Fixed Frequency Current Mode PWM Controller

IL3842

DESCRIPTION

Fixed frequency current-mode PWM controller. It is specially designed for Off Line And DC-to-DC converter applications with minimal external component. This integrated circuit features a trimmed oscillator for precise duty cycle control. a temperature compensated reference, high gain arror amplifier, current sensing comparator, and a high current totempole output ideally suited for driving a power MOSFET.

Protection circuitry includes built in under-voltage lockout and current limiting.

ORDERING INFORMATION

IL3842N Plastic
IL3842D SOIC
T_A = 0° to + 70° C for all packages.

FEATURES

- ♦ Automatic Feed Forward Compensation
- ♦High Gain Totem Pole Output
- ♦Internally Trimmed Bandgap Reference
- ♦Undervoltage Lockout with Hysteresis
- ♦Low Start Up Current
- ♦Optimized for offline converter
- ♦Double pulse suppression
- ♦Current mode operation to 500KHz

PIN FUNCTION DESCRIPTION

Pin No.	Function	Description
1	Compensation	This pln is the Error Amplifier output and is made available for loop compensation
2	Voltage Feedback	This is the inverting input of the Error Amplifier. It is normally connected to the switching power supply outpul through a resistor divider.
3	Current Sense	A voltage proportional to inductor current is connected to this input. The PWM uses this. information to terminate the output switch conduction
4	RT/CT	The Oscillator frequency and maximum Output duty cycle are programmed by connecting resistor R_T to V_{REF} and capacitor C_T to ground. Operation to 500kHz is possible.
5	GND	This pin is the combined conlrol circuitry and power ground
6	Output	This output directly drives the gate of a power MOSFET. Peak currents up to 1,0A are sourced and sunk by this pin.
7	Vcc	This pin is the positive supply of the control IC.
8	V_{REF}	This is the reference output. It provides chsarging current for capacitor C_T through resistor R_T

ABSOLUTE MAXIMUM RATINGS

* Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied.
Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
