

## SY88147DL

### 3.3V, 1.25Gbps PECL Limiting Post Amplifier w/High Gain TTL Loss-of-Signal

#### General Description

The SY88147DL is a high-sensitivity limiting post amplifier designed for use in fiber-optic receivers. These devices connect to typical transimpedance amplifiers (TIAs). The linear signal output from TIAs can contain significant amounts of noise and may vary in amplitude over time. The SY88147DL quantizes these signals and outputs PECL level waveforms.

The SY88147DL operates from a single +3.3V power supply, over temperatures ranging from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . With its wide bandwidth and high gain, signals with data rates up to 1.25Gbps, and as small as  $5\text{mV}_{\text{PP}}$ , can be amplified to drive devices with PECL inputs.

The SY88147DL generates a high-gain loss-of-signal (LOS) open-collector TTL output. The LOS function has a high gain input stage for increased sensitivity. A programmable Loss-of-Signal level set pin ( $\text{LOS}_{\text{LVL}}$ ) sets the sensitivity of the input amplitude detection. LOS asserts high if the input amplitude falls below the threshold set by  $\text{LOS}_{\text{LVL}}$  and de-asserts low otherwise. The enable bar input ( $/\text{EN}$ ) de-asserts the true output signal without removing the input signal. The LOS output can be fed back to the  $/\text{EN}$  input to maintain output stability under a loss-of-signal condition. Typically 3.5dB LOS hysteresis is provided to prevent chattering.

All support documentation can be found on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

#### Features

- Single 3.3V power supply
- DC to 1.25Gbps operation
- Low-noise PECL data outputs
- High-gain LOS
- Chatter-free Open-Collector TTL Loss of Signal (LOS) output with internal  $4.75\text{k}\Omega$  pull-up resistor
- TTL  $/\text{EN}$  input
- Programmable LOS level set ( $\text{LOS}_{\text{LVL}}$ )
- Available in a tiny 10-pin MSOP

#### Applications

- APON/BPON/EPON/GEPON/GPON
- Gigabit Ethernet
- 531Mbps and 1062Mbps Fibre Channel
- OC-3 and OC-12/24 SONET/SDH
- High-gain line driver and line receiver
- Low-gain TIA interface

#### Markets

- FTTH
- Datacom/Telecom
- Optical transceiver

### Typical Application Circuit

## Ordering Information

Part Number	Package Type	Operating Range	Package Marking	Lead Finish
SY88147DLKG	K10-1	Industrial	147D with Pb-Free bar line indicator	NiPdAu Pb-Free
SY88147DLKGTR <sup>(1)</sup>	K10-1	Industrial	147D with Pb-Free bar line indicator	NiPdAu Pb-Free

**Note:**

1. Tape and Reel.

## Pin Configuration

**10-Pin MSOP (K10-1)**

## Pin Description

Pin Number	Pin Name	Type	Pin Function
1	/EN	TTL Input: Default is HIGH.	/Enable: This input enables the outputs when it is LOW. Note that this input is internally connected to a 25k $\Omega$ pull-up resistor and will default to a logic HIGH state if left open.
2	DIN	Data Input	True data input.
3	/DIN	Data Input	Complementary data input.
4	VREF		Reference voltage: Placing a capacitor here to $V_{CC}$ helps stabilize $LOS_{LVL}$ .
5	LOSLVL	Input	Loss-of-Signal Level Set: a resistor from this pin to $V_{CC}$ sets the threshold for the data input amplitude at which LOS will be asserted.
6	GND, Exposed Pad	Ground	Device ground.
7	LOS	Open-collector TTL output w/internal 4.75k $\Omega$ pull-up resistor	Loss-of-Signal: asserts high when the data input amplitude falls below the threshold sets by $LOS_{LVL}$ .
8	/DOUT	PECL Output	Complementary data output.
9	DOUT	PECL Output	True data output.
10	VCC	Power Supply	Positive power supply.

### Absolute Maximum Ratings<sup>(1)</sup>

Supply Voltage ( $V_{CC}$ ) ..... 0V to +4.0V  
 Input Voltage (DIN, /DIN) ..... 0 to  $V_{CC}$   
 Output Current ( $I_{OUT}$ )  
     Continuous .....  $\pm 50\text{mA}$   
     Surge .....  $\pm 100\text{mA}$   
 /EN Voltage ..... 0 to  $V_{CC}$   
 $V_{REF}$  Current .....  $-800\mu\text{A}$  to  $+500\mu\text{A}$   
 $LOS_{LVL}$  Voltage .....  $V_{REF}$  to  $V_{CC}$   
 Lead Temperature (soldering, 20sec.) .....  $+260^\circ\text{C}$   
 Storage Temperature ( $T_s$ ) .....  $-65^\circ\text{C}$  to  $+150^\circ\text{C}$

### Operating Ratings<sup>(2)</sup>

Supply Voltage ( $V_{CC}$ ) ..... +3.0V to +3.6V  
 Ambient Temperature ( $T_A$ ) .....  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$   
 Junction Temperature ( $T_J$ ) .....  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$   
 Junction Thermal Resistance  
 MSOP  
     ( $\theta_{JA}$ ) Still-air .....  $113^\circ\text{C/W}$

### DC Electrical Characteristics

$V_{CC} = 3.0$  to  $3.6\text{V}$ ;  $R_L = 50\Omega$  to  $V_{CC}-2\text{V}$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 3.3\text{V}$ ,  $T_A = 25^\circ\text{C}$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$I_{CC}$	Power Supply Current	No output load		26	39	mA
$LOS_{LVL}$	$LOS_{LVL}$ Voltage		$V_{REF}$		$V_{CC}$	V
$V_{OH}$	PECL Output HIGH Voltage		$V_{CC}-1.085$	$V_{CC}-0.955$	$V_{CC}-0.880$	V
$V_{OL}$	PECL Output LOW Voltage		$V_{CC}-1.850$	$V_{CC}-1.705$	$V_{CC}-1.555$	V
$V_{IHCMR}$	Common Mode Range		GND+2.0		$V_{CC}$	V
$V_{REF}$	Reference Voltage		$V_{CC}-1.48$	$V_{CC}-1.32$	$V_{CC}-1.16$	V

### TTL DC Electrical Characteristics

$V_{CC} = 3.0$  to  $3.6\text{V}$ ;  $R_L = 50\Omega$  to  $V_{CC}-2\text{V}$ ;  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values at  $V_{CC} = 3.3\text{V}$ ,  $T_A = 25^\circ\text{C}$ .

Symbol	Parameter	Condition	Min	Typ	Max	Units
$V_{IH}$	/EN Input HIGH Voltage		2.0			V
$V_{IL}$	/EN Input LOW Voltage				0.8	V
$I_{IH}$	/EN Input HIGH Current	$V_{IN} = 2.7\text{V}$ $V_{IN} = V_{CC}$			20 100	$\mu\text{A}$ $\mu\text{A}$
$I_{IL}$	/EN Input LOW Current	$V_{IN} = 0.5\text{V}$	-0.3			mA
$V_{OH}$	LOS Output HIGH Level	$V_{CC} \geq 3.3\text{V}$ , $I_{OH-MAX} < 160\mu\text{A}$ $V_{CC} < 3.3\text{V}$ , $I_{OH-MAX} < 160\mu\text{A}$	2.4 2.0			V V
$V_{OL}$	LOS Output LOW Level	$I_{OL} = +2\text{mA}$			0.5	V

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Thermal performance assumes the use of a 4-layer PCB. Exposed pad must be soldered (or equivalent) to the device's most negative potential on the PCB.

## AC Electrical Characteristics

$V_{CC} = 3.0V$  to  $3.6V$ ;  $R_{LOAD} = 50\Omega$  to  $V_{CC} - 2V$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ .

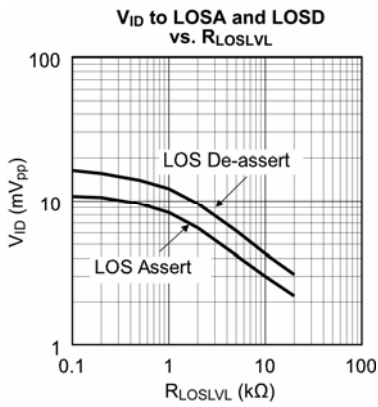

Symbol	Parameter	Condition	Min	Typ	Max	Units

$A_{V(Diff)}$	Differential Voltage Gain			42		dB
$S_{21}$	Single-ended Small-Signal Gain		30	36		dB

### Notes:

- Amplifier in limiting mode. Input is a 200MHz square wave.
- Deterministic jitter measured using 1.25Gbps K28.5 pattern,  $V_{ID} = 10mV_{PP}$ .
- Random jitter measured using 1.25Gbps K28.7 pattern,  $V_{ID} = 10mV_{PP}$ .
- This specification defines electrical hysteresis as  $20\log(\text{LOS De-assert}/\text{LOS Assert})$ . The ratio between optical hysteresis and electrical hysteresis is found to vary between 1.5 and 2 depending on the level of received optical power and ROSA characteristics. Based on that ratio, the optical hysteresis corresponding to the electrical hysteresis range 2dB-4.5dB, shown in the AC characteristics table, will be 1dB-3dB.
- See "Typical Operating Characteristics" for a graph showing how to choose a particular  $R_{LOSLVL}$  for a particular LOS assert and its associated de-assert amplitude.

### Typical Operating Characteristics

$V_{CC} = 3.3V$ ,  $T_A = 25^\circ C$ ,  $R_L = 50\Omega$  to  $V_{CC}-2V$ , unless otherwise stated.

## Functional Block Diagram

### Detailed Description

The SY88147DL high-sensitivity limiting post amplifier operates from a single +3.3V power supply, over temperatures from  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ . Signals with data rates up to 1.25Gbps and as small as  $5\text{mV}_{\text{PP}}$  can be amplified. Figure 1 shows the allowed input voltage swing. The SY88147DL generates a LOS output, allowing feedback to /EN for output stability.  $\text{LOS}_{\text{LVL}}$  sets the sensitivity of the input amplitude detection.

#### Input Amplifier/Buffer

Figure 2 shows a simplified schematic of the input stage. The high-sensitivity of the input amplifier allows signals as small as  $5\text{mV}_{\text{PP}}$  to be detected and amplified. The input amplifier allows input signals as large as  $1800\text{mV}_{\text{PP}}$ . Input signals are linearly amplified with a typically 42dB differential voltage gain. Since it is a limiting amplifier, the SY88147DL outputs typically  $1500\text{mV}_{\text{PP}}$  voltage-limited waveforms for input signals that are greater than  $12\text{mV}_{\text{PP}}$ . Applications requiring the SY88147DL to operate with high-gain should have the upstream TIA placed as close as possible to the SY88147DL's input pins to ensure the best performance of the device.

#### Output Buffer

The SY88147DL's PECL output buffer is designed to drive  $50\Omega$  lines. The output buffer requires appropriate termination for proper operation. An external  $50\Omega$  resistor to  $V_{\text{CC}}-2\text{V}$  for each output pin provides this. Figure 3 shows a simplified schematic of the output stage.

#### Loss-of-Signal

The SY88147DL generates a chatter-free loss-of-signal (LOS) open-collector TTL output with internal  $4.75\text{k}\Omega$  pull-up resistor as shown in Figure 4. LOS is used to determine that the input amplitude is too small to be considered a valid input. LOS asserts high if the input amplitude falls below the threshold sets by  $\text{LOSLVL}$  and de-asserts low otherwise. LOS can be fed back to the enable (/EN) input to maintain output stability under a loss of signal condition. /EN de-asserts low the true output signal without removing the input signals. Typically, 3.5dB LOS hysteresis is provided to prevent chattering.

#### Loss-of-Signal-Level Set

A programmable LOS level set pin ( $\text{LOS}_{\text{LVL}}$ ) sets the threshold of the input amplitude detection. Connecting an external resistor between  $V_{\text{CC}}$  and  $\text{LOS}_{\text{LVL}}$  sets the voltage at  $\text{LOS}_{\text{LVL}}$ . This voltage ranges from  $V_{\text{CC}}$  to  $V_{\text{REF}}$ . The external resistor creates a voltage divider between  $V_{\text{CC}}$  and  $V_{\text{REF}}$  as shown in Figure 5.

#### Hysteresis

The SY88147DL typically provides 3.5dB LOS electrical hysteresis. By definition, a power ratio measured in dB is  $10\log(\text{power ratio})$ . Power is calculated as  $V_{\text{IN}}^2/R$  for an electrical signal. Hence, the same ratio can be stated as  $20\log(\text{voltage ratio})$ . While in linear mode, the electrical voltage input changes linearly with the optical power and hence the ratios change linearly. Therefore, the optical hysteresis in dB is half the electrical hysteresis in dB given in the data sheet. The SY88147DL is an electrical device; this data sheet refers to hysteresis in electrical terms. With 3.5dB LOS hysteresis, a voltage factor of 1.5 is required to assert or de-assert LOS.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
