Modular PLC series 135

OMRON

Modular PLC series

CJ₁

Sliceable Solutions

The family of CJ1 CPUs range from very small CPUs for simple sequence control to powerful and fast models that offer total machine control which can handle up to 2560 I/O points.

This enables yout to modularize or 'slice' your machine into logical sections without changing PLC series.

You don't even need to consider where to slice the machine: any I/O units can be mounted on any CPU, enabling you to distribute all the function you need to, wherever you need them. This reduces the number of different modules you have to keep in stock. And no matter how complex your machine becomes, there's always a CPU and a combination of I/Os to match your needs. It's the ultimate in machine sliceability and scalability!

New features in this edition

• All CPUs (Ver.3.0) Function Block programming in IEC 61131-3 Structured Text, and pre-tested Omron Function Block

Libraries to reduce machine development time.

• CJ1H-CPU67H The ultimate high-capacity CPU in the CJ1 range

CJ1M-CPU1□-ETN CPUs with integrated Ethernet port
 CJ1W-PD022 Low-end DC power supply unit

• CJ1W- CL) Digital and analog I/O units with screwless terminal blocks.

CJ1W-(P)TS
 Temperature input units, from simple non-isolated to fast high-resolution models.

CJ1W-SCU□1-V1 Gateway function for easy linking of various communication networks.
 CJ1W-CORT21 Gateway function for easy linking of various communication networks.

Compact, fast and flexible. The CJ1-series offers the ultimate in scaleability and seamless communication. A wide variation of models to handle essentially any type of machine control. Build the perfect CJ1-series PLC for your application.

The CJ1H, CJ1G, and CJ1M are compatible for memory allocations, programming instructions, and I/O Units. Compatibility simplifies reusing designs from large-scale applications to small-scale applications. Select from the range of CJ-series CPU Units including a

Select from the range of CJ-series CPU Units including a lineup of low-end models with 160 I/O points and 5 Ksteps for use in even smaller machines.

<u>NEW</u> The CJ1H-CPU67H delivers control on an even larger scale.

Downsize machines and control cabinets – fits anywhere.

Super Compact: Only 90 mm High and 65 mm Deep, with I/O Units from 20 mm in width.

With a height of only 90 mm, CJ1-series PLCs fit between narrow ducts along with other components.

CPU UnitsCJ1M-CPU11/12/13

At only 31 mm wide, the CPU Units provide an RS-232C port in addition to a peripheral port. A CF memory card interface is also built in. I/O Units Only 20 mm Wide

32-point Unit CompoBus/S Master Unit

Minimum width with 20 mm space-saving I/O Units

Output

Description:

Minimum width with 20 mm space-saving I/O Units

Output

Description:

Minimum width with 20 mm space-saving I/O Units

● I/O Units Only 31 mm Wide

Double-head Temperature Control Unit (4 control loops)

High-density Units for greater downsizing

High-density Units for greater downsizing and integrated control functions

Fast

Reduce cycle Time and Increase Productivity with Higher Machine Speed.

High speed, from input through processing to output, for better application performance.

● Top-of-the-Line CJ1-series PLC: Executes 38-Kstep program in **1 ms** (with basic instructions only)

LD or OUT instruction is executed in 20 ns

Application Examples

Replace High-speed Microcomputer Boards with PLCs.

Although previously microcomputer boards were used where processing speeds below 1 ms were required, the CJ1-series PLCs can now take this role, AND provide scalability, and easier debugging and maintenance.

Replace Two PLCs Used to Increase Processing Speed with One CJ1-series PLC.

Although previously two PLCs were somtetimes used to enable reading short pulses, the CJ1-series PLCs can now take this role too.

Seamless message communications across eight levels (%) of component, controller, and information networks.

The CJ Series is suitable for equipment ranging from small to large scale, making it equally convenient for building systems for essentially any machine size.

Use SPMA (Single Port Multi Access) to Transfer Ladder Programs, NS-series PT Screen Data, and Memory Card Data without Connecting to a Personal Computer.

Screen data can be transferred from the NS-Designer via the PLC to an NS-series PT connected to the PLC either serially or through the network. The CX-Programmer can be used to monitor ladder programs or transfer them via an NS-series PT to the PLC connected to an NS-series PT either serially or through the network.

- NS-series PT: System Ver. 3.0 or higher NS-Designer: Ver. 3.0 or higher
- CX-Programmer: Ver. 3.1 or higher
- PLC CJ1H/CJ1G-CPU□□ H/CJ1M-CPU□□: Lot No. 030201 or later

Scalable Distribute functionality to where you need it.

Any unit fits any CPU.

Eliminating the backplane enables more flexible combinations.

Configurable memory allocation allows for easy machine variations. Adding or removing units does not mean you need to change your PLC program.

When modifying the system, I/O capacity can be added without changing I/O word allocations using words reserved through CX-Programmer.

I/O words are reserved knowing there is a possibility of Units being added here.

No backplane means you can distribute the I/O units over several blocks to reduce rack width.

Select the right units for your application

Controller Link Unit

Easier Maintenance with Memory Cards

Memory Cards

Easily change programs using Memory Cards.

Compact flash cards are used, enabling the Memory Cards to be shipped or mailed for speedy action even with offshore sites.

Handle as Windows Files from a Personal Computer.

User programs, parameters, I/O memory, names (including I/O comments), and rung comments can be handled as files, enabling standardization of programs and initial setting data for each system.

Advantages in Using Windows Files

The Memory Card contains a compact flash card enabling programs to be written without a PLC. A PC card slot, available on many notebook computers, can be used instead of a Programming Device.

Log production conditions, inspection data, and other valuable information.

Eliminates the need for an onsite computer for a low-cost system that requires little space.

Backup is Simple.

Backup data for the entire PLC, including DeviceNet Units, Serial Communications Units, and other CPU Bus Units can be saved or read to a Memory Card. As a result, the same operation as that using ROM can be achieved using a Memory Card.

PLC Operation Can Be Switched by Changing the Memory Card.

When the power is turned ON, the file in the Memory Card can be automatically transferred to the CPU Unit. As a result, the same operation as that using ROM can be achieved using a Memory Card.

Built-in Flash Memory (Standard Feature)

Battery-free Operation Using Flash Memory

When the user program or parameter area data is transferred to the CPU Unit, it is automatically backed up in flash memory in the CPU Unit. (The flash memory data is automatically restored to the working memory in the CPU Unit when the power supply is turned ON.) This enables battery-free

operation without using a Memory Card.

Reduce Maintenance Unit Stocks

The CJ1-series PLCs can be used for anything from small-scale to large-scale applications, helping to reduce the quantity of maintenance Units stocked for unexpected troubles or system expansion.

Software Compatibility with CS1-series PLCs

CJ-series architecture is 100% compatible with the CS-Series. User programs and other software resources can be shared to make standardizing software easier for all levels of the system.

Built-in Comment Memory (Unit version 3.0 or later and CX-Programmer Ver. 5.0 or higher are required.)

Comment memory is now provided in the CPU Unit. This enables comments for the CJ1M and other PLCs to be stored without a Memory Card.

When downloading projects, the Memory Card, EM file memory, or comment memory (in the CPU Unit's flash memory) can be selected as the transfer destination for I/O comments, symbol names, rung comments, and other data. This enables data such as I/O comments, symbol names, and rung comments to be stored in the CPU Unit's internal comment memory when a Memory Card or EM file memory are both not available.

64 KB: Equivalent to the contents of EM bank 1

Comment memory capacity	CJ1M			CJ1G				CJ1H		
	CPU□1	CPU□2	CPU□3	CPU42H	CPU43H	CPU44H	CPU45H	CPU65H	CPU66H	CPU67H
Program indices	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	128 KB	128 KB
Comments	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	128 KB	128 KB
Symbol tables	64 KB	64 KB	64 KB	64 KB	64 KB	64 KB	128 KB	128 KB	128 KB	128 KB

The comments can be stored in either of three locations: a) Memory Card, b) EM file memory, or c) Comment memory (added with this unit version). Select the location to store the comments in the user settings.

Greater Connectability with Component Products, with FB Compatibility (Ladder Programming/Structured Text) More Attractive to Use with Greater Development Efficiency and Maintainability

Function Block (Unit version 3.0 or later, and CX-Programmer Ver. 5.0 or higher are required.)

FB (Ladder Programming/Structured Text) Compatibility with all CS/CJ-series Models

Ladder Programming Language Example

Structured Text Example

OMRON FB Library

The OMRON FB library provides function blocks for setting SPs, reading PVs, and reading/writing RUN/STOP status and other Temperature Controller parameters. The programmer simply pastes function blocks from the OMRON FB Library into the ladder program. The desired functions can be utilized simply by inputting the Temperature Controller unit number and address.

What Is the OMRON FB Library?

The OMRON FB Library is a set of functional objects for ladder programming for OMRON CS/CJ-series PLCs. By incorporating the OMRON function blocks provided by OMRON into a ladder program, the program interface for different control devices is easily completed. This reduces the number of working hours required for program development and, at the same time, improves product quality through standardization.

The Structured Text (ST) Language Enables Trigonometric Functions and Other Arithmetic Processes

In addition to ladder programming, function block logic can be written in ST, which conforms to IEC61131-3. With ST, arithmetic processing is also possible, including processing of absolute values, square roots, logarithms, and trigonometric functions (SIN, COS, and TAN). Processing difficult to achieve in ladder programs becomes easy to write.

Recovery Possible by Uploading Function Blocks from Working PLC

Programs with function blocks can be uploaded from CPU Units, just like normal programs, without the need for additional memory such as a Memory Card.

Truly Seamless Incorporation of OMRON Components and Other **Devices into Networks**

Serial Gateway NEW CPU Units with Ver. 3.0 or later Serial Communications Units with Ver. 1.2 or later

When the CPU Unit (Ver. 3.0 or later) or Serial Communications Board or Serial

Communications Unit (Ver. 1.2 or later) receives a FINS command containing a CompoWay/F command (See note 1.) via network or serial communications, the command is automatically converted to a protocol suitable for the message and forwarded using serial communications.

- CompoWay/F (See note 2.)
- Host Link FINS (Possible only with Serial Communications Boards or Serial Communications Units Ver. 1.2 or later)

FINS network

Note 1: FINS

Abbreviation for Factory Interface Network Service. A command system for message services common to OMRON networks. FINS commands can be sent across up to 8 network levels, including serial communications paths using a serial gateway. (Possible only with CS/CJseries CPU Unit Ver. 2.0 or later.)

Note 2: CompoWay/F

CompoWay/F is an integrated communications protocol used for OMRON general-purpose serial communications. It is used by Temperature Controllers, Digital Panel Meters, Timer/Counters, Smart Sensors, Cam Positioners, Safety Controllers, etc. (as of July 2004)

Serial Gateway System (Reference)

When CompoWay/F commands are enclosed in FINS commands and sent to Serial Communications Boards or Serial Communications Units (Ver. 1.2) or serial ports on CPU Unit Ver. 3.0. the enclosed CompoWay/F command is retrieved using a Serial Gateway Function and sent as a CompoWay/F command.

Setting Parameters and Monitoring CompoWay/Fcompatible OMRON Temperature Controllers in a Furnace System

Example

Remote Maintenance and Monitoring of a PLC on a Trolley in an Automated Warehouse

Note: Supported by Serial Communications Units only.

Use PLC Links for exclusive control on PCB carrier loaders and unloaders, or to exchange temperature and time information on conveyor ovens.

Data links can be created between up to nine CJ1M PLCs with up to 10 words each using the built-in RS-232C ports. RS-422A Adapters (CJ1W-CIF11) can be used to easily convert between RS-232C and RS-422A.

Achieve More Flexible, More Precise Machines with Pulse I/O Control

Built-in Pulse I/O

Pulse Outputs (CJ1M-CPU21/22/23)

Two Pulse Outputs at 100 kHz

■ Origin Searches (ORG Instruction)

- Origin searches are possible with one ORG instruction.
- Even with servomotors, a differential-phase counter reset output minimizes position deviations for origin searches.

■ Positioning with Trapezoidal Acceleration/Deceleration (PLS2 Instruction)

 \bullet Fast startup times (the time from instruction execution to start of pulse output): 46 µs minimum, 70 µs for trapezoidal acceleration/deceleration.

■ Interrupt Feeding (ACC and PLS2 Instructions)

■ Changing Target Position during Positioning (PLS2 and PLS2 Instructions)

High-precision Variable Duty Ratio (PWM output) Specify a duty ratio in 0.1% units. (Unit Ver. 2.0 or later)

High-speed Counter Inputs (CJ1M-CPU21/22/23)

Two counter inputs, either single-phase, 100 kHz, or differential phases, 50 kHz

■ High-speed Counter in Linear Mode

■ High-speed Counter in Ring Mode

High-speed line-driver inputs for either single-phase, 100 kHz, or differential phases, 50 kHz, can be input. (For 24 V DC: Single-phase, 60 kHz, or differential phases, 30 kHz)

■ High-speed Counter Frequency (Speed) Measurements

For example, in rotational speed measurements in inspection applications or tact-time speed displays for conveyors, the speed can be monitored by counting pulses without using a special speed calculation device.

The present value can be monitored during high-speed counter input by using the PRV instruction.

Measure Revolution Data (Unit Ver. 2.0 or later)
High-speed counter input pulses can be converted to rotational speed (or total number of revolutions) using the new PRV2(883) instruction.

Interrupt Inputs (CJ1M-CPU21/22/23)

Use these inputs for either four interrupt inputs or four high-speed inputs (with a minimum pulse width of 30 μ s).

Use Five or More Interrupt Inputs, or Use High-speed Inputs for CPU Units Other Than the CJ1M-CPU21/22/23

Interrupt Input Units with 16 points and High-speed Input Units with 16 points can be used with any of the CJ1-series CPU Units to add high-speed input or interrupt input capabilities to CPU Units that do not support built-in pulse I/O. High-speed Input Units read pulse signals with a minimum pulse width of 50 μs , and Interrupt Input Units feature an interrupt response time of 370 μs .

A Complete Lineup to mix-and-match for your application.

Note: HMC-172/372/672 Memory Cards cannot be used with CS1G-CPU —H, CS1H-CPU —H, CJ1G-CPU —H, or CJ1H-CPU —H CPU Units prior to Lot No. 02108 (manufactured prior to January 8, 2002, nor with NS-7-series PTs prior to Lot. No. 0852 (manufactured prior to May 8, 2002). Check lot numbers before ordering.

Note: Most units with 18-point front connector are available with screw terminals, or with screwless terminal block. Units with screwless terminal block have (SL) added to the model code.

CJ1M-CPU11 CJ1M-CPU11-ETN	160 bits (No Expansion Rack)	5 kSteps					
CJ1M-CPU23	640 bits (Only 1 Expansion Rack)	20 kSteps					Inputs: 10 Outputs: 6
CJ1M-CPU22	320 bits (No Expansion Rack)	10 kSteps					
CJ1M-CPU21	160 bits (No Expansion Rack)	5 kSteps					

Note: The available data memory capacity is the sum of the Data Memory (DM) and the Extended Data Memory (EM).

Common Specifications

Item	Specification					
Control method	Stored program					
I/O control method	yclic scan and immediate processing are both possible.					
Programming	Ladder diagram					
Instruction length	1 to 7 steps per instruction					
Ladder instructions	Approx. 400 (3-digit function codes)					
Execution time	Basic instructions: 0.02 µs min.; Special instructions: 0.04 µs min.					
Overhead time	CJ1G/H-CPU□□H: 0.3 ms CJ1G-CPU□□P: 0.3ms CJ1M-CPU□□(-ETN): 0.5 ms CJ1M-CPU□1(-ETN): 0.7 ms					
Unit connection method	No backplane (Units joined together with connectors.)					
Mounting method	DIN rail mounting (screw mounting not supported)					
Maximum number of connectable Units	Per CPU or Expansion Rack: 10 Units max. (Basic I/O Units, Special I/O Units, or CPU Bus Units) Total per PLC: 10 Units on CPU Rack and 10 Units each on 3 Expansion Racks = 40 Units max. (See note.)					
Maximum number of Expansion Racks	3 max. (A CJ-series I/O Control Unit is required on the CPU Rack and a CJ-series I/O Interface Unit is required on each Expansion Rack.) (See note.)					
Number of tasks	288 (cyclic tasks: 32, interrupt tasks: 256) Interrupt tasks can be defined as cyclic tasks to create cyclic interrupt tasks.					
	Note: 1. Cyclic tasks are executed each cycle and are controlled with TKON(820) and TKOF(821) instructions. 2. The following 4 types of interrupt tasks are supported: Power OFF interrupt tasks: 1 max. Scheduled interrupt tasks: 2 max. I/O interrupt tasks: 32 max. External interrupt tasks: 256 max.					
Interrupt types	Scheduled Interrupts:Interrupts generated at a time scheduled by CPU Unit's built-in timer (Interval: 1 to 9,999 ms or 10 to 99,990 ms; also 0.5 to 999.9 ms with CJ1M) I/O interrupt tasks:Interrupts from Interrupt Input Units or, with CJ1M, built-in I/O Power OFF Interrupts:Interrupts executed when CPU Unit's power is turned OFF External interrupt tasks:Interrupts from Special I/O Units and CPU Bus Units					
Calling subroutines from multiple tasks	Supported using global subroutines.					
Functions Blocks (CPU Ver. 3.0 or higher)	Languages supported for use in function block programming: Ladder program language and IEC 61131-3 Structured Text.					

Note: The CJ1G-CPU43H/42H support a maximum of 2 Expansion Racks with a total maximum of 30 Units.

The CJ1M-CPU13/23 support only 1 Expansion Rack with a total maximum of 20 Units (19 Units for CJ1M-CPU13-ETN).

The CJ1M-CPU11/12/21/22 do not support Expansion Racks and support a total maximum of 10 Units (9 Units for CJ1M-CPU11/CPU12-ETN).

		Control programs only. (I/O from external I/O terminals is not possible.) Note: When using work bits in programming, use bits in Work Area first before using	bits from other areas				
Holding Area		8,192 bits (512 words): H00000 to H51115 (words H000 to H511)	10:				
		Holding bits are used to control execution of program, and maintain their ON/OFF status when PLC is turned OFF or operating mode is changed. In CPU Ver.3.0 and higher, Words H512 to H1535 exist, but are internally allocated as Function Block Holding Area and cannot be used.					
Auxiliary Area		Read only: 7,168 bits (448 words): A00000 to A44715 (words A000 to A447)					
,		Read/write: 8,192 bits (512 words): A44800 to A95915 (words A448 to A959) Auxiliary bits are allocated specific functions.					
Temporary Area		16 bits (TR00 to TR15) Temporary bits are used to store ON/OFF execution conditions at program branches.					
Timer Area		4,096: T0000 to T4095 (used for timers only)					
Counter Area		4,096: C0000 to C4095 (used for counters only)					
DM Area		32 kWords: D00000 to D32767 Used as a general-purpose data area for reading and writing data in word units (16 bits). Words in DM Area maintain their status when PLC is turned OFF or operating mode is changed. Internal Special I/O Unit DM Area: D20000 to D29599 (100 words × 96 Units). Used to set parameters for Special I/O Units.					
=14.4		CPU Bus Unit DM Area: D30000 to D31599 (100 words × 16 Units). Used to set parameters for					
EM Area		32 kWords per bank, 7 banks max.: E0_00000 to E6_32767 max. (Not supported by CJ1M CPU Units.) Used as a general-purpose data area for reading and writing data in word units (16 bits). Words in EM Area maintain their status when PLC is turned OFF or operating mode is changed.					
		The EM Area is divided into banks, and addresses can be set by either of following methods.					
		Changing current bank using EMBC(281) instruction and setting addresses for current bank.					
		Setting bank numbers and addresses directly. EM data can be stored in files by specifying number of first bank. (EM file memory)					
Index Registers		IR0 to IR15. Store PLC memory addresses for indirect addressing. Index registers can be used independently in each task. One register is 32 bits (2 words).					
		Index registers can be specified as shared or independent for each task.					
Task Flag Area		32 (TK0000 to TK0031). Task Flags are read-only flags that are ON when corresponding cyclic task is executable and OFF when corresponding task is not executable or in standby status.					
Trace Memory		4,000 words (trace data: 31 bits, 6 words)					
File Memory		Memory Cards: OMRON Memory Cards with 15-MB, 30-MB, or 64-MB capacities can be used. EM file memory: Part of EM Area can be converted to file memory (MS-DOS format).	(MS-DOS format).				

156 Programmable Controllers

Function Specifications

Item	Specification						
Constant cycle time	1 to 32,000 ms (Unit: 1 ms) Note: With the CJ1G/H-CPU□□H, using the Parallel Processir execution.	, , ,					
Cycle time monitoring	Possible (Unit stops operating if cycle is too long): 1 to 40,000 ms (Unit: 10 ms) Note: When the Parallel Processing Mode is used for the CJ1G/H-CPU□□H, the program execution cycle is monitored. Also, a fatal error will occur in the CPU Unit if the peripheral servicing time exceeds 2 s.						
I/O refreshing	Cyclic refreshing, immediate refreshing, refreshing by IORF(097	r').					
Special refreshing for CPU Bus Units	Data links for Control Link Units, remote I/O communications for DeviceNet Units, and other special data for CPU Bus Units is refreshed at the following times. During I/O refresh period or when CPU BUS UNIT I/O REFRESH (DLNK) instruction is executed.						
I/O memory holding when changing operating modes	Depends on ON/OFF status of IOM Hold Bit in Auxiliary Area.						
Load OFF	All outputs on Output Units can be turned OFF when the CPU U	nit is RUN, MONITOR, or PROGRAM mode.					
Input time constant setting	Time constants can be set for inputs from CJ-series Basic I/O Ur of noise and chattering or it can be decreased to detect shorter						
Operating mode setting at power-up	Possible (By default, the CPU Unit will start in RUN mode if a Pr	rogramming Console is not connected.)					
Built-in flash memory	Always stores (automatically backs up/restores) the user prog When downloading projects from the CX-Programmer Ver. 5.0 symbol names and I/O comments), comment files (CX-Programd program index files (CX-Programmer section names, section the flash memory's internal Comment Memory (See note 1).	or later, symbol table files (including CX-Programmer mmer rung comments and annotations),					
Memory Card functions	Automatically reading programs (autoboot) from the Memory Card when the power is turned ON.	Possible					
	Program replacement during PLC operation	Possible					
	Memory Card storage data	User program: Program file format PLC Setup and other parameters: Data file format I/O memory: Data file format (binary), text format, CSV format CPU Bus Unit data: Special format					
	Memory Card read/write method	User program instructions, Programming Devices (including CX-Programmer and Programming Console), Host Link computers, AR Area control bits, easy backup operation					
Filing	Memory Card data and EM (Extended Data Memory) Area can						
Debugging	Force-set/reset, differential monitoring, data tracing (scheduled,						
Online editing	One or more program blocks in user programs can be overwritted. This function is not available for block programming areas. With edited at the same time.						
Program protection	Overwrite protection:Set using DIP switch. Copy protection: Password set using CX-Programmer.						
Error check	User-defined errors (i.e., user can define fatal errors and non-fa The FPD(269) instruction can be used to check execution time a Error status can be simulated with the FAL and FALS instruction	and logic of each programming block.					
Error log	Up to 20 errors are stored in error log. Information includes erro The system can be set so that user-defined FAL errors are not s	stored in the error log.					
Serial communications	Built-in peripheral port: Programming Device (e.g., CX-Program Built-in RS-232C port: Programming Device (e.g., CX-Programming Devic	ner), Host Links, no-protocol communications, NT Links,					
Clock	Serial Communications Unit (sold separately): Protocol macros, Provided on all models. Accuracy: ±1.5 min/mo. at 25°C (accur

Power supply output terminals	None			
RUN output (See note 2.)	Contact configuration: SPST-NO Switching capacity: 250 V AC, 2 A (resistive load) 120 V AC, 0.5 A (inductive load), 24 V DC, 2 A (resistive load) 24 V DC, 2 A (inductive load)	·		Not provided
Insulation resistance	20 MW min. (at 500 V DC) betwe (See note 3.)	en AC external and GR terminals	20 MW min. (at 500 V DC) between DC external and GR terminals (See note 3.)	No Isolation

- Note: 1. The values for inrush current given above for AC power supplies are for a cold start at room temperature. The values given for DC power supplies are for a cold start. The inrush control circuit in AC power supplies uses a thermistor element with a low-temperature current control characteristic. If the ambient temperature is high or the PC is hot-started, the thermistor will not be sufficiently cool, and the inrush currents given in the table may be exceeded by up to twice the given values. The inrush control circuit in DC power supplies uses a capacitor-charging delay circuit. If the PC is hot-started, the capacitor will have not discharged, and the inrush currents given in the table may be exceeded by up to twice the given values. When selecting fuses or breakers for external circuits, allow sufficient margin in shut-off performance.
 - 2. Supported only when mounted to CPU Rack.
 - 3. Disconnect the Power Supply Unit's LG terminal from the GR terminal when testing insulation and dielectric strength. Testing the insulation and dielectric strength with the LG terminal and the GR terminals connected will damage internal circuits in the CPU Unit.

General Specifications

Item	Specifications				
Dielectric strength	2,300 V AC 50/60 Hz for 1 min between AC external and GR terminals (See note 1.)				
	Leakage current: 10 mA max.				
	1,000 V AC 50/60 Hz for 1 min between AC external and GR terminals (See note 1.)				
	Leakage current: 10 mA max.				
Noise immunity	2 kV on power supply line (conforming to IEC61000-4-4)				
Vibration resistance	10 to 57 Hz, 0.075-mm amplitude, 57 to 150 Hz, acceleration: 9.8 m/s ² in X, Y, and Z directions for 80 minutes				
	(Time coefficient: 8 minutes x coefficient factor 10 = total time 80 min.) (according to IEC 60068-2-6/JIS C0040)				
Shock resistance	147 m/s ² , 3 times each in X, Y, and Z directions (Relay Output Unit: 100 m/s ²) (according to IEC 60068-2-27/JIS C0041)				
Ambient operating temperature	0 to 55°C				
Ambient operating humidity	10% to 90% (with no condensation)				
Atmosphere	Must be free from corrosive gases.				
Ambient storage temperature	–20 to 75°C (excluding battery)				
Grounding	Less than 100 W				
Enclosure	Mounted in a panel.				
Safety measures	Conforms to cULus and EC Directives.				

Note: 1. Disconnect the Power Supply Unit's LG terminal from the GR terminal when testing insulation and dielectric strength. Testing the insulation and dielectric strength with the LG terminal and the GR terminals connected will damage internal circuits in the CPU Unit.

Note: 1. CJ1M-CPU21 CPU Units have one PWM output only and do not have PWM output 1.

Built-in Input Specifications

Interrupt Inputs and Quick-response Inputs

	Item	Specification
No. of interrupt inputs/quick-response inputs		4 total
	Direct (Input Inter- rupt) Mode	Execution of an interrupt task is started at the interrupt input's rising or falling edge. Interrupt numbers 140 to 143 are used (fixed). Response time from meeting input condition to start of interrupt task execution: 93 µs min.
	Counter Mode	Rising or falling edges of the interrupt are counted using either an incrementing or decrementing counter, and an interrupt task is started when the input count reaches the set value. Interrupt numbers 140 to 143 are used (fixed). I/O response frequency: 1 kHz
Quick-response inputs		Signals that are shorted than the cycle time (30 µs min.) can be read and treated the same as signals that are one for more than one cycle time.

High-speed Counter Inputs

	Item	Specification						
Number of hig	h-speed counters	2 (High-speed counters 0 and 1)						
Pulse input mo	ode (Selected in PLC Setup)	Differential phase inputs (phase-A, phase-B, and phase-Z input)	Up/down inputs (up inputs, down inputs, reset inputs)	Pulse + direction inputs (pulse inputs, direction in- puts, reset inputs)	Increment inputs (increment inputs, reset inputs)			
Response fre-	Line-driver inputs	50 kHz	100 kHz	100 kHz	100 kHz			
quency	24-V DC inputs	30 kHz	60 kHz	60 kHz	60 kHz			
Counting mode	9	Linear mode or Ring mode (Select in the PLC Setup.)					
Count value		Linear mode: 80000000 to 7FFFFFF hex Ring mode: 00000000 to Ring SV (The Ring SV is set in the PLC Setup and the setting range is 00000001 to FFFFFFF hex.)						
High-speed co	unter PV storage locations	High-speed counter 0: A271 (leftmost 4 digits) and A270 (rightmost 4 digits) High-speed counter 1: A273 (leftmost 4 digits) and A272 (rightmost 4 digits) Target value comparison interrupts or range comparison interrupts can be executed based on these PVs. The PVs are refreshed in the overseeing processes at the beginning of each cycle. Use the PRV(881) instruction to read the most recent PVs.						
Control	Target value comparison	Up to 48 target values and corresponding interrupt task numbers can be registered.						
method Range comparison		Up to 8 ranges can be registered, with an upper limit, lower limit, and interrupt task number for each.						
Counter reset	method	Phase-Z + Software reset: Counter is reset when phase-Z input goes ON while Reset Bit is ON. Software reset: Counter is reset when Reset Bit goes ON. Reset Bits: High-speed Counter 0 Reset Bit is A53100, Counter 1 Reset Bit is A53101.						

Built-in Output Specifications

Position Control and Speed Control

Item	Specifications
Output frequency	1 Hz to 100 kHz (1-Hz units from 1 to 100 Hz, 10-Hz units from 100 Hz to 4 kHz, and 100-Hz units from 4 to 100 kHz)
Frequency acceleration and deceleration rates	Set in 1 Hz units for acceleration/deceleration rates from 1 Hz to 2 kHz (every 4 ms). The acceleration and deceleration rates can be set separately only with PLS2(887).
Changing SVs during instruction execution	The target frequency, acceleration/deceleration rate, and target position can be changed. Changes to the target frequency and acceleration/deceleration rate must be made at constant speed.
Pulse output method	CW/CCW inputs or Pulse + direction inputs
Number of output pulses	Relative coordinates: 00000000 to 7FFFFFFF hex (Each direction accelerating or decelerating: 2,147,483,647)
	Absolute coordinates: 80000000 to 7FFFFFF hex (-2,147,483,648 to 2,147,483,647)
Instruction used for origin searches and returns	ORIGIN SEARCH (ORG(889)): Origin search and origin return operations according to set parameters
Instructions used for position	PULSE OUTPUT (PLS2(887): Trapezoidal output control with separate acceleration and deceleration rate
and speed control	SET PULSES (PULS(886)): Setting the number of pulses for pulse output
	SPEED OUTPUT ((SPED(885): Pulse output without acceleration or deceleration (Number of pulses must be set in advance with PULS(886) for position control.)
	ACCELERATION CONTROL (ACC(888)): Changes frequency or pulse output with acceleration and deceleration
	MODE CONTROL (INI(880)): Stopping pulse output
Pulse output PV's storage loca-	The following Auxiliary Area words contain the pulse output PVs:
tion	Pulse output 0: A277 (leftmost 4 digits) and A276 (rightmost 4 digits) Pulse output 1: A279 (leftmost 4 digits) and A278 (rightmost 4 digits)
	The PVs are refreshed during regular I/O refreshing. PVs can be read to user-specified words with the PRV(881) instruction.

Variable-duty Pulse Outputs (PWM)

Item	Specifications			
Duty ratio	0% to 100%, set in 0.1% units (See note.)			
Frequency	0.1 Hz to 999.9 Hz, Set in 0.1 Hz units.			
Instruction	PULSE WITH VARIABLE DUTY RATIO (PWM(891)): Sets duty ratio and outputs pulses.			

Note: CJ1M CPU Unit Ver. 2.0 or later only. (0% to 100%, set in 1% units for Pre-Ver. 2.0 CPU Units.)

CJ1G-CPU□□P (Loop-control CPU Units) Specifications

Providing Effective Solutions by Integrating Sequence Control and Loop Control into the Same Basic Functionality of the CJ Series

Overview

An engine for controlling analog quantities (e.g., temperature, pressure, flowrate) is built into the same CPU Unit as the engine for executing sequence control, delivering high-speed sequence control and high-speed, advanced analog quantity control in a single Unit.

Features

- Program graphically by pasting function blocks for PID control, square root calculations, or other functions in a window and then connect them with the mouse.
- More than 70 types of function blocks are provided, including Bank Selector and Split Converter (for heating and cooling control), supporting a
 wide array of control methods from basic PID control to cascade control and feed-forward control.
- Function blocks enable a control cycle speed of up to 10 ms. A range of control methods are supported from detailed flowrate control and pressure control to high-speed temperature control.
- The CX-Process Tool can be used to open the tuning window and change parameters while monitoring PVs, SPs, and MVs.
- The Face Plate Auto-builder for NS (order separately) can be used to automatically create touch panel adjustment windows, including control windows, tuning windows, and segment program parameter setting windows, from function block data.

Programming Example

Example: Program Control

Function Specifications

CPU Element (Sequence Control)

Name	I/O bits	Program capacity	DM words	EM words	Model
Loop-control CPU Unit	1,280 bits	60K steps		32K words × 3 banks E0_00000 to E2_32767	CJ1G-CPU45P
		30K steps		32K words × 1 bank	CJ1G-CPU44P
	960 bits	20K steps		E0_00000 to E0_32767	CJ1G-CPU43P
		10K steps			CJ1G-CPU42P

Method for creating and transferring function blocks		Created using CX-Proc	ess Tool (order separat	ely) and transferred to L	oop Controller.	

	Item	Model	CJ1G-CPU42P	CJ1G-CPU43P	CJ1G-CPU44P	CJ1G-CPU45P
			PID with 2 degrees of freedom (with autotuning)			
		Any of the following function blocks can be combined: Basic PID control, cascade control, feed-forward control, sample PI control, Smith dead time compensation control, PID control with differential gap, override control, program control, time-proportional control, etc.				
Alarms	PID block interr	nal alarms	4 PV alarms (upper upper-limit, upper limit, lower limit, lower lower-limit) and 1 deviation alarm per PID block.			
	Alarm blocks		High/low alarm blocks, deviation alarm blocks			

Task Programming

Better Design/Development Efficiency Structured Programming and Team Program Development Using Tasks

With CJ-series PLCs, programs can be divided into programming units called tasks. There are both cyclic tasks, which are executed each cycle in a specified order, and interrupt tasks, which are executed when an interrupt occurs.

With CJ1-series PLCs, up to 288 tasks can be executed as cyclic tasks.

Task Programming Example with CX-Programmer

Advantages

Program Standardization

Task programs are created in units divided by functionally by purpose. These functional units can be easily reused when programming new PLCs or systems with the same functionality.

Easier-to-understand Programs

With scroll-like programs, individual functional units are extremely difficult to find just by looking at the program.

Tasks are used to separate a program functionally and make the program much easier to understand.

Shorter Cycle Times

With a scroll-like program, many jump and similar instructions had to be used to avoid executing specific parts of the program. This not only slows down the programs, but makes them more difficult to understand. With task programming, special instructions enable controlling the execution of tasks so that only the require tasks are executed during any particular cycle.

Greater Efficiency in Team Program Development (Unit Ver. 2.0 or Later Only)

Checking Address Duplication between Tasks (CX-Programmer Ver. 4.0 or Higher)

The CX-Programmer automatically executes a cross-reference report that checks whether the same addresses have been used by two or more tasks (programs) created by two or more people.

List of duplicated addresses on CX-Programmer

Downloading in Task Units

(CX-Programmer Ver. 4.0 or Higher)

When a program has been created by two or more people, each person can use the CX-Programmer to download only the task (program) they have changed.

Monitoring Operating Status for Each Task (CX-Programmer Ver. 4.0 or Higher)

The execution status for each task can be monitored from the CX-Programmer, contributing to improved debugging efficiency.

Monitored from CX-Programmer

Task Features

Standardization of Common Processing

Global subroutines are supported that can be called from different tasks. This enables removing standard programming sections from individual tasks for execution as global subroutines, greatly reducing the size of the overall program.

Faster Switching between Tasks

Switching between tasks is faster than ever before to ensure highspeed cycle times even with structured programming.

High-speed Processing

Ample Speed for Advanced Machine Interfaces, Communications, and Data Processing

High-speed Instructions and System Bus

Faster Execution Times (from 20 ns) and Faster Processing of Frequently Used Instructions

Faster instruction processing includes 0.02 μs for LD and 0.18 μs for MOV. A complete range of instructions (more than 400) is supported, more than 100 of which are frequently used special instructions that can be processed almost as fast as basic instructions, as fast as 0.18 μs for some instructions.

Four Times the Peripheral Servicing and I/O Refresh Speed

Increased efficiency in data transmission between the CPU Unit and Special I/O Units/CPU Bus Units further improves performance of the entire system.

Refresh time for CJ-series 64-point Input Units:

0.011 ms (16 times faster)

Refresh time for CJ-series 64-point Output Units:

0.011 ms (8 times faster)

Refresh time for 256 words for Communications Unit:

0.45 ms (4 times faster)

30 Times the Overall Cycle Speed

Example 1: The following example is for 30-Kstep programs (basic instructions: 50%; MOV instructions: 30%; arithmetic operation instructions: 20%).

Example 2: The following example is for 10-Kstep programs (basic instructions: 50%; MOV instructions: 30%; arithmetic operation instructions: 20%).

High-speed Exchange with Communications Units and High-speed Data Processing

Response Time for both Instruction Execution and Peripheral Servicing Can Be Emphasized

With CJ1G and CJ1H CPU Units, a Parallel Processing Mode can be used to perform program execution and peripheral servicing in parallel. Parallel processing doubles the speed of peripheral serving time over previous PLCs, enabling the following types of application.

- High-volume, high-speed data exchange is possible with a host without the speed being affected by the size of the program in the CPU Unit
- Data can be exchanged with SCADA software with consistent timing for smooth data updates.
- The cycle time is not affected even if communications are increased or networks added in future system expansions.

Control Inconsistencies in the Cycle Time for Data Processing

Table data, text string, or other instructions requiring long execution times can be executed over multiple cycles to minimize the affect on the cycle time and maintain more consistent I/O response characteristics

Background processing over multiple cycles can be used to mini-mize the affect on the cycle time and control inconsistencies

Better Refresh Performance for Data Links, DeviceNet Remote I/O, and More

I/O refresh processing with CPU Bus Units, which was previously performed only during I/O refreshing after instruction execution, is now possible at any time using the DLNK instruction. The CPU Bus Unit's refresh response performance has been improved by enabling refresh processing specific to CPU Bus Units, such as data links and DeviceNet remote I/O communications, and refreshing of words allocated to the Units in the CIO Area and DM Area any time during instruction execution.

Unit	Refresh function	
Controller Link Unit	Data links	
DeviceNet Unit	Remote I/O	
Serial Communications Unit	Protocol macros	
Ethernet Unit	Socket servicing for specific bit manipulations	

Increased Security

Various Forms of Protection Provide Better Security

Conceal Intellectual Property Contained in Programs (Unit Ver. 2.0 or Later)

Password Read Protection for Tasks (CX-Programmer Ver. 4.0 or Higher)

Specific tasks (programs) can be set to prohibit reading unless the correct password is input.

This function enables concealment of intellectual property contained in programs. The overwrite prohibit function also protects programs concealing intellectual property from being carelessly overwritten.

Prevent Leakage of Intellectual Property (Unit Ver. 2.0 or Later)

Prohibit/Allow File Memory Program File Creation (CX-Programmer Ver. 4.0 or Higher)

In addition to UM read protection and task read protection, user programs can also be protected from being illegally transferred to a Memory Card. This function enables complete read protection of programs in the PLC and prevents leakage of intellectual property.

Write Protection from Specific Nodes through Networks (Unit Ver. 2.0 or Later)

CPU Unit FINS Write/Protection through Networks (CX-Programmer Ver. 4.0 or Higher)

Specific nodes can be prohibited from writing to other nodes on the network. Data transmissions through the network are monitored, preventing data being carelessly written to the PLC, and preventing problems in the system.

Instruction Features

High-volume Data Processing with One Instruction

The basic data format for specifying instruction operands has been changed from BCD to binary, enabling specification of more data for each instruction.

Example: BLOCK TRANSFER Instruction

Address type	C200HX/HG/HE PLCs	CJ-series PLCs	
Direct	0 to 6,655 words	0 to 65,535 words	
Indirect for DM Area	DM 0000 to DM 9999	D00000 to D32767	

Binary Specifications for Timer/Counter Instructions

Either BCD or binary can be used to specify the set values for timer and counter instructions. Using a binary specification enables specifying longer periods of time and higher count values.

Examples: TIM instruction (BCD): 0 to 999.9 s TIMX instruction (binary) 0 to 6,553.5 s CNT instruction (BCD): 0 to 9,999 counts

CNTX instruction (binary): 0 to 65,535 counts

Applicable Instructions:

Binary Timer/Counter Instructions: BINARY TIMER: TIMX(550)

BINARY COUNTER: CNTX(546)

BINARY HIGH-SPEED TIMER: TIMHX(551) BINARY ONE-MS TIMER: TMHHX(552) BINARY ACCUMULATIVE TIMER: TTIMX(555)

BINARY LONG TIMER: TIMLX(553) BINARY MULTI-OUTPUT TIMER: MTIMX(554) BINARY REVERSIBLE COUNTER: CNTRX(548) BINARY RESET TIMER/COUNTER: CNRX(547)

Simplifier Ladder Programming

Programs using many basic instructions can be simplified greatly by using differentiated versions of the LD NOT, AND NOT, and OR NOT instructions, as well as bit access instructions for the DM and EM

Bit Access Instructions:

168

SINGLE BIT OUTPUT (OUTB(534))

Simplify Programs with Index Registers

Index registers can be used as memory pointers to enable easily changing the addresses specified for instructions. Using an index register can often enable one instruction to preform the processing previously performed by many instructions.

Index Registers: IR00 to IR15

Easily Repeat Processing

Instructions are provided that let you easily repeat sections of the program. Repeat execution can also be ended for a specified condition.

Applicable Instructions:

Loop Control Instructions: START FOR-NEXT LOOPS (FOR(512)) END FOR-NEXT LOOPS (NEXT(513)) BREAK LOOP (BREAK(514))

Interlock Nesting (Unit Ver. 2.0 or Later Only)

(CX-Programmer Ver 4.0 or Higher)

The previous interlock instructions cannot be nested. In actual applications, however, the entire interlock condition is often combined with partial interlock conditions. Multi-interlock instructions can be nested to better handle real applications.

- When a worker is present, the N.O. contact turns ON and the product enters the conveyor.
- 3) When the emergency stop switch is pressed, the conveyor and product entry stop.

Using Existing IL Instructions

Using Multi-interlock Instructions

CX-Programmer Screen

Interlock status is easy to understand using the software.

Applicable Instructions:

Sequence Control Instructions:

MULTI-INTERLOCK DIFFERENTIATION HOLD (MILH(517))
MULTI-INTERLOCK DIFFERENTIATION RELEASE (MILR(518))
MULTI-INTERLOCK CLEAR (MILC(519))

Easily Program Cam Switch Control (Unit Ver. 2.0 or Later Only)

The EXPANDED BLOCK COMPARE (BCMP2(502)) instruction can be used to compare data converted from Gray binary code to binary data, BCD data, or an angle using the GRAY CODE CONVERT (GRY(474)) instruction. It can also compare data in ranges including 0, such as angle data.

If the comparison data (S) is within an of the 256 ranges, BCMP2(502) will turn ON the corresponding output bit in the results. If the upper limit is less than the lower limit, the comparison range will include 0.

Example of Compare Data

Angle Data

Controlling a Machine that Adjusts Timing According to Angles (Cam Switch Control)

Repeatedly Starting a Timer

Controlling Machine Timing Directly (Rotary Timer Control)

Applicable Instructions:

Conversion instructions:

GRAY CODE CONVERT (GRY(474))

Comparison instructions:

EXPANDED BLOCK COMPARE (BCMP2(502))

BCMP2(502) is supported by Pre-Ver. 2.0 CJ1M CPU Units or later.

PID Autotuning

PID constants can be automatically tuned for the PID instructions. The limit cycle method is used for tuning, allowing tuning to be completely quickly. This is particularly effective when there are many PID control loops.

PID instructions can be combined with the TIME-PROPORTIONAL OUTPUT (TPO(685)) instruction to enable time-proportional output of a manipulated variable (MV).

Applicable Instructions:

Control instructions:

PID CONTROL WITH AUTOTUNING (PIDAT(191))
TIME-PROPORTIONAL OUTPUT (TPO(685))

Easily Process Stacks: One-word Records for FIFO Processing

Stacks can be created in the DM Area or other areas for FIFO or other stack processing. The SET STACK (SSET(630)) instruction is used to create a stack.

Applicable Instructions:

Stack Instructions: SET STACK (SSET(630)) PUSH ONTO STACK (PUSH(632)) FIRST IN FIRST OUT (FIFO(633)) LAST IN FIRST OUT (LIFO(634))

Simple Data Searches (Single Words)

Instructions are provided to find the maximum value, minimum value, and search values.

Applicable Instructions:

Search Instructions: DATA SEARCH (SRCH(181)) FIND MAXIMUM (MAX(182)) FIND MINIMUM (MIN(183))

Real-time Data Management for Conveyors and Other Applications

When workpieces are added and removed during processing, such as with conveyors, the CJ1-series PLCs enable stack data to be inserted or deleted as required to easily manage workpiece data in real-time.

Applicable Instructions:

Table Data Processing Instructions: SET STACK (SSET(630)) STACK SIZE READ (SNUM(638)) STACK DATA READ (SREAD(639)) STACK DATA OVERWRITE (SWRIT(640)) STACK DATA INSERT (SINS(641)) STACK DATA DELETE (SDEL(642))

Process Data Tables: Multi-word Records

Areas of memory can be defined as tables with the specified record size (words). Index registers can be used with such tables to easily sort records, search for values, or otherwise process the records in the table

For example, the temperature, pressure, and other settings for each model of a product can be set in separate records and the data handled by record.

Applicable Instructions:

Table Data Instructions: DIMENSION RECORD TABLE (DIM(631)) SET RECORD LOCATION (SETR(635)) GET RECORD NUMBER (GETR(636))

High-precision Approximations

Converting a level meter reading in mm to tank capacity in liters according to the shape of the tank and other difficult linear extrapolations requiring high data resolution can be performed. (Linear data can be handled as 16-bit unsigned binary or BCD data, 16-bit or 32-bit signed binary data, or floating-point decimal data.)

Applicable Instructions:

ARITHMETIC PROCESS (APR(069))

Convert between Floating-point and Text Data

Instructions are provided to easily convert floating-point decimal numbers (real numbers) to text strings (ASCII) for display on PTs. These are display as character display objects on the PT.

Character display object

You can also convert ASCII data (text strings) received from measurement devices to floating-point decimal data for use in calculations.

Applicable Instructions:

Floating-point Decimal Math instructions FLOATING- POINT TO ASCII (FSTR(448)) ASCII TO FLOATING-POINT (FVAL(449))

High-precision Positioning for XY Tables and Other Applications

Floating-point decimal and double-precision calculation instruction have been supported. These are essential for position control operations. Now more precise position control is possible than ever before.

Applicable Instructions:

Floating-point Decimal and Double-precision Math instructions

Easily Programmed Calendar Timers (Unit Ver. 2.0 or Later)

Two sets of calendar data can be compared. The calendar data to be compared can be restricted to the year, month, day, hour, minutes, or seconds

Example: The calendar timer function can be easily set for a specific function to operate every day at 17:00:00 (H:M:S).

Applicable Instructions:

Comparison instructions

Time comparison:

= DT(341)

<> DT(342) < DT(343)

<= DT(344)

> DT(345)

>= DT(346)

Simplified Execution of Subroutines with Different Operands

Macro instructions can be used to execute the same subroutine program with different operands from different locations in the programs.

Applicable Instructions:

Subroutine instruction: MACRO (MCRO(099))

CJ1 series CPU Units

Simulate Specific Error Statuses for Debugging

The FAL(006) and FALS(007) instructions can be used to simulate a desired error condition. This can be used, for example, to intentionally create error conditions in the CPU Unit while debugging to check to see if the correct error messages are displayed on a PT.

Example

Applicable Instructions:

Diagnostic Instructions FAILURE ALARM (FAL(006)) SEVERE FAILURE ALARM (FALS(007))

Easily Program Logic Flow Control with Block Programming Sections

A block of mnemonic programming instructions can be executed as a group based on a single execution condition. IF/THEN, WAIT, TIMER WAIT, and other instructions can be used inside the block programming section to easily program logic flow control that is difficult to program with ladder diagrams.

Applicable Instructions:

Block Programming instructions

Easily Handle Text Strings

Manufacturing instruction can be obtained from a host computer or other external source, stored in memory, and then manipulated as text strings (ASCII data) as required by the applications. The text strings can be searched, fetched, reordered, or other processed in the CPU Unit of the PLC.

Applicable Instructions:

Text String Processing instructions

Read Maintenance Information Easily through DeviceNet (Unit Ver. 2.0 or Later) NEW!

Send user-set explicit messages easily without having to consider FINS commands. Data transmission between PLCs can also be achieved simply using explicit messages.

Applicable Instructions:

Network Instructions

EXPLICIT MESSAGE SEND (EXPLT(720))

EXPLICIT GET ATTRIBUTE (EGATR(721))

EXPLICIT SET ATTRIBUTE (ESATR(722))

EXPLICIT WORD READ (ECHRD(723))

EXPLICIT WORD WRITE (ECHWR(724))

Basic System Configuration

CJ-series CPU Rack

A CJ-series CPU Rack consists of a CPU Unit, Power Supply Unit, Basic I/O Units, Special I/O Units, CPU Bus Units, and an End Cover. I/O Control Units are required to connect CJ-series Expansion Racks. Memory Cards are optional.

CJ-series Expansion Racks

 $\mbox{CJ-series}$ Expansion Racks can be connected to $\mbox{CJ-series}$ CPU Racks or other CJ-series Expansion Racks.

A CJ-series Expansion Rack consists of a Power Supply Unit, an I/O Interface Unit, Basic I/O Units, Special I/O Units, CPU Bus Units, and an End Cover.

Note: Connection of CS-series Expansion Racks is not supported.

Number of Expansion Racks

CPU Unit	No. of Expansion Racks	Max. No. of Units
CJ1H-CPU67H	3	40
CJ1H-CPU66H		
CJ1H-CPU65H		
CJ1G-CPU45H/45P

PFP-100N2	16 mm
PFP-100N	7.3 mm
FPP-50N	7.3 mm

I/O Interface Unit

2.7 (140) 68

8/16-point Basic I/O Unit and Interrupt Input Unit

64-point Basic I/O Unit

Special I/O Unit

W, the total width is given by the following formula:

W = 80 (Power Supply Unit) + 62 (CPU Unit) + 20 x n + 31 x m + 14.7 (End Cover) (mm)

where n is the number of Units of width 20 mm and m is the number of Units of width 31mm.

Example:For configurations with 2 32-point Basic I/O Units and 8 Units of width 31 mm:

 $W = 156.7 + 20 \times 2 + 31 \times 8 = 444.7 \text{ mm}$

Mounting Depth

The mounting depth of CJ-series CPU Racks and Expansion Racks is from 81.6 to 89.0 mm depending on the Units that are mounted. Additional depth is required to connect Programming Devices (e.g., CX-Programmer or Programming Console) and Cables. Be sure to allow sufficient mounting depth.

Note: Consider the following points when expanding the configuration:

- The total length of I/O Connecting Cable must not exceed 12 m.
- I/O Connecting Cables require the bending radius indicated below.

CS/CJ-series Connecting Cable

CJ1 series CPU Units 175

Current Consumption

The amount of current/power that can be supplied to the Units mounted in a Rack is limited by the capacity of the Rack's Power Supply Unit. The system must be designed so that the total current consumption of the Units does not exceed the maximum current for each voltage group and the total power consumption does not exceed the maximum for the Power Supply Unit.

CPU Racks and Expansion Racks

The following table shows the maximum currents and power that can be supplied by Power Supply Units on CPU Racks and Expansion Racks.

- Note: 1. When calculating current/power consumption in a CPU Rack, be sure to include the power required by the CPU Unit itself. When expanding the configuration, be sure to include the power required by the I/O Control Unit.
 - 2. When calculating current/power consumption in an Expansion Rack, be sure to include the power required by the I/O Interface Unit itself.

Power Supply Unit	Maximum current consumption			(C) Maximum total power
			24-V group service power supply	consumption
CJ1W-PA205R	5.0 A	0.8 A	None	25 W
CJ1W-PA202	2.8 A	0.4 A	None	14 W
CJ1W-PD025	5.0 A	0.8 A	None	25 W
CJ1W-PD022	2.0 A	0.4 A	None	19.6 W

Be sure that both conditions 1 and 2 below are met.

Condition 1: Maximum Current Supply

- 1. Current required at 5 V DC by all Units (A) ≤Maximum current consumption shown in table
- 2. Current required at 24 V DC by all Units (B) \(\text{Maximum current consumption shown in table} \)

Condition 2: Maximum Total Power Supply A x 5 V DC + B x 24 V DC + C x 24 V DC \pm Maximum total power consumption shown in table (C)

Example Calculations

In this example, the following Units are mounted to a CJ-series CPU Rack with a CJ1W-PA202 Power Supply Unit.

Unit	Model	Quantity	5- V DC	24- V DC
CPU Unit	CJ1G-CPU45H	1	0.910 A	
I/O Control Unit	CJ1W-IC101	1	0.020 A	
Input Units	CJ1W-ID211	2	0.080 A	
	CJ1W-ID231	2	0.090 A	
Output Units	CJ1W-OC201	2	0.090 A	0.048 A
Special I/O Unit	CJ1W-DA041	1	0.120 A	
CPU Bus Unit	CJ1W-CLK21	1	0.350 A	
Current consumption	Calculation		0.910+0.020+0.080×2+0.090x2+ 0.090x2+0.120+0.350	0.048 Ax2
Result			1.92 A (£5.0 A)	0.096 A (£0.8 A)
Power consumption	Calculation		1.92x5 V=9.60 W	0.096 Ax24 V=2.304 W
	Result		9.60+2.304=11.904 W (£25 W)	

Current Consumption Tables

CPU Units and Expansion Units

CJ-series CPU Bus Units

Name	Model	Current consumption at 5 V (A)
Controller Link Unit	CJ1W-CLK21-V1	0.35
Serial Communications Unit	CJ1W-SCU41	0.38 (See note.)
	CJ1W-SCU21	0.28 (See note.)
Position Control Unit	CJ1W-NCF71	0.36
Motion Control Unit	CJ1W-MCH71	0.60
CAN Unit	CJ1W-CORT21	0.33
Ethernet Unit	CJ1W-ETN11/21	0.38
DeviceNet Unit	CJ1W-DRM21	0.33
PROFIBUS-DP Master Unit	CJ1W-PRM21	0.40

Note: Add 0.15 A per Unit when the NT-AL001-E is connected and 0.04 A when the CJ1W-CIF11 RS-422A Adapter is connected.

Note: This table may contain Units that are no longer in production

CJ1 series CPU Units

I/O Allocations

I/O Allocations

In CJ-series PLCs, part of the I/O memory is allocated to each Unit. Units are divided into the following 3 groups for allocations.

- •Basic I/O Units
- Special I/O Units
- •CPU Bus Units

Basic I/O Units

Allocations

CIO Area:

CIO 0000 to CIO 0079 (See note.)

(Memory is allocated in word units based on mounting position in the Racks.)

Note: The Rack's first word setting can be changed from the default setting (CIO 0000) to any word from CIO 0000 to CIO 9999. The first word setting can be changed only with a Programming Device other than a Programming Console.

Basic I/O Units

Special I/O Units

Allocations

Special I/O Unit Area: CIO 2000 to CIO 2959 (See note.) (Each Unit is allocated ten words based on its unit number.)

Note: A maximum of 40 Units can actually be mounted to a PLC because that is the maximum number of slots possible.

Special I/O Units

CJ1 CPU Bus Units

Allocations

CPU Bus Unit Area: CIO 1500 to CIO 1899 (Each Unit is allocated 25 words based on its unit number.)

CJ1 CPU Bus Units

Allocations to Basic I/O Unit Groups

Allocated words in the CIO Area: CIO 0000 to CIO 0079

Basic I/O Units can be mounted to the CPU Rack and Expansion Racks.

Allocation Methods

1. CPU Rack

Basic I/O Units on the CPU Rack are allocated words left to right (i.e., from the Unit nearest the CPU Unit) starting from CIO 0000. Units are allocated as many words as required in word units. Words can be reserved using the CX-Programmer.

Example Words allocated from the left

		1	2	3	4	5	CPU Racl
Power Supply Unit	CPU Unit	IN 16 CIO 0000	IN 16 CIO 0001	IN 32 CIO 0002 to 0003	to	OUT 64 CIO 0006 to 0009	

Note: Units with between 1 and 16 I/O points are allocated 1 word (16 bits) and Units with between 17 and 32 I/O points are allocated 2 words (32 bits). For example, 8-point Relay Units are allocated 1 word, with bits 00 to 07 actually allocated to the I/O points.

2. Allocations to Expansion Racks

I/O allocation to Basic I/O Units continues from the CPU Rack to the Expansion Racks. Words are allocated from left to right and each Unit is allocated as many words as it requires in word units, just like Units in the CPU Rack. A Rack's first word setting can be changed set to any word from CIO 0000 to CIO 9999 using a Programming Device.

Allocations to Special I/O Units

Each of these Units is allocated ten words in the Special I/O Unit Area (CIO 2000 to CIO 2959).

Special /O Units can be mounted to the CPU Rack and Expansion Racks.

Each Unit is allocated 10 words in the Special I/O Unit Area according to its unit number, as shown in the following table.

Unit number	Words allocated
0	CIO 2000 to CIO 2009
1	CIO 2010 to CIO 2019
2	CIO 2020 to CIO 2029
1	1
15	CIO 2150 to CIO 2159
1	:
95	CIO 2950 to CIO 2959

Note: Special I/O Units are ignored during I/O allocation to Basic I/O Units. Slots containing Special I/O Units are treated as empty

Allocations to CPU Bus Units

Each CPU Bus Unit is allocated 25 words in the CPU Bus Unit Area (CIO 1500 to CIO 1899).

CPU Bus Units can be mounted to the CPU Rack or Expansion Racks. Each Unit is allocated 25 words in the CPU Bus Unit Area according to its unit number, as shown in the following table.

Unit number	Words allocated
0	CIO 1500 to CIO 1524
1	CIO 1525 to CIO 1549
2	CIO 1550 to CIO 1574
1	ı
'	'
15	CIO 1875 to CIO 1899

Note: CPU Bus Units are ignored during I/O allocation to Basic I/O Units. The same unit numbers can be used for Special I/O Units and CPU Bus Units.

Programming Consoles

CQM1H-PRO01-E

Model	Cable	Cable length
CQM1H-PRO01-E	Not required.	

Windows-based Programming Software: CX-One

Omron's integrated software for programming and configuration of all control system components, including PLCs, HMI, drives, temperature controllers and advanced sensors.

Name	Model	Specifications
CX-One	CX-ONE-AL□□C-E ^{*1}	Windows 2000 / XP

^{*1 □□ =} Number of licences; 01, 03, 10

Note: CX-One includes the PLC programming tool CX-Programmer, previously released as a separate package. CX-Programmer Version 2.04 or higher is required to program CJ-series PLCs.

CJ1 series CPU Units 179

Connecting to the Peripheral Port

Peripheral Port Connecting Cables

Cable	Length	Computer con- nector
CS1W-CN226	2.0 m	D-sub, 9-pin, male
CS1W-CN626	6.0 m	

The following cables can be used for an RS-232C connection from the computer to the peripheral port.

Mode	Connecting cables			Computer connector
Peripheral bus or Host Link	XW2Z-200S-CV or XW2Z-500S-CV		2 or 5 m + 0.1 m	D-sub, 9-pin, male
Host Link	XW2Z-200S-V or XW2Z- 500S-V			

Connecting to the RS-232C Port

RS-232C Port Connecting Cables

Mode	Cable	Length	Computer connector
Peripheral Bus or	XW2Z-200S-CV	2.0 m	D-sub, 9-pin
Host Link	XW2Z-500S-CV	5.0 m	

Note: Cables with model numbers ending in "CV" are anti-static.

The following cables can be used for an RS-232C connection from the computer to an RS-232C port. (Unlike "CV" models, however, they do not support Peripheral Bus and do not use anti-static connectors.)

Mode	Cable	Length	Computer connector
Host Link	XW2Z-200S-V	2.0 m	D-sub, 9-pin
	XW2Z-500S-V	5.0 m	

The following serial communications modes can be used to connect a computer with the CX-Programmer to a CJ-series PLC.

Mode	Features
Peripheral Bus	The faster mode, peripheral bus is generally used for CX-Programmer connections. Only 1:1 connections are possible. The baud rate is automatically detected with the CJ1.
Host Link	A standard protocol for host computers. Slower than peripheral bus, but allows modem or optical adapter connections, or long-distance or 1:N connections via RS-422A/485.

Using a USB-Serial Conversion Cable to Connect to a Peripheral or RS-232C Port

General Specifications of USB-Serial Conversion Cable

USB interface standard		Conforms to USB Specification 1.1.	
DTE speed		115.2 Kbits/s	
Connectors	On computer	USB (A plug connector, male)	
	On PLC	RS-232C (D-sub, 9-pin, female)	
Power supply		Bus power (supplied from upstream, 5 V DC)	

Current consu	mption	35 mA
	Ambient temperature	0 to 55 ° C
environment	Ambient humidity	10% to 90% (with no condensation)
	Ambient atmosphere	No corrosive gases
Weight		50 g

OS with Drivers for USB-Serial Conversion Cable Windows 98, ME, 2000, or XP

Applicable Software

CX-One is the integrated software for programming and configuration of all Omron control system components, including PLCs, HMI, drives, temperature controllers and advanced sensors.

It includes the functionality of previously released individual software tools like CX-Programmer, CX-Designer, CX-Simulator, CX-Protocol, and network configuration tools.

Peripheral Port Connecting Cables

Computer	Serial Communications Node	Connecting Cable model number			Length	Computer connector
IBM PC/AT	Tool bus or SYSMAC WAY	CS1W-CIF31	CS1W-CN226		0.5 m + 2.0 m	USB (A plug connector)
or compatible			CS1W-CN626		0.5 m + 6.0 m	
		CS1W-CIF31	XW2Z-200S-CV/ XW2Z-500S-CV	CS1W-CN118	0.5 m + (2.0 m or 5.0 m) + 0.1 m	
	SYSMAC WAY	CS1W-CIF31	XW2Z-200S-V/ XW2Z-500S-V		0.5 m + (2.0 m or 5.0 m) + 0.1 m	

RS-232C Port Connecting Cables

Computer	Serial Communications Node	Connecting Cable model	number	Length	Computer connector
IBM PC/AT	Tool bus or SYSMAC WAY	CS1W-CIF31	XW2Z-200S-CV	0.5 m + 2.0 m	USB (A plug connector)
or compatible			XW2Z-500S-CV	0.5 m + 5.0 m	
	SYSMAC WAY	CS1W-CIF31	XW2Z-200S-V (See note.)	0.5 m + 2.0 m	
			XW2Z-500S-V (See note.)	0.5 m + 5.0 m	

Connection in Tool Bus Mode is not possible. The connector does not have ESD measures.

I/O Terminal Blocks

Most I/O units that use a 18-point removable terminal block are available in two variations:

• Conventional M3 Screw type connection

This type can be used with standard or solid wire up to $1.5~\rm mm^2$, with or without ferrules. This option is designated by the suffix (SL).

Interrupt Input Unit

High-speed Response for Interrupt Task Execution: 0.37 ms OFF to ON and 0.82 ms ON to OFF

An input to the Interrupt Input Unit immediately interrupts CPU Unit processing to suspend execution of cyclic tasks (i.e., the normal programming) and execute an I/O interrupt task.

System Configuration

Specifications

Input voltage	Inputs	Input signal pulse width	No. of mountable Units	Mounting location	External connections
24 V DC		ON: 0.05 ms min. OFF: 0.5 ms min.		Any of the leftmost 5 slots (CJ1M: 3 slots) next to the CPU Unit on the CPU Rack.	Removable terminal block

CJ1W-IDP01

High-speed Input Unit

Latches input pulses as short as 50 µs.

- Reads pulses that are too fast for normal I/O, such as is often requried for signal exchange with inspection devices.
- Reads pulse widths (ON time) as short as 0.05 ms.
- Inputs stored in the internal circuits are cleared in I/O refresh period.

System Configuration

Specifications

Input voltage	Inputs	Input signal pulse width	No. of mountable Units	Mounting location	External connections
24 V DC	16 inputs	ON: 0.05 ms min.	No restrictions beyond	No restrictions	Removable terminal block
	1	OFF: 0.5 ms min.	normal limits for CPU Unit		

Circuit Configuration and Terminal Connections

High-speed Input Unit 195

CJ1W-TS561/-TS562

Temperature Input Units

Connect up to 6 temperature sensors per Unit.

These Basic I/O units allow up to 6 temperature sensors to be connected.

- Input types (TS561: thermocouple J/K, TS562: Pt100/Pt1000) can be selected per channel.
- The unit presents the temperature data in the basic I/O area of the PLC occupying from 3 to 6 CIO words
- Cold junction compensation (TS561) is provided internally.
- Adjustable filtering allows mains frequencies (50/60 Hz) to be suppressed.
- Broken wire (TC/RTD)and short-circuit alarms (RTD) are provided as error code in the PLC, and by LED indication.
- The unit does not provide galvanic isolation between the input signals.

CJ1W-AD□□□(SL)

Analog Input Units

Convert Analog Signals to Binary Data

- · Wire burnout detection
- Peak-hold function
- · Mean function
- · Offset gain setting
- · Range selection per intput
- 1/8000 resolution
- 2 ms conversion time for 8 channels

Function

Convert input signals such as 1 to 5 V or 4 to 20 mA to binary values between 0000 and 1F40 Hex and store the results in the allocated words each cycle. The ladder diagram can be used to transfer the data to the DM Area or the SCALING instructions (e.g., SCL(194)) can be used to scale the data to the desired range.

Analog I/O Unit 201

CJ1W-PTS5□

Process Input Units

Directly Input Four Temperature Sensors

- Up to four temperature sensor inputs can be directly connected to a single Unit (input signal/ range shared by the four inputs)
- Models with isolation between channels prevent unwanted current paths between Temperature Sensor inputs.
- Measurement value alarm with hysteresis/ON delay (two inputs per channel, one of which can be set as a DO output from the Unit).
- High-resolution, high-speed 2 channel input models provide configurable alarms and maintenance functions

Function

Converts the measured value of DC voltage/current signals, thermocouple or platinum-resistance thermometer inputs (up to 4 points) into binary or BCD code, and stores in the allocated memory area every cycle. The ladder program can be used to transfer the data to a specified words in data memory for use.

CJ1W-TC□□

Temperature Control Units

One Unit Functions as Four Temperature Controllers

- Supports 2-loop or 4-loop PID control or ON/OFF control.
- The PID constants for PID control can be set using auto-tuning (AT).
- Select either forward (cooling) operation or reverse (heating) operation.
- Input directly from temperature sensors. (Thermocouples: R, S, K, J, T, B, or L; or platinum resistance thermometers: JPt100 or Pt100.)
- · Open collector output
- · Sampling period: 500 ms
- RUN/STOP control.
- Two internal alarms per loop.
- With 2-loop models, a current transformer can be connected to each loop to detect heater burnout.

Function

Perform PID control (two degrees of freedom) or ON/OFF control based on inputs from thermocouples or platinum resistance thermometers to control open collector output. Four-loop models and two-loop models (with heater burnout detection function) are available. Words allocated to the Unit in memory can be manipulated from the ladder diagram to start/stop operation, set the target value, read the process value, or perform other operations.

CJ1W-NC□□

Position Control Units

High-speed, High-precision Positioning with 1, 2, or 4 Axes

- Simple positioning systems can be created by directly specifying operation from the CPU Unit when required.
- Positioning data is saved in internal flash memory, eliminating the need to maintain a backup battery.
- Use Windows-based Support Software (CX-Position) to easily create positioning data and store data and parameters in files.
- S-curve acceleration/deceleration, forced starting, and other features also supported.
 - Position, speed and acceleration settings can be changed during operation
 - Speed and acceleration can be modified during Jog operation
 - Parameters and data are easily backed up to a memory card in the CPU unit

Function

These Position Control Units support open-loop control with pulse-train outputs. Position using automatic trapezoid or S-curve acceleration and deceleration. Models available with 1, 2, or 4 axes. Use in combination with servomotors or stepping motors what accept pulse-train inputs.

Position Control Units 207

CJ1W-MCH71 - MECHATROLINK-II

Motion Control Unit

Multi-axes Motion Control over high-speed MECHATROLINK-II

- · Up to 30 axes controlled with minimum wiring
- High-speed bus MECHATROLINK-II is specially designed for Motion Control
- Supports Position, speed and Torque control
- Electronic CAM profiles and axes synchronization
- · Hardware registration input for every axis
- Program control commands, like Multi-task programming and branching commands, and various arithmetic operations for maximum program efficiency
- · Access to the complete system from one point

Function

Multi-axes control is made easy by freely combining control axes. Up to 32 axes can be used, including 30 physical axes and two virtual axes, and each axis can be set individually. Position Control, synchronized control (electronic gear, electronic Cam, follow-up), speed control, and torque control are all supported, enabling a wide range of applications. By using the high-speed servo communications MECHATROLINK-II, motion programs, system parameters, system data, and servo drive parameters can be set and read from the software tool.

		Ivida allocated words)				
Minimum setting unit		1, 0.1, 0.01, 0.001, 0.0001 (Unit: mm, inch, degree, pulse)				
Maximum command va	alue	-2,147,483,648 to 2,147,483,647 pulses (32 bits with sign); infinite axis feed mode supported. Example: 16,384 pulses/rev after multiplication, a minimum setting unit of 0.001 mm and 1 mm/rev				
0	10	would result in –1,310,720,000 to 1,310,719,999 command units.				
Control functions by command from	Servo lock/unlock	Locks and unlocks the servo driver.				
CPU Unit	Jogging	Executes continuous feeding for each axis independently at the speed system parameter times the override.				
or o orm	Origin search	Determines the machine origin in the direction set in the system parameters. Can be executed with an absolute encoder.				
		Sets the origin for when an absolute encoder is used. (Offset value: 32 bits [pulses] with sign)				
	Machine lock	Stops the output of move commands to axes.				
	Single block	Executes motion programs one block at a time.				
Control functions by motion program	Positioning (PTP)	Executes positioning independently for each axis at a specified speed or the speed system parameter. (Simultaneous specification: Up to eight axes/block, Simultaneous execution: Up to 32 blocks/Unit)				
	Linear interpolation	Executes linear interpolation for up to eight axes at a time at the specified interpolation feed speed. (Simultaneous specification: Up to eight axes/block, Simultaneous execution: Up to 32 blocks/system)				
	Circular interpolation	Executes circular interpolation for two axes in either clockwise or counterclockwise at the specified interpolation feed speed. Helical circular interpolation is also possible with single-axis linear interpolation added. (Simultaneous specification: Two or three axes/block, Simultaneous execution: Up to 16 blocks/system)				
	Other functions	Origin searches, interrupt feeding, timed positioning, traverse positioning, independent electronic CAM, synchronized electronic CAM, link operation, electronic gear, follow-up synchronization, speed reference, torque reference				
Acceleration/decelerati acceleration/decelerati		Trapezoidal or S-curve, 60,000 ms max. (S-curve: Constant 30,000 ms max.)				
External I/O		One port for MECHATROLINK-II Servo communications, one deceleration stop input, two general inputs, two general outputs				
Feed rate		Rapid, interpolation feed rate: 1 to 2,147,483,647 (command units/min)				
Override		0.00% to 327.67% (setting unit: 0.01%; Can be set for each axis or task.)				
Motion programs	Number of tasks, number of programs	Up to 8 tasks and 256 programs/Unit (8 parallel branches per task max.)				
	Program numbers	0000 to 0499 for main program; 0500 to 0999 for subroutine				
	Program capacity	In motion program conversion, 8,000 blocks/Unit max. (2 Mbytes); number of blocks: 800				
	Data capacity	Position data: 10,240 points/Unit; Cam data: 32 max.; 16,000 points/Unit				
	Subroutine nesting	Five levels max.				
	Start	Programs in other tasks can be started from a program.				
	Deceleration stop	Decelerates to a stop regardless of the block.				
	Block stop	Decelerates to a stop after the block being executed is ended.				
	Single block	Executes the program one block at a time.				
Data exchange with CPU Unit	Words allocated to Unit in CIO Area	Uses one unit number (25 words). Used for Unit and tasks: 11 to 25 words (depending on the number of tasks)				
	Words allocated to Unit in DM Area	Uses one unit number (100 words). Used for Unit and tasks: 32 to 74 words (depending on the number of tasks)				
	Any area (bits)	Axes: 0 to 64 words (depending on the maximum axis number used)				
	Any area (data)	Axes: 0 to 128 words (depending on the maximum axis number used)				
	Any area (data)	General I/O: 0 to 1,280 words (depending on the settings)				
Saving programs and o	data	Memory Card backup (in CPU Unit, 100,000 times max.)				
Self-diagnostic function	ns	Watchdog, RAM check, etc.				
Error detection function	ns	Deceleration stop inputs, unit number errors, CPU errors, software limit errors, etc.				
Error log function		Read by IORD instruction from CPU Unit.				
Support Software		Microsoft Windows 2000 or NT 4.0 (Processor: Pentium, 100 MHz min., with at least 64 MB of memory)				
External power supply	voltage	24 V DC (21.6 to 26.4 V DC)				
Internal current consur		0.6 A or less for 5 V DC				
Weight (not including of		300 g max.				
, , , , , , , , , , , , , , , , , , ,	,					

Note: 1. Take the following factors into account when mounting Motion Control Units under a single CPU Unit:

- The maximum number of CPU Bus Units that can be allocated words in the CPU Unit
- The capacity of the Power Supply Unit on each CPU Rack or Expansion I/O Rack and the current consumption of the Units mounted on the Rack (For details, refer to the Operation Manual for the CPU Unit.)
- ${\bf 2.}\;$ The required power supply must be provided by the user.
- 3. A Memory Card must be used to add system software functions to the CPU Unit in order to use IOWR and IORD.

Motion Control Unit 209

CJ1W-NCF71 - MECHATROLINK-II

Position Control Unit

Multi-axes Position Controller over highspeed MECHATROLINK-II

- Up to 16 axes controlled with minimum wiring. Only one cable between devices is needed.
- High-speed bus MECHATROLINK-II is specially designed for Motion Control
- Supports Position, speed and Torque control
- Positioning can be done by direct Ladder commands.
- Access to Servo Drives parameters can be done through PLC operation
- Access to the complete system from one point. Network setup, Servo Drives configuring and monitoring, and PLC Programming.

System Configuration

	Torque command range for torque control	-199.999% to 199.999%				
Control functions	Servo lock/unlock	The upper limit is restricted by the maximum torque of the Servomotor. Locks and unlocks the Servo Driver.				
Control lunctions	Position control	Positions to an absolute position or relative position according to the specified target position and tar-				
	Position control	get speed specified from the ladder program.				
	Origin determination	 Origin search: Establishes the origin using the specified search method. Present position preset: Changes the present position to a specified position to establish the origin. Origin return: Returns the axis from any position to the established origin. Absolute encoder origin: Establishes the origin using a Servomotor that has an absolute encoder, without having to use an origin search. 				
	Jogging	Outputs a fixed speed in the CW or CCW direction.				
	Interrupt feeding	Performs positioning by moving the axis a fixed amount when an external interrupt input is received while the axis is moving.				
	Speed control	Performs speed control by sending a command to the Servo Driver speed loop.				
	Torque control	Performs torque control by sending a command to the Servo Driver current loop.				
	Stop functions	 Deceleration stop: Decelerates the moving axis to a stop. Emergency stop: Positions the moving axis for the number of pulses remaining in the deviation counter and then stops the axis. 				
Auxiliary functions	Acceleration/deceleration curves	Sets either a trapezoidal (linear) curve, an exponential curve, or an S-curve (moving average).				
	Torque limit	Restricts the torque upper limit during position control.				
	Override	Multiplies the axis command speed by a specified ratio. Override: 0.01% to 327.67%				
	Servo parameter transfer	Reads and writes the Servo Driver parameters from the ladder program in the CPU Unit.				
	Monitoring function	Monitors the control status of the Servo Driver's command coordinate positions, feedback position, current speed, torque, etc.				
	Software limits	Limits software operation for controlling positioning.				
	Backlash compensation	Compensates for the amount of play in the mechanical system according to a set value.				
External I/O	Position Control Unit	One MECHATROLINK-II interface port				
	Servo Driver I/O	CW/CCW limit inputs, origin proximity inputs, external interrupt inputs 1 to 3 (can be used as external origin inputs)

Applicable Servo Drive		SGDH-□□□E models (Version 38 or later)				
Installation Method		Mounted on the SGDH Servo Drive side: CN10.				
Basic	Power Supply Method	Supplied from the Servo Drive control power supply.				
Specifications	Power Consumption	2 W				
MECHATROLINK -II Communications	Baud Rate / Transmission Cycle	10 MHz / 500 ms or more. MECHATROLINK-II communications				
Command Format	Operation Specification	Positioning using MECHATROLINK-I/II communications.				
	Reference Input	MECHATROLINK-I/II communications Commands: Motion commands (position, speed), Interpolation commands, Parameter read/write, Monitor output				
Position Control	Acceleration/Deceleration Method	Linear first/second-step, asymmetric, exponential, S-curve				
Functions	Fully Closed Control	Position control with fully closed feedback is possible.				
Fully Closed	Fully Closed Encoder Pulse Output	5 V differential line-driver output (complies with EIA Standard RS-422A)				
System	Fully Closed Encoder Pulse Signal	90° Phase difference 2-phase differential pulse (phase A, phase B)				
Specifications	Maximum Receivable Frequency for Servo Drive	1 Mpps				
	Power Supply for Fully Closed Encoder	To be prepared by customer.				
Input Signals	Signal Allocation Changes Possible	Forward/reverse run prohibited, Zero point return deceleration LS External latch signals 1, 2, 3 Forward/reverse torque control				
Internal Functions	Position Data Latch Function	Position data latching is possible using phase C, and external signals 1, 2, 3				
	Protection	Parameters damage, Parameter setting errors, Communications errors, WDT errors, Fully closed encoder detecting disconnection				
	LED Indicators	A: Alarm, R: MECHATROLINK-I/II Communicating				

Nomenclature

CJ1W-NCF71 - Position Control Unit

CJ1W-CT021

High-speed Counter Unit

High-speed, flexible control with a wide array of features

- Input frequencies to 500 kHz.
- 32-bit counting range.
- · Variable digital noise filter provided.
- 5-/12-/24-V line driver inputs
- Supports simple, ring, and linear counting modes.
- Supports two external control inputs, and a total of 16 functions can be set: open gate, close gate, preset, reset, capture, stop/capture/reset combinations, reset enable, and more.
- One Unit supports two external outputs and 30 internal outputs with counter value zone comparisons, target comparisons, delays, holds, programmable outputs, and hysteresis settings.
- · Pulse rate measurement function and data logging.
- Counter outputs and external control inputs can be used to trigger interrupt tasks in the CPU Unit.

Function

The High-speed Counter Unit counts pulse signal inputs that are too fast to be detected by normal Input Units. The Unit can be programmed

to produce outputs according to counter values for specified conditions, and many other functions are supported.

System Configuration

Unit name	High-speed Counter Unit	High-speed Counter Unit						
Classification	Special I/O Unit							
Unit numbers	0 to 92	0 to 92						
Countable inputs	2 channels	2 channels						
Counter modes	Simple counter	Linear or ring counter						
Input types	Differential phase inputs (x1)	Differential phase inputs Up/Down pulse inputs Pulse and direction input (x1, x2, x4)						
Countable frequencies	50 kHz	10, 50, or 500 kHz	·					
Counter values	8000 0000 to 7FFF FFFF (-2,147,483,648 to 2,147,483,647)		7FFF FFFF (-2,147,483,648 FFFF FFFF (0 to 4,294,967,29					
Counter inputs	·	·						
Input signals	Phases A, B, and Z							
Input voltage (selected via connector)	24 V DC	5 V DC (for ch1 only)	12 V DC (for ch2 only)	Line driver				
External inputs	Number of inputs: 2	·		·				
Input voltage	24 V DC							
External outputs	Number of outputs: 2 (switchable bet	tween NPN and PNP)						
External power supply	10.2 to 26.4 V DC							
Max. switching capacity	ty 46 mA at 10.2 V to 100 mA at 26.4 V							
Response time	0.1 ms max.	0.1 ms max.						
Leakage current	0.1 mA max.	0.1 mA max.						
Residual voltage	1.5 V max.	1.5 V max.						
Control methods	Simple counter: Forced ON/OFF, Linear counter: Forced ON/OFF, zone comparison, and target comparison							

CJ1W-CTL41-E

4-Channel Counter Unit

- 4 independent counter channels for encoder or pulse train inputs
- · 4 Counter channels with 32-bit counter value
- Linear or circular counter mode selectable per channel.
- Max. input pulse frequency 100 kHz, or 400 k counts/second in quadrature mode
- 32 comparison values (8 per channel) can be used to trigger interrupts to the PLC CPU
- Counter channel settings can be reconfigured onthe-fly
- Input level: line driver (24 V inputs through dedicated terminal block).
- Easy connection (line driver or 24V) by using XW2G-40G7-E screwless terminal block)

Function

This Unit offers an economical way to acquire position information from up to four encoders, or to count fast pulse trains up to 100 kHz. Dynamically adjustable counter comparison values offers flexibility in triggering interrupts to the PLC with sub-millisecond response.

System Configuration

Terminal arrangement

	Pin No.	Signal	Pin No.	Signal
	40	Not Connected	39	Not Connected

Counter Modes	Linear, Circular
Counter Values	8000 0000 to 7FFF FFFF (-2,147,483,648 to 2,147,483,647)
Comparison values	8 values or 4 ranges per channel
Input Types	Differential Phase Inputs (1x, 2x, 4x) Pulse Up/Down Inputs Pulse + Direction Inputs
Input Voltage	RS422 Line Driver compatible level 24V via XW2G-40G7-E terminal block
Max. input Frequency	100 kHz (A and B signals)

CJ1W-CTS21-E

SSI Encoder Input Unit

2 independently configurable inputs for SSIcompatible sensors

- SSI (synchronous serial interface) is a standard communication protocol mainly used for absolute encoders or distance measurement systems.
- It provides more flexibility, easier connection and reduced wiring compared to parallel connection of absolute encoders.

Function

The Units sets up and maintains data communication with up to two SSI slave devices. Extensive setting options allow matching the coding, baud rate or data length of any SSI device.

SSI Communication

Item	Specification
CLK lines	Non-isolated differential line driver, RS422 compliant
DATA lines	Electrically isolated differential line receiver, RS422 compliant
Number of data-bits	9 to 31 (default: 24)
Value coding	Gray / Binary / Tannenbaum / Raw (default: Gray)
Clock frequency	100 kHz to 1.5 MHz
Monoflop time	10 μs to 99.990 μs (default: 40 μs)
Sample rate	About 2,500 Samples/sec with 2 encoders connected (with default settings

Terminal arrangement

Item	Description Row B	Termin	al no.	Description Row A

	SCU21-V1	Port 2: RS-232C				(see note 1.)				note 2.)

Note: 1. CPU Unit Ver. 3.0 and Serial Communications Unit Ver. 1.2 or later only.

2. Gateway to Host Link FINS is also possible.

Example Serial Communications Configuration

Protocol Macros

Easily Create Protocols for Data Exchange with External Devices Using One Instruction

Function

Data transfer protocol for serial communications vary with the manufacture and with devices. Differences in protocols can make communications between devices by different manufactories very difficult, even when electrical standards are the same.

OMRON's protocol macros solve this problem by enabling easy creation of protocol macros designed to match the protocol of a connected device. Protocol macros will let you communicate with essentially any device with an RS-232C, RS-422, or RS-485 port without having to write a special communications program.

PLCs with Protocol Macros

The Two Main Functions of Protocol Macros

1. Creating Communications Frames

The communications frames can be easily created according to the specifications required by the connected device. Data from I/O memory in the CPU Unit can be easily included as part of a communications frame to read from or write to I/O memory.

2. Creating Frame Send/Receive Procedures

The required processing, including sending and receiving communications frames, can be performed one step at a time according to the results of the previous step, and then CX-Protocol an be used to trace send and receive data.

Types of Protocol

Standard System Protocols

Data transfers with OMRON components can be easily performed using standard system protocols. There is no need to develop you own protocols in this case.

Component		Model	
CompoWay/F-	OMRON Compo- Way/F slave components		
Digital Con- trollers and	Small Digital Controller with Communications (53 x 53 mm)	E5CK	
Temperature Controllers	Temperature Controllers with Digital Indications (Thermac J with communications) (96 x 96 mm or 48 x 96 mm)	E5□J-A2H0	
	Digital Controllers with Communications (96 x 96 mm)	ES100□	
	High-density Temperature Controller with communications (8 control points)	E5ZE	
Intelligent Sigr	nal Processors	КЗТ□	
Bar Code	Laser Scanner type	V500	
Readers	CCD type	V520	
Laser Microme	eter	3Z4L	
Visual Inspec-	High speed, high precision, low cost	F200	
tion Systems	High-precision inspection/positioning	F300	
	Character inspection software/positioning software	F350	
ID Controllers	Electromagnetic coupling (for short distances)	V600	
	Microwave (for short distances)	V620	
Hayes Modem	AT Command		
C-series PLCs	PLC with Host Link (C mode) protocol		
CS/CJ-series CVM1/CV-seri	PLC with Host Link (FINS) pro- tocol		
Mitsubishi PLC	Cs (Sequencer CPU Modules) (See note.)	PLC with Computer Link (Acompatible, 1C frame, model 1) slave functions.	

Note: Serial Communications Unit Ver. 1.2 or later only.

User-created Protocols

Data transfers with non-OMRON components can be easily created just by defining parameters using the CX-Protocol Windows tool.

Other Protocols

Host Links

Host Link (C-mode) commands or FINS commands placed within host link headers and terminators can be sent to a host computer to read/write I/O memory, read/control the operating mode, and perform other operations for the PLC.

Unsolicited messages can also be sent from the PLC to the host computer by sending FINS commands from the ladder program using the SEND(090), RECV(098), and CMND(490) instructions.

Custom Protocols

I/O instructions for communications ports (TXD/TXDU, RXD/RXDU) can be used for simple data transfers (custom protocols), such as to input data from bar code readers or output data to a printer. Start/end codes can be specified, and RS, CS, and other control signals can be handled.

1:N NT Links with High-speed Links

The PLC can be connected to a Programmable Terminal (PT) via RS-232C or RS422A/485 ports, and I/O memory in the PLC can be allocated to various PT functions, including status control areas, status notifications areas, touch switches, lamps, memory tables, and other objects.

Note: Either one or up to eight PTs can be connected to a PLC in 1:N NT Links.

High-speed NT Links that are three times faster are possible with the NS Series and version 2 of the NT631 and NT31 Series. This speed is particularly important when connecting to more than one PT.

Serial Gateway Function <u>NEW</u> (CPU Unit Ver. 3.0 or later, Serial Communications Unit Ver. 1.2 or later only)

When a FINS command containing a CompoWay/F command is received via network or serial communications, the command is automatically converted to a protocol suitable for the message and forwarded using serial communications. This enables access to CompoWay/F-compatible components from a personal computer, PT, or PLC via a network.

Serial PLC Links (CJ1M CPU Unit's Built-in RS-232C Port)

Allows many applications to be easily achieved, such as exclusive control between PCB loaders and unloaders and temperature information and time management between conveyor ovens. Up to 9 CJ1M CPU Units can be connected, with up to 10 words of data between them managed by the built-in RS-232C port. The RS-232C can be converted to RS-422A simply by using a CJ1W-CIF11 RS-422A Conversion Adapter.

CS1W-SCU□1-V1

Serial Communication Unit

Support Protocol Macros, Host Link Communications, and 1:N NT Links

 Mount up to 16 Units (including all other CPU Bus Units) on CPU or Expansion Racks. Ideal for systems that required many serial ports.

Function

The SCU21 and SCU41 CPU Bus Unit can be used to increase the number of serial ports (RS-232C or RS-422A/485) two at a time. The SCU21 provides two RS232C ports, the SCU41 has one RS232C port and one RS422/RS485 port. Specify Serial Gateway, Protocol Macros,

Host Link Communications, or 1:N NT Links separately for each port. With the CJ Series, you can easily provide the right number of serial ports for your system.

System Configuration

Serial Communication Unit

CJ1W-CIF11

RS-422A Adapter

Converts RS-232C to RS-422A/RS-485

- Use to convert RS-232C to RS-422A/RS-485.
- Simply connect this Adapter to the built-in RS-232C port or an RS-232C connector on a Serial Communications Unit (D-sub, 9-pin) to convert to RS-422A/RS-485).

NT-AL001

RS-232C/RS-422A Adapter Unit

- Long-distance transmissions are possible through an RS-422A interface. By converting from RS-232C to RS-422A and then back to RS-232C, a transmission distance of up to 500 m can be achieved.
- No power supply is required. If the 5-V terminal (150 mA max.) is connected from the RS-232C device, a separate power supply is not required to drive the Adapter Unit.
- Duct wiring can be used. The removable terminal block enables wiring not possible with D-sub connectors. (The RS-232C interface is 9-pin D-sub.)

Function

The NT-AL001 is used to connect a PT or other device with an RS-232C terminal to a device with an RS-422A terminal, or an RS422A multi-drop network..

Communications Specifications

General Specifications

Item	Specification
Rated power supply voltage	+5 V ±10%
	(Use pin 6 on the RS-232C connector.)
Rated current consumption	150 mA max.
Rush current	0.8 A max.
Weight	200 g max.

Item	Specification
Baud rate	64 Kbps max. (depends on RS-232C baud rate)
Transmission distance	500 m max.
Terminal block	8 terminals, M3.0; detachable

Dimensions

Note: Units are in mm unless specified otherwise.

With RS-422A terminal block cover closed: 30 \times 114 \times 100.2 mm (W \times D \times H) With RS-422A terminal block cover open: 30 \times 114 \times 119.5 mm (W \times D \times H)

CJ1W-V600C1

RFID Sensor Units

Process RFID tag data directly in the control system.

- Models available to connect to either one R/W Head or two R/W Heads.
- High-speed data communications with the CPU Unit (160 bytes/scan).
- Efficient programming with control bits and data located in different interface areas.
- Common operating methods for both Single-head and Double-head Units to effectively apply programming resources through modularization.
- Status confirmation function without CPU Unit program for faster system setup.
- Power supply error flags and processing provide debugging information (communications TAT and error codes) for easier maintenance.

Function

The ID Sensor Unit interfaces to the V600-series RFID System's Amplifiers and Read/Write Heads and is used together with V600 Data Carriers.

System Configuration

Combine Products and Information

Data Carriers attached to the products being manufactured are used to handle the flow of control and management information on the production line. They can also be used to automatically collect and manage quality information.

Autonomous Control

The information required for production is provided from the product itself, enabling the creation of an autonomous control system that does not need to rely on a host.

Modularization of Control Processes

The required information is available when it is required, enabling simple separation of control processes into autonomous modules.

Specifications

Item	CJ1W-V600C11		CJ1W-V600C12			
Data transfer speed	160 bytes/scan (between CPU Unit and ID Sensor Unit)

- Note: 1. For the baud rate of 500 kbps.
 - 2. For the baud rate of 125 kbps.
 - 3. For the high-speed communications mode (trunk length: 100 m) (30 m max. when using 4-conductor VCTF cable or special flat cable)

224 Programmable Controllers

Communications Networks

Ethernet: Information Network

Use an Ethernet Network to organically link production management with the production site using various communications services.

Remote Programming and Monitoring

CX-Programmer running on a computer connected to the Ethernet Network can be used to program and monitoring all the PLCs connected to the Ethernet Network.

Socket Service

Transfer data using either UDP or TCP protocol.

Mail Service

Send electronic mail from the PLC to a host computer when a flag turns ON, when an error occurs, or at scheduled times.

FINS Message Service

Send FINS message between PLCs or between PLCs and host computers. The Ethernet FinsGateway can be used to handle messages from applications without having to program FINS commands directly.

FTP Service

Use the FTP to transfer files between Memory Cards in the CPU Unit and computer memory.

Controller Link: Control Network

Controller Link can easily connect PLCs at the factory site in a fully functional FA network.

Easy Network Construction with Twisted-pair Cables

Repeater Units Enable T-branch Wiring, Extension, Expansion, or Optical Sections in Networks

More Flexibility in Wiring for Layout, Construction, and Expansion Using T-branches

Repeater Units can be used for branching, making complicated wiring paths unnecessary. This method reduces wiring labor, and modularization of equipment into Repeater Units.

Data Links

Efficient, large-capacity data links can be flexibly created between PLCs and between PLCs and host computers. The Controller Link FinsGateway can be used to handle data links from applications without having to program FINS commands directly.

Remote Programming and Monitoring

CX-Programmer connected via RS-232C can be used to program and monitor PLCs on the Controller Link Network.

FINS Message Communications

Large volumes of data can be transferred between PLCs and host computers whenever necessary. The Controller LInk FinsGateway can be used to handle messages from applications without having to program FINS commands directly.

DeviceNet: Component Network

Create a multi-vendor network for multibit communications for lower-level PLCs that need to handle both control signals and data.

Remote I/O Communications

Large-capacity remote I/O can be freely allocated according to application needs.

Select from a Wide Range of Slaves (Connection Possible to Data-intensive Devices)

Connect contact I/O, analog I/O, temperature inputs, sensor (photo-electric or proximity) inputs, and small PLCs (e.g., CQM1).

Message Communications

Send FINS messages between OMRON PLCs and Explicit message between OMRON PLCs and devices from other makers.

Use MULTIPLE I/O TERMINALs as DeviceNet Slaves

I/O can be expanded through one-step connections. Special I/O and explicit messages are also supported.

Connect to DeviceNet Products from Other Manufacturers

CompoBus/S: High-speed ON/OFF Bus

Construct a high-speed remote I/O system under the PLC to reduce wiring for sensors and actuators inside machines.

High-speed Remote Communications at 1 ms or Less

In the High-speed Communication Mode, you can link up to 32 slaves (up to 128 input and 128 output points) with a high-speed communications cycle of 1 ms or less (0.5 ms with up to 16 slaves, 64 input and 64 output points).

High-speed and Long-distance Communications Modes

A switch enables switching between the previous High-speed and a new Long-distance Communications Mode.

- High-speed Mode: 100-m communications distance at 750 Kbits/s (with 2-conductor VCTF cable)
- Long-distance Mode: 500-m communications distance at 93.75 kbits/ s (with 2-conductor VCTF cable)

Reduced Wiring with Special Cables

Connect with special Flat Cables or VCTF Cables.

A Slave for Essential Any Application

Contact I/O, Contact I/O Modules, Photoelectric/Proximity Sensor Input Slaves are provided along with Analog Input and Analog Output Slaves.

No-restriction Branching in Long-distance Communications Mode

With special Flat Cables or 4-conductor VCTF Cables, you can branch and wire in any required structure for up to a total distance of 200 m.

CJ1W-ETN21

Ethernet Unit

Enables fast data transfer within Factory Automation systems, and easily links FA systems to plant management systems

- Use the standard Ethernet protocools, TCP/IP and UDP/IP, and OMRON's standard FINS message communications.
- FINS routing provides seamless communication with Controller Link, DeviceNet and other networks.
- Access data files in PLC memory or on Compact-Flash cards using the Unit's FTP server function.
- Freely configurable communications using socket services
- Send e-mails automatically upon preset conditions, including embedded data in the e-mail body, or with data file attachments.
- Receive e-mails (POP3), including commands to the PLC, with password protection.
- Automatic correction of the PLC clock using SNTP function.
- DNS Client function allows server access by host name
- Set communications parameters with CX-One's setup menus or the HTML setup pages.

Function

Achieve a wide range of communications from PLCs connected to an Ethernet network: Transfer data with TCP/IP or UDP/IP socket services, executed OMRON's standard FINS commands, transfer files with FTP, or send mail with SMTP. Select the communications services that are required and flexibly connect PLCs on an information level Ethernet network.

Specifications

Classification	Communications services	Unit numbers	Connector	Model
	FINS communications service (TCP/IP, UDP/IP), FTP server functions, socket services, mail transmission service, mail receive, automatically adjusted PLC built-in clock (remote command receive), server/host name specification.	(/	100Base-TX (10Base-T)	CJ1W-ETN21

Ethernet Unit 229

CJ1W-CLK21-V1

Controller Link Units

Simpler Controller Link Wiring, Startup, and Construction Provides Larger-capacity Data Links, Greater Flexibility in Area Control, and Supports Multiple Sub-networks

Function

The data link capacity is 20,000 words per node. Allocate both Data Link Area 1 and Area 2 in the same area. Connect up to 8 Units under a single CPU Unit. (Unit Ver. 1.2 only)

Using Wired Controller Link Units together with Repeater Units allows network configurations for essentially any application, including T-branching, long-distance applications, applications with up to 62 nodes, or applications with optical sections in a wired network. Models are also

available that enable changes in configurations and automatic 1:N communications while data links are active.

Huge increase in amount of data that can be collected from devices.

Number of data link send/receive words (total of Area 1 and Area 2) for a single Controller Link Unit increased from 12,000 to 20,000 words.

The same Memory Area can be used for the Data Link Areas. For example, Data Link Areas 1 and 2 can be both allocated and managed in EM Bank 0.

Area 1 and Area 2 had to be allocated in separate Memory Areas for user-set data links. Therefore, allocating all data links in the EM Area was not possible.

New CS/CJ-series Controller Link Units (Wired/Optical Ring Units) enable both Areas 1 and 2 to be allocated in the same Memory Area when using user-set data links. Provided addresses do not overlap, the same Memory Area can be used, making area control easier.

Control up to 8 Controller Link sub-networks as a group from the host network.

Previous Units supported connection of up to four Controller Link Units to a single CPU Unit. Creating a gateway to the host network to control the Controller Links as a group of sub-networks required dividing the Units between two PLCs with a maximum of four networks for a single PLC.

New CS/CJ-series Controller Link Units (Wired/Optical Ring) enable connection of up to 8 Controller Link Units for each CPU Unit. This enables easy centralized control of a group of Controller Link subnetworks from the one PLC.

System Configuration

Use Repeater Units for T-branch Wiring, Extension, Expansion, and Optical Sections

T-branching Enables More Flexible Wiring Solutions for Layout, Building, and Expansion of Networks

Repeaters can be used for branching, so long lines are not required. As a result, wiring labor is reduced, and modularization is achieved in Repeater units.

or changes to connections

Wired Types Support Long-distance Extension

The total extended length that was previously 500 m at 2 Mbps can be extended to up to 1.5 km by using $\,$ two Repeater Units.

Connect up to 64 Nodes Using Wired Types

Networks can be constructed with up to 62 nodes when Controller Link Units/Support Boards with -V1 suffix are combined with Repeater Units.

Wiring with Optical Cables Increases Noise Immunity

Using two Repeater Units for optical ring enables wiring with optical cables in parts of the network subject to noise.

Simpler, More Flexible Data Links

Change Data Link Tables While Data Links Are Active

- When data link tables are changed due to additional nodes or other networking changes, data link tables can be transferred without stopping any data link communications.
- Flexible system configurations can be changed by combining node expansion using Repeater Units.

Specifications for Networks Using Repeaters

Item	Segment (See note 1.)	Total network
Transmission path configuration	Multi-drop	Tree (using Repeaters to connect each segment)
Baud rate/maximum transmission dis-	2 Mbps: 500 m	2 Mbps: 1.5 km
tance (See note 2.)	1 Mbps: 800 m	1 Mbps: 2.4 km
	l '	500 kbps: 3.0 km
Maximum number of nodes	Controller Link Unit + Repeater Unit	Controller Link Unit: 62 nodes (using a Controller
	Total number of nodes: 32	Link Unit that supports 62 nodes)
Maximum number of Repeater levels		2 levels
(See note 3.)		

- Note: 1. Specifications for each segment are the same as for Wired Controller Link networks.
 - 2. Maximum transmission distance: Total wired cable length between the two nodes separated by the longest total wired cable length.
 - 3. Maximum number of Repeater levels: Maximum number of Repeaters in a path linking any two nodes. For optical ring types, one set of two Units comprises one level.

CJ1W-DRM21

DeviceNet Unit

Multivendor, Multibit Network

- Control of up to 32,000 points (2,000 words) per master
- Remote I/O communications can be allocated in any area using DM settings.
- 16 DeviceNet Units can be mounted for each CPU Unit (3 max. for fixed allocations).
- When using the Configurator (see note), remote I/O can be allocated in an order independent of node address.

Note: The Configurator is allocating a node-address if connected to DeviceNet using a DeviceNet communication card. It is not doing this if connected through the serial communications interface of the CPU.

- DeviceNet Units can be used as a master and a slave, and this functionality can be used simultaneously.
- DeviceNet Units allow DeviceNet networks to be treated exactly like Controller Link, Ethernet, or other networks for message communications or remote programming and monitoring by CX-Programmer.

Function

OMRON supports the DeviceNet open field network, a multivendor network for machine/line control and information. The following types of communications are possible.

- Remote I/O communications for automatic data transfers between the CPU Unit and Slaves (with no programming in the CPU Unit).
- Explicit message communications. This can be programmed from the CPU unit (IOWR and CMND instructions) and read from/write to other DeviceNet units.
- With explict message communication FINS commands can be send to other devices that support FINS messaging.

System Configuration

CJ1W-CORT21

CAN Unit

Sending and Receiving 11- or 29-bit CAN messages

The CAN communication protocol is widely used in all kinds of aplications. Benefits are its high reliabilty, low price and ease of implementation. But for two CAN devices to understand eachother they must speak the same protocol (language). Many implementers of CAN comunication have made their own protocol. The User Defined CAN Unit has the possibility to adapt to any protocol by configuration. This makes it possible to add a PLC and all its opennes, features and extensions to what was once a proprietary solution.

Function

The Unit can send and receive 11- or 29-bit CAN messages. The identifier, datalength and data of the CAN message and the way the CAN message is send (On time, trigger or change) are set buy FINS commands

ISO/OSI Reference Model

CAN communication describes only layers 1 and 2, the Physical and the Datalink Layer. Layer 7, the Application Layer is normally described in protocol standards like CANopen and DeviceNet.

Layer 7	Application Layer			
Layer 3-6				
Layer 2	Data Link Layer			
	Logical Link Control: LLC			
	Acceptance filtering, overload notification, recovery management			
	Medium Access Control: MAC			
	Data encapsulation and decapsulation frame coding, stuffing medium access management error detection error signalling acknowledgement serialization, deserialization			
Layer 1	Physical Layer			
	bit encoding / decoding bit timing synchronization			

11-bit identifier CAN frame

Arbitration Field	d Control Data Field	CRC Ack End of INT Bus idle
S O 11 bit IDENTIFIER	R I r T D o DLC 0 - 8 bytes 15 R E	5 bit CRC

Applications

Monitoring of diesel-engines and drivetrains in trucks and bus

Robot Control

Specifications

Item	Classification: Special CPU Unit
	CJ1W-CORT21
Unit number	0 to 15
CAN communication	Any baud rate can be set Transmit and receive 11- or 29-bit CAN messages Transmit messages on time, trigger, or data change
Configuration	Status and control words provide straightforward operation. All configuration data can can be changed on-line by FINS commands. Up to 640 identifiers can be configured for message filtering. Up to 640 different identifiers can be configured for transmission.

CAN Unit 235

CJ1W-PRM21

PROFIBUS-DP Master unit

- PROFIBUS-DP master class one with support of DP-V1 data types.
- 7 kWord I/O
- Simple configuration through FDT/DTM based configurator
- · Special CPU unit
- Handles data independent of the CPU unit, thus reducing CPU load

Function

The CJ1W-PRM21 is a PROFIBUS-DP Master Class1 device (DPM1).

It exchanges I/O data and communication/status information with the CPU of the PLC and I/O data and diagnistics information with PROFIBUS-DP slave stations on the PROFIBUS network.

The CJ1W-PRM21 can be configured via any communication interface of the PLC system. Since the configuration software uses FINS communication, configuration data and diagnostic information can be routed over Controller Link, Ethernet or serial networks through up to 8 layers.

lodel		Remarks

	Power consumption	400 mA at 5 V		
	Dimensions	90 x 65 x 31 mm		
	Weight	100 gr		
	Ambient temperature	Operating: 0 °C to 50 °C		

CJ1W-PRT21

PROFIBUS-DP slave unit

PROFIBUS-DP I/O link unit

- · Data link to any PLC data area
- Simple configuration using max. data input 100 words and max. data output of 100 words.
 Max. total exchanged data 180 words.
- CJ1 special I/O unit
- Status information overview in host PLC, plus extensive diagnostics via PROFIBUS

Specifications

Installation	Host PLC System	CJ1				
	Maximum number of Units per PLC system	40				
	Current consumption	400 mA (maximum) at 5V DC from PLC power supply				
	Weight	90 g (typical)				
Environment	Storage temperature	-20°C to +70°C				
	Operating temperature	0°C to +55°C				
	Operating humidity	10 to 90% (non-condensing)				
	Conformance to EMC- and environmental standards	EN50081-2 EN61131-2				
User Interface	Switch settings	Special I/O Machine number (00-95) by 2 rotary switch PROFIBUS-DP node address (00-99) by 2 rotary switches				
	LED Indicators	Unit status: RUN (green LED), ERC (red LED)				
		Network status: COMM (green LED), BF (red LED)				
		CPU status: ERH (red LED)				
PLC Interface	No. of CIO words allocated	PLC →Unit: 1 word control data				
		Unit →PLC: 1 word status data				
	No. of DM words allocated	Unit →PLC: 8 words of Unit setup information				
	Amount of I/O data per Unit	Fixed: 2 words CIO area (one in, one out) for Unit status + control bits. 2 words status information from the host PLC, containing operation status and error code (read from location A400). This information will be sent to the PROFIBUS master: - as extended diagnostics, only at a change of data content. - optionally, attached to the I/O data, each PROFIBUS cycle. Variable: 2 user-defined areas for PROFIBUS I/O data, with the following restrictions: - Up to 100 words input in one PLC area (CIO, H, D, EM). - Up to 100 words output in one PLC area (CIO, H, D, EM).				

PROFIBUS-DP slave unit 237

CJ1W-SRM21

CompoBus/S Master Unit

CompoBus/S is a high-speed I/O bus

- Up to 256 I/O points per Master.
- Up to 32 Slaves per Master.
- Communications cycle time: 0.5 ms (at 750 kbps).
- Communications distance: Up to 500 m (at 93.75 kbps).
- Free wiring with any branching method for up to 200 m (in long-distance communications mode).

Function

A high-speed ON/OFF bus that automatically transfers remote I/O status to the CPU Unit without any programming in the CPU Unit. High-speed remote I/O is supported by a communications cycle time of 1 ms maximum for 256 I/O points.

System Configuration

Specifications

Master

I/O points	256 (128 inputs and 128 outputs) or 128 (64 inputs and 64 outputs) (Switch-selectable)
Allocated words	For 256 I/O: 20 words (8 for inputs, 8 for outputs, 4 for status)
	For 128 I/O: 10 words (4 for inputs, 4 for outputs, 2 for status)
No. of mountable Master Units	40
Node address	8 addresses per node
No. of connectable Slaves	32
Status information	Communications Error Flags, Participation Flags

Note: Uses Special I/O Unit Area (in CIO Area).

International Standards

The standards indicated in the "Standards" column are those current for UL, CSA, cULus, cUL, NK, and Lloyd standards and EC Directives as of the end of September 2004. The standards are abbreviated as follows: U: UL, U1: UL Class 1 Division 2 Products for Hazardous Locations, C: CSA, UC: cULus, UC1: cULus Class 1 Division 2 Products for Hazardous Locations, CU: cUL, N: NK, L: Lloyd, and CE: EC Directives. Ask you OMRON representative for the conditions under which the standards were met.

Optional Products, Maintenance Products and DIN rail

Name	Specifications	Model	Standards
Battery Set	For CJ1G and CJ1H CPU Units (Use batteries within two years of manufacture.)	CPM2A-BAT01	L, CE
	For CJ1M CPU Units (Use batteries within two years of manufacture.)	CJ1M-BAT01	CE
End Cover	Mounted to the right-hand side of CJ-series CPU Racks or Expansion Racks. One End Cover is provided as a standard accessory with each CPU Unit and I/O Interface Unit.	CJ1W-TER01	UC1
DIN rail	Length: 0.5 m; Height: 7.3 mm	PFP-50N	
	Length: 1 m; Height: 7.3 mm	PFP-100N	
	Length: 1 m; Height: 16 mm	PFP-100N2	
End Plate	There are 2 stoppers provided with CPU Units and I/O Interface Units as standard accessories to secure the Units on the DIN rail.	PFP-M	

Basic I/O Units

Name	Specifications	Connection type	Model	Standards
DC Input Units	12 to 24 V DC, 10 mA, 8 inputs	terminal block	CJ1W-ID201	UC1, CE, N, L
	24 V DC, 7 mA, 16 inputs	terminal block	CJ1W-ID211(SL)	
	24 V DC, 4.1 mA, 32 inputs	one 40-pin Fujitsu connector	CJ1W-ID231	
	24 V DC, 4.1 mA, 32 inputs	one 40-pin MIL connector	CJ1W-ID232	
	24 V DC, 4.1 mA, 64 inputs	two 40-pin Fujitsu connectors	CJ1W-ID261	
	24 V DC, 4.1 mA, 64 inputs	two 40-pin MIL connectors	CJ1W-ID262	
AC Input Units	100 to 120 V AC, 7 mA (100 V, 50 Hz), 16 inputs	terminal block	CJ1W-IA111	
	200 to 240 V AC, 10 mA (200 V, 50 Hz), 8 inputs	terminal block	CJ1W-IA201	
Interrupt Input Unit	24 V DC, 7 mA, 16 inputs	terminal block	CJ1W-INT01	
High-speed Input Unit	24 V DC, 7 mA, 16 inputs	terminal block	CJ1W-IDP01	
Relay Output Units	250 V AC/24 V DC, 2 A, independent contacts	8 outputs max.	CJ1W-OC201(SL)	UC1, CE, N, L
	250 V AC/24 V DC, 2 A, independent contacts	16 outputs max.	CJ1W-OC211(SL)	
Transistor Output	12 to 24 V DC, 2 A, 8 outputs, sinking	terminal block	CJ1W-OD201	
Units	24 V DC, 2 A, 8 outputs, sourcing, load short-circuit protection, alarm	terminal block	CJ1W-OD202	
	12 to 24 V DC, 0.5 A, 8 outputs, sinking	terminal block	CJ1W-OD203	
	24 V DC, 0.5 A, 8 outputs, sourcing, load short-circuit protection, alarm	terminal block	CJ1W-OD204	
	12 to 24 V DC, 0.5 A, 16 outputs, sinking	terminal block	CJ1W-OD211(SL)	
	24 V DC, 0.5 A, 16 outputs, sourcing, load short-circuit protection, disconnection detection, alarm	terminal block	CJ1W-OD212(SL)	
	12 to 24 V DC, 0.5 A, 32 outputs, sinking	one 40-pin Fujitsu connector	CJ1W-OD231	
	24 V DC, 0.5 A, 32 outputs, sourcing, load short-circuit protection, alarm	one 40-pin MIL connector	CJ1W-OD232	
	12 to 24 V DC, 0.5 A, 32 outputs, sinking	one 40-pin MIL connector	CJ1W-OD233	
	12 to 24 V DC, 0.3 A, 64 outputs, sinking	two 40-pin Fujitsu connectors	CJ1W-OD261	
	12 to 24 V DC, 0.3 A, 64 outputs, sourcing	two 40-pin MIL connectors	CJ1W-OD262	
	12 to 24 V DC, 0.3 A, 64 outputs, sinking	two 40-pin MIL connectors	CJ1W-OD263	
Triac Output Unit	250 V AC, 0.6 A, 8 outputs	terminal block	CJ1W-OA201	
DC Input/Transistor Output Units	16 inputs, 24 V DC, 7 mA 16 outputs, 12 to 24 V DC, 0.5 A, sinking outputs	two 24-pin Fujitsu connectors	CJ1W-MD231	UC1, CE, N
	16 inputs, 24 V DC, 7 mA 16 outputs, 12 to 24 V DC, 0.5 A, sourcing, load short circuit protection, alarm	two 20-pin MIL connectors	CJ1W-MD232	
	16 inputs, 24 V DC, 7 mA 16 outputs, 12 to 24 V DC, 0.5 A, sinking outputs	two 20-pin MIL connectors	CJ1W-MD233	
	32 inputs, 24 V DC, 4.1 mA 32 outputs, 12 to 24 V DC, 0.3 A, sinking outputs	two 40-pin Fujitsu connectors	CJ1W-MD261	
	32 inputs, 24 V DC, 4.1 mA 32 outputs, 12 to 24 V DC, 0.3 A, sinking outputs	two 40-pin MIL connectors	CJ1W-MD263	
TTL I/O Unit	32 inputs, 5 V DC, 35 mA 32 outputs, 5 V DC, 35 mA/pt. 1.12 A/Unit	two 40-pin MIL connectors	CJ1W-MD563	
Temperature Input Units	6 thermocouples, J-type/K-type, no isolation between channels 6 RTDs, Pt1000, no isolation between channels	terminal block terminal block	CJ1W-TS561(SL) CJ1W-TS562(SL)	UC1, CE, L
	<u> </u>	ı		

Note: 1. Units with terminal blocks are generally available with screw connection, or with screwless clamp connection. For M3 screw connection, omit the "(SL)" from the model code.

^{2.} Units with MIL/Fujitsu connectors are not provided with a plug counterpart. Either purchase the matching connector from the list below, or use OMRON XW2Z or G79 cables to connect I/O terminal blocks to the Unit (see "Wiring Systems", page 384).

Connectors for I/O Units

Applicable Units	Name	Connection	Model	Remarks	Standards
I/O Units with terminal blocks	18-point screwless terminal block	Screwless Clamp/ card edge	CJ-WM01-18P-5	Replacement terminal blocks for I/O Units, pack of 5 pcs.	
I/O Units with Fujitsu connectors	40-pin Connector	Soldered	C500-CE404	Connector: FCN-361J040-AU Connector Cover: FCN-360C040-J2	
		Crimped	C500-CE405	Housing: FCN-363J040 Contactor: FCN-363J-AU Connector Cover: FCN-360C040-J2	
		Pressure welded	C500-CE403	FCN-367J040-AU/F	
	24-pin Connector	Soldered	C500-CE241	Connector: FCN-361J024-AU Connector Cover: FCN-360C024-J2	
		Crimped	C500-CE242	Housing: FCN-363J024 Contactor: FCN-363J-AU Connector Cover: FCN-360C024-J2	
		Pressure welded	C500-CE243	FCN-367J024-AU/F	
I/O Units with MIL connectors*	40-pin Connector	Pressure welded	XG4M-4030-T	FRC5-A040-3TOS	
	20-pin Connector		XG4M-2030-T	FRC5-A020-3TOS	

Note: * Connectors according to MIL-C-83503 , also compatible with commercially available connectors according to DIN 41651 or IEC 60603-1 specifications

Special I/O Units

Name	Specifications	Model	Standards
Analog Input Units	8 inputs (1 to 5 V, 0 to 5 V, 0 to 10 V, -10 to 10 V, 4 to 20 mA)	CJ1W-AD081-	UC1, CE, N, L
	Resolution: 1/8000, Conversion speed: 0.25 ms/point	V1(SL)	1104 OF N I
	4 inputs (1 to 5 V, 0 to 5 V, 0 to 10 V, -10 to 10 V, 4 to 20 mA) Resolution: 1/8000, Conversion speed: 0.25 ms/point	CJ1W-AD041- V1(SL)	UC1, CE, N, L
Analog Output Units	8 outputs (1 to 5 V, 0 to 5 V, 0 to 10 V, -10 to 10 V)	CJ1W-DA08V(SL)	UC1, CE, N, L
i	Resolution: 1/4000, Conversion speed: 1 ms/point max. (Settable to 1/8000, 250 µs/point)		
	8 outputs (4 to 20 mA) Resolution: 1/4000, Conversion speed: 1 ms/point max. (Settable to 1/8000, 250 μs/point)	CJ1W-DA08C(SL)	UC1, CE, N, L
	4 outputs (1 to 5 V, 0 to 5 V, 0 to 10 V, -10 to 10 V, 4 to 20 mA)	CJ1W-DA041(SL)	UC1 CF N I
	Resolution: 1/4,000, Conversion speed: 1 ms/point max.	00111 271011(02)	001, 02, 11, 2
	2 outputs (1 to 5 V, 0 to 5 V, 0 to 10 V, -10 to 10 V, 4 to 20 mA)	CJ1W-DA021(SL)	UC1, CE, N, L
Analog I/O Unit	Resolution: 1/4000, Conversion speed: 1 ms/point max. 4 inputs, 2 outputs (1 to 5 V, 0 to 5 V, 0 to 10 V, -10 to 10 V, 4 to 20 mA)	CJ1W-MAD42(SL)	LICT OF N.I.
Analog I/O Unit	Resolution: 1/4000, Conversion speed: 1 ms/point max. (Settable to 1/8000, 250 μs/point)	CJ I VV-IVIAD42(SL)	UC1, CE, N, L
Process Input Units	2 isolated DC inputs, 16-bit resolution, conversion speed 10 ms/2 pts	CJ1W-PDC15	UC1, CE
·	2 isolated thermocouple inputs, 16-bit resolution, conversion speed 10 ms/2pts	CJ1W-PTS15	1
	2 isolated Pt100 inputs, 16-bit resolution, conversion speed 10 ms/2pts	CJ1W-PTS16	1
	4 isolated inputs, thermocouple type R, S, K, J, T, L, B. Conversion speed 250 ms/4 pts	CJ1W-PTS51	1
	4 isolated Pt100 inputs (JIS, IEC). Conversion speed 250 ms/4 pts	CJ1W-PTS52]
Temperature	4 loops, thermocouple input, NPN output	CJ1W-TC001	UC1, CE, N, L
Control Units	4 loops, thermocouple input, PNP output	CJ1W-TC002	1
	2 loops, thermocouple input, NPN output, heater burnout detection function	CJ1W-TC003	
	2 loops, thermocouple input, PNP output, heater burnout detection function	CJ1W-TC004	1
	4 loops, platinum resistance thermometer input, NPN output	CJ1W-TC101	
	4 loops, platinum resistance thermometer input, PNP output	CJ1W-TC102	
	2 loops, platinum resistance thermometer input, NPN output, heater burnout detection function	CJ1W-TC103	
	2 loops, platinum resistance thermometer input, PNP output, heater burnout detection function	CJ1W-TC104	
High-speed Counter Unit	2 inputs, max. input frequency: 500 kpps	CJ1W-CT021	UC1, CE, N, L
4-Channel Counter Unit	4 inputs, max. input frequency: 100 kpps	CJ1W-CTL41-E	UC1, CE, L
	Screwless Terminal Block for CJ1W-CTL41-E	XW2G-40G7-E	CE
2-SSI Encoder Input Unit	2 Synchronous Serial Interface channels	CJ1W-CTS21-E	CE, L
	nit Exchanges up to 180 words in any memory area with a PROFIBUS-DP Master Unit	CJ1W-PRT21	UC1, CE
CompoBus/S Master Unit	CompoBus/S remote I/O, 256 points max.	CJ1W-SRM21	UC1, CE, N, L
Position Control Units	Pulse train, open collector output, 1 axis	CJ1W-NC113	UC1, CE
	Pulse train, open collector output, 2 axes	CJ1W-NC213	
	Pulse train, open collector output, 4 axes (See note 1.)	CJ1W-NC413	
	Pulse train, line driver output, 1 axis	CJ1W-NC133	
	Pulse train, line driver output, 2 axes	CJ1W-NC233	
	Pulse train, line driver output, 4 axes (See note 1.)	CJ1W-NC433	
	Spacer Unit (See note 1.)	CJ1W-SP001	
Servo Relay Units (See note 2.)	For 1-Axis Position Control Unit (without communications support) (CS1W-NC113/133, CJ1W-CN113/133, C200HW-NC113, C200H-NC112)	XW2B-20J6-1B	
	For 2- or 4-Axis Position Control Unit (without communications support)	XW2B-40J6-2B	
	(CS1W-NC213/233/413/433, CJ1W-CN213/233/413/433, C200HW-NC213/413, C500-NC213/		
	211, C200H-NC211) For 2- or 4-Axis Position Control Unit (with communications support)	VIMOR 40 IC 4A	
	(CS1W-NC213/233/413/433, CJ1W-CN213/233/413/433, C200HW-NC213/413)	XW2B-40J6-4A	
Position Control Unit Cable		XW2Z-050J-A14	
(See note 2.)	Connects CJ1W-NC113 to W Series, Cable length: 1 m	XW2Z-100J-A14	
	Connects CJ1W-NC213/413 to W Series, Cable length: 0.5 m	XW2Z-050J-A15	
	Connects CJ1W-NC213/413 to W Series, Cable length: 1 m	XW2Z-100J-A15	1
	Connects CJ1W-NC113 to SmartStep, Cable length: 0.5 m	XW2Z-050J-A16	1
	Connects CJ1W-NC113 to SmartStep, Cable length: 1 m	XW2Z-100J-A16	1
	Connects CJ1W-NC213/413 to SmartStep, Cable length: 0.5 m	XW2Z-050J-A17	1
	Connects CJ1W-NC213/413 to SmartStep, Cable length: 1 m	XW2Z-100J-A17	1
	Connects CJ1W-NC133 to W Series, Cable length: 0.5 m	XW2Z-050J-A18	1
	Connects CJ1W-NC133 to W Series, Cable length: 1 m	XW2Z-100J-A18]
	Connects CJ1W-NC233/433 to W Series, Cable length: 0.5 m	XW2Z-050J-A19	1
	Connects CJ1W-NC233/433 to W Series, Cable length: 1 m	XW2Z-100J-A19	1
		XW2Z-050J-A20]
	Connects CJ1W-NC133 to SmartStep, Cable length: 0.5 m	XVV22 0300 A20	
	Connects CJ1W-NC133 to SmartStep, Cable length: 0.5 m Connects CJ1W-NC133 to SmartStep, Cable length: 1 m	XW2Z-100J-A20]
	Connects CJ1W-NC133 to SmartStep, Cable length: 1 m Connects CJ1W-NC233/433 to SmartStep, Cable length: 0.5 m		
	Connects CJ1W-NC133 to SmartStep, Cable length: 1 m	XW2Z-100J-A20	
ID Sensor Unit (See note 3.)	Connects CJ1W-NC133 to SmartStep, Cable length: 1 m Connects CJ1W-NC233/433 to SmartStep, Cable length: 0.5 m	XW2Z-100J-A20 XW2Z-050J-A21	

^{1.} The ambient operating temperature for 4-Axis Position Control Units is 0 to 50 °C; mount a Spacer Unit to the Position Control Unit in case the ambient temperature may reach 55 °C. The allowable voltage fluctuation on the external 24- V DC power supply is 22.8 to 25.2 V DC (24 V ±5%).

^{2.} Two Servo Relay Units and two cables for the Position Control Unit are required for a 4-Axis Position Control Unit.

^{3.} Refer to the Auto-Identification Components Group Catalog (Cat. No. Q132) for details on the V600 Series RFID System

CPU Bus Units

Name	Specifications	Model	Standards	
Controller Link Units	Wired	CJ1W-CLK21-V1	UC, CE, N, L	
	(Shielded twisted-pair cable)			
Controller Link	Wired	CJ1W-TB101		
Relay Terminal	Set of 5 Terminals			
Controller Link Support Board	Twisted pair, PCI bus, with Support Software	3G8F7-CLK21-EV1	CE	
Controller Link	Twisted-pair cable	CS1W-RPT01	UC1, CE	
Repeater Units	Optical Ring (H-PCF cable)	CS1W-RPT02		
	Optical Ring (GI cable)	CS1W-RPT03		
Serial Communica-	1 RS-232C port and 1 RS-422/485 port	CJ1W-SCU41-V1	UC, CE, N, L	
tions Units	2 RS-232C ports	CJ1W-SCU21-V1		
Ethernet Unit	100Base-Tx	CJ1W-ETN21	UC, CE, N, L	
DeviceNet Unit	Functions as master and/or slave; allows control of 32,000 points max. per master	CJ1W-DRM21		
CAN Unit	Freely configurable reception and transmission of CAN messages	CJ1W-CORT21	UC1, CE	
PROFIBUS-DP	Controls up to 7000 words of remote I/O data over PROFIBUS-DP	CJ1W-PRM21	UC, CE	
Master Unit				
CX-PROFIBUS, PROFIBUS-DP Configurator	Software only (Windows 2000, XP)	CX-Profi-V1		
Motion Control Unit	Real axes: 30, Virual Axes: 2, Communication by Mechatrolink-II	CJ1W-MCH71	CE	
Position Control Unit	Mechatrolink-II connection to max. 16 axes	CJ1W-NCF71	UC1. CE	

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

Cat. No. P04E-EN-03A

In the interest of product improvement, specifications are subject to change without notice.

ПОСТАВКА ЭЛЕКТРОННЫХ КОМПОНЕНТОВ

многоканальный

Общество с ограниченной ответственностью «МосЧип» ИНН 7719860671 / КПП 771901001 Адрес: 105318, г.Москва, ул.Щербаковская д.3, офис 1107

Данный компонент на территории Российской Федерации Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:
