
|---------------|--------|-------------------------|
| 1, 4, 5, 7, 8 | OFF    | Not USED                |
|               | ON     | Not USED                |
| 2             | OFF    | PNP operation (Default) |
|               | ON     | NPN operation           |
| 3             | OFF    | Dark on (Default)       |
|               | ON     | Light on                |

Note: Selector setting must only be carried out when the receiver is NOT connected to the power supply. There are two lines of dip switches in each transmitter and receiver. The settings must be done for both lines.

Mounting

Mounting accessories

The F3ET2 system is mechanically installed by using the T-slots on the two sides or the back-side of the housing. Use the movable bolts, washers, spacers and nuts to attach the mounting brackets as shown in the picture

Note: Shipments contain a different quantity of brackets, depending on the length of the light grid. Longer light grids contain a higher number of brackets, following the rule of one bracket every 400 mm.

Additional mounting rigidity

It is recommended that the distance between the mounting brackets is 400 mm or less for optimum performance of the F3ET2 system.

Mechanical Mounting

Please mount the light grids in proper alignment as shown in the pictures below by using the brackets provided with the light grids.

If several light grids are installed close to each other, interference of the light grids must be avoided. In this case the assembly should be carried out as follows:

## Precautions

### ⚠ WARNING

**The F3ET multi-beam photoelectric sensor is not a safety component for ensuring the safety of people which is defined in EC directive (2006/42/EC) or by any other regulations or standards.**

### Power Supply Voltage and

#### Output Load Power Supply Voltage

Do not connect an AC power supply to the Sensor. If AC power (100 VAC or more) is supplied to the Sensor, it may be damaged, explode or burn. Make sure that the power supply to the Sensor is within the rated voltage range. If a voltage exceeding the rated voltage range is supplied to the Sensor, it may explode or burn.

### Operating Environment

Do not use the sensor in locations with explosive or flammable gas. Make sure that the product is operated in accordance with IP65 standards.

Do not subject the sensor to excessive shock when mounting.

When you use the sensor in the vicinity of an inverter motor, be sure to connect the protective earth ground wire of the motor to earth. Failure to ground the motor may result in malfunction of the sensor.

### Mounting the Sensor

Do not strike the sensor with a hammer or any other tool during the installation of the Sensor.

### Cleaning

Never use paint thinners or other organic solvents to clean the surface of the product

### M12 Connector

Always turn OFF the power supply to the sensor before connecting or disconnecting the metal connector. Hold the connector cover to connect or disconnect it.

Secure the connector cover by hand. Do not use pliers; otherwise the connector may be damaged.

If the connector is not connected securely, it may be disconnected by vibration or the proper degree of protection of the sensor may not be maintained.

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
