## Evaluation Board/Kit and Development Tool Important Notice

---

1. This evaluation board/kit or development tool is designed for use for engineering evaluation, demonstration, or development purposes only. Do not use it for other purposes. It is not intended to meet the requirements of design for finished products.
2. This evaluation board/kit or development tool is intended for use by an electronics engineer and is not a consumer product. The user should use it properly and in a safe manner. Seiko Epson does not assume any responsibility or liability of any kind of damage and/or fire caused by the use of it. The user should cease to use it when any abnormal issue occurs even during proper and safe use.
3. The part used for this evaluation board/kit or development tool may be changed without any notice.

## NOTICE

---

# 1 Introduction

This manual describes the setup and operation of the S5U13746P00C100 Evaluation Board. The evaluation board is designed as an evaluation platform for the S1D13746 TV-Out Mobile Graphics Engine.

The S5U13746P00C100 evaluation board can be used with many other native platforms via the host connectors which provide the appropriate signals to support a variety of CPUs. The S5U13746P00C100 evaluation board can also connect to the S5U13U00P00C100 USB Adapter board so that it can be used with a laptop or desktop computer, via USB 2.0.

This user manual is updated as appropriate. Please check the Epson Research and Development Website at [www.erd.epson.com](http://www.erd.epson.com) for the latest revision of this document before beginning any development.

We appreciate your comments on our documentation. Please contact us via email at [documentation@erd.epson.com](mailto:documentation@erd.epson.com).

## 2 Features

The S5U13746P00C100 Evaluation Board includes the following features:

- 100-pin PFBGA S1D13746 TV-Out Mobile Graphics Engine
- Headers for connecting to various Host Bus Interfaces or a Parallel RGB Interface
- Headers for connecting to the S5U13U00P00C100 USB Adapter board
- Output connectors for analog composite video and S-video
- Header for GPIO pins
- On-board 27MHz oscillator
- 14-pin DIP socket (if a clock different than 27MHz must be used)
- 3.3V input power
- On-board voltage regulators

### 3 Installation and Configuration

The S5U13746P00C100 evaluation board incorporates a DIP switch, jumpers, and 0 ohm resistors which allow it to be used with a variety of different configurations.

#### 3.1 Configuration DIP Switch

The S1D13746 has configuration inputs (CNF[3:0]) and a 4-position DIP switch (SW1) which is used to configure the S1D13746 for any of the Host Bus Interfaces. The following figure shows the location of DIP switch SW1 on the S5U13746P00C100.

Figure 3-1: Configuration DIP Switch (SW1) Location

All S1D13746 configuration inputs (CNF[3:0]) are fully configurable using DIP switch SW1 as described below.

Table 3-1: Summary of Power-On/Reset Options

SDU13746P00C100 SW1-[4:1] Config	S1D13746 CNF[3:0] Config	Power-On/Reset State	
		1 (ON)	0 (OFF)
SW1-[2:1]	CNF[1:0]	00b	3-Wire Serial Host Interface with Parallel RGB Interface
		01b	8-Bit Intel 80
		10b	SPI Host Interface with Parallel RGB Interface
		11b	16-Bit Intel 80
SW1-[3]	CNF2	Crystal used as input clock	Oscillator used as input clock
SW1-[4]	CNF3	Reset Filter = 5us	Reset Filter = 43ns

= Required settings when using S5U13U00P00C100 USB Adapter board (SW1-[4:1] = 1011b)

## 3.2 Configuration Jumpers

The S5U13746P00C100 has 7 jumpers which configure various board settings. The jumper positions for each function are shown below.

Jumper	Function	Position 1-2	Position 2-3	No Jumper
JP1	COREVDD	Normal	—	COREVDD current measurement
JP2	PLLVD	Normal	—	PLLVD current measurement
JP3	DACVCC	Normal	—	DACVCC current measurement
JP4	IOVDD	Normal	—	IOVDD current measurement
JP5	SIOVDD	Normal	—	SIOVDD current measurement
JP6	IOVDD Source	H2 connector, pin 32	3.3VDD	—
JP7	SIOVDD Source	H3 connector, pin 4	3.3VDD	—

 = Required settings when using S5U13U00P00C100 USB Adapter board

### JP1-JP5 - S1D13746 Power Supplies

JP1-JP5 can be used to measure the current consumption of each S1D13746 power supply. When the jumper is at position 1-2, normal operation is selected. When no jumper is installed, the current consumption for each power supply can be measured by connecting an ammeter to pins 1 and 2 of the jumper.

The jumper associated to each power supply is as follows:

- JP1 for COREVDD
- JP2 for PLLVDD
- JP3 for DACVCC
- JP4 for IOVDD
- JP5 for SIOVDD

**Note**

Because the crystal input of the S1D13746 is not used on this board, there is no provision to measure OSCVDD current consumption.

Figure 3-2: Configuration Jumper Locations (JP1-JP5)

### JP6 - IOVDD Source

JP6 is used to select the source for the IOVDD supply voltage.

When the jumper is at position 1-2, the IOVDD voltage must be provided to H2 connector, pin 32.

When the jumper is at position 2-3, the IOVDD voltage is provided by the 3.3V power supply of the board.

Figure 3-3: Configuration Jumper Location (JP6)

### JP7 - SIOVDD Source

JP7 is used to select the source for the SIOVDD supply voltage.

When the jumper is at position 1-2, the SIOVDD voltage must be provided to H3 connector, pin 4.

When the jumper is at position 2-3, the SIOVDD voltage is provided by the 3.3V power supply of the board.

Figure 3-4: Configuration Jumper Location (JP7)

## 4 Technical Description

### 4.1 Power

#### 4.1.1 Power Requirements

The S5U13746P00C100 evaluation board requires an external regulated power supply (3.3V / 0.5A). The power is supplied to the evaluation board through pin 5 of the P2 header, or pin 2 of the H3 header.

The green LED '3.3V Power' is turned on when 3.3V power is applied to the board.

#### 4.1.2 Voltage Regulators

The S5U13746P00C100 evaluation board has on-board linear regulators to provide the 1.5V power and 3.0V power required by the S1D13746 TV-Out Mobile Graphics Engine.

#### 4.1.3 S1D13746 Power

The S1D13746 TV Out Mobile Graphics Engine requires 1.5V, 3.0V and 1.65-3.6V power supplies.

1.5V power is provided by the on-board linear voltage regulator. It is used for COREVDD and PLLVDD.

3.0V power is provided by the on-board linear voltage regulator. It is used for DACVCC.

3.3V power is provided by the external power supply. It is used for OSCVDD (even if the internal oscillator is not used, power must be provided to the OSCVDD pin).

IOVDD can be in the range 1.65-3.6V. IOVDD is connected to 3.3V when JP6 is in 2-3 position. If it is desired to have a different voltage for IOVDD, set JP6 in the 1-2 position and connect the desired supply to pin 32 of connector H2.

##### **Note**

If IOVDD voltage is less than 3.0V, an oscillator working at the selected IOVDD voltage must be used.

SIOVDD can be in the range 1.65-3.6V. SIOVDD is connected to 3.3V when JP7 is in 2-3 position. If it is desired to have a different voltage for SIOVDD, set JP7 in the 1-2 position and connect the desired supply to pin 4 of connector H3.

OSCVDD is connected directly to 3.3V.

## 4.2 Clocks

The clock for the S1D13746 chip is provided by a 27MHz oscillator.

The board has the footprint for a second oscillator, Y2, with a DIP14 footprint. This can be used if a different clock frequency must be used for the S1D13746 chip.

To use the Y2 oscillator, an oscillator must be populated in the Y2 footprint. Then remove R11 (33 ohm resistor, size 0402) to cut the output of Y1 and populate R13 with a 33 ohm resistor, size 0402, to connect the output of Y2 to the CLKI input of the S1D13746 chip.

### Note

If the board is configured for IOVDD voltage below 3.0V, an oscillator working at the selected IOVDD voltage must be used as Y2. The on-board 27MHz oscillator is not specified to work below a 3.0V supply voltage.

The S1D13746 chip can use a crystal to provide the clock, but this feature is not used on the board.

The S1D13746 chip can output the input clock on the CLKOUT pin depending on the state of the CLKOUTEN input. Both these signals are available on the H1 connector: CLKOUT on pin 1 of H1 connector and CLKOUTEN on pin 4 of H1 connector. On the board the CLKOUTEN pin is pulled down which disables the CLKOUT signal.

## 4.3 Reset

The S1D13746 chip on the S5U13746P00C100 evaluation board can be reset using a push-button, or via an active low reset signal from the host development platform (pin 10 on the H3 connector).

## 4.4 Power Save

The S1D13746 chip has an input called PWRSVE that will enable (when high) or disable (when low) the power save mode. This signal is available on pin 10 of the H1 connector. On the board the PWRSVE pin is pulled down which means power save mode is controlled only by the S1D13746 register setting.

## 4.5 Host Interface

### 4.5.1 Direct Host Bus Interface Support

The S1D13746 TV-Out Mobile Graphics Engine supports several host bus interfaces. For detailed S1D13746 pin mapping, refer to the *S1D13746 Hardware Functional Specification*, document number X74B-A-001-xx.

All S1D13746 host interface pins are available on connectors H2 and H3 which allow the S5U13746P00C100 evaluation board to be connected to a variety of development platforms.

The S1D13746 supports the Parallel RGB interface. All the signals used by the Parallel RGB interface are grouped on the H2 connector. All the Parallel RGB interface signals must match the IOVDD voltage level of the S1D13746 chip.

When the S1D13746 is configured for the Parallel RGB interface, it is controlled by the host through a serial interface (3-wire or SPI). All the host serial interface signals are available on the H3 connector. The serial interface signals must match the SIOVDD voltage level of the S1D13746 chip.

The following diagram shows the location of the host bus connectors H2 and H3. H2 is a 0.1x0.1" 40-pin header (20x2) and H3 is a 0.1x0.1" 12-pin header (6x2).

Figure 4-1: Host Bus Connector Locations (H2 and H3)

For the pinout of connectors H2 and H3, see “Schematic Diagrams” on page 21.

#### 4.5.2 Connecting to the Epson S5U13U00P00C100 USB Adapter Board

The S5U13746P00C100 evaluation board is designed to connect to a S5U13U00P00C100 USB Adapter Board. The USB adapter board provides a simple connection to any computer via a USB 2.0 connection. The S5U13746P00C100 directly connects to the adapter board through connectors P1 and P2.

The USB adapter board also supplies the 3.3V power required by the S5U13746P00C100. IOVDD and SIOVDD should be selected to be 3.3V and both JP6 and JP7 should be in the 2-3 position.

## 4.6 TV Output

The S1D13746 chip can output a S-Video TV signal or a Composite Video signal. The S5U13746P00C100 evaluation board includes a standard TV composite video connector and a standard S-Video connector.

The S-Video output use 2 separate outputs for the luminance and chrominance signals. The TV image quality is much higher when using S-Video output. The composite output uses only one output for the complete TV signal.

The S5U13746P00C100 board design includes an external TV output filter for each of the 2 analog outputs, as described in the *S1D13746 Hardware Functional Specification*, document number X74B-A-001-xx.

The filter for the luminance or composite video signals consists of C52, C53, C54, and L6. To bypass the filter, remove resistors R41 and R42 (0 ohm resistors) and populate resistors R38 and R39 with 0 ohm resistors, size 0402. For circuit configuration, refer to “Schematic Diagrams” on page 21.

The filter for the chrominance signal consists of C49, C50, C51, and L5. To bypass the filter, remove resistors R33 and R34 (0 ohm resistors) and populate resistors R29 and R30 with 0 ohm resistors, size 0402. For circuit configuration, refer to “Schematic Diagrams” on page 21.

By default, the S1D13746 DAC is configured to use internal VREF. For further information, refer to the *S1D13746 Hardware Functional Specification*, document number X74A-A-001-xx. If an external VREF must be used, then a 1.23V reference must be provided to TP1 (the VREF test point on the board).

The following diagram shows the location of the TV out connectors.

Figure 4-2: TV Out Connectors Locations (CN1, CN2)

## 4.7 GPIO Connections

The S1D13746 chip has 8 GPIO pins. All the GPIO pins are routed to the H1 connector. However, the H1 connector is not populated on the S5U13746P00C100 evaluation board.

Figure 4-3: H1 Connector Location

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
