

ACPL-K43T, ACPL-K44T

Automotive R²Coupler™ Wide Operating Temperature 1MBd Digital Optocoupler in a Stretched 8-Pin Surface Mount Plastic Package

Data Sheet

Description

The ACPL-K43T is a single channel, high temperature, high CMR, high speed digital optocoupler in an eight lead miniature footprint specifically used in the automotive applications. The ACPL-K44T is a dual channel equivalent of the ACPL-K43T. Both products are available in the stretched SO-8 package outline, designed to be compatible with standard surface mount processes.

This digital optocoupler uses an insulating layer between the light emitting diode and an integrated photo detector to provide electrical insulation between input and output. Separate connections for the photodiode bias and output transistor collector increase the speed up to a hundred times over that of a conventional photo-transistor coupler by reducing the base-collector capacitance.

Avago R²Coupler isolation products provide with reinforced insulation and reliability that delivers safe signal isolation critical in automotive and high temperature industrial applications.

Functional Diagram

Truth Table

LED	V ₀
ON	LOW
OFF	HIGH

Note: The connection of a 0.1 μ F bypass capacitor between pins 5 and 8 is recommended.

Features

- High Temperature and Reliability low speed digital interface for Automotive Application
- Ultra low drive for status feedback at $I_F = 0.8$ mA or 1.5 mA
- 30 kV/ μ s (Typ) High Common-Mode Rejection at $V_{CM} = 1500$ V
- Compact, Auto-Insertable Stretched SO8 Packages
- Qualified to AEC Q100 Grade 1 Test Guidelines
- Wide Operating Temperature Range: -40° C to +125° C
- High Speed: 1 MBd
- Low Propagation Delay: 1 μ s max. at $I_F = 10$ mA
- Worldwide Safety Approval:
 - UL 1577 approval, 5 kV_{RMS}/1 min.
 - CSA Approval
 - IEC/EN/DIN EN 60747-5-5

Applications

- Automotive IPM Driver for DC-DC converters and motor inverters
- Status Feedback and Wake-Up Signal Isolation
- CANBus and SPI Communications Interface
- High Temperature Digital/Analog Signal Isolation

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Ordering Information

Specify part number followed by option number (if desired).

Part number	Option (RoHS Compliant)	Package	Surface Mount	Tape & Reel	UL 5000 V_{rms} / 1 Minute rating	IEC/EN/DIN EN 60747-5-5	Quantity
ACPL-K43T	-000E	Stretched SO-8	X		X		80 per tube
	-060E		X		X	X	80 per tube
	-500E		X	X	X		1000 per reel
	-560E		X	X	X	X	1000 per reel
ACPL-K44T	-000E	Stretched SO-8	X		X		80 per tube
	-060E		X		X	X	80 per tube
	-500E		X	X	X		1000 per reel
	-560E		X	X	X	X	1000 per reel

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

ACPL-K43T-560E to order product of SSO-8 Surface Mount package in Tape and Reel packaging with IEC/EN/DIN EN 60747-5-5 Safety Approval in RoHS compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

Schematic

Package Outline Dimensions (Stretched S08)

Dimensions in millimeters and (inches).

Note:

Lead coplanarity = 0.1 mm (0.004 inches).

Floating lead protrusion = 0.25mm (10mils) max.

Recommended Pb-Free IR Profile

Recommended reflow condition as per JEDEC Standard, J-STD-020 (latest revision).

Note: Non-halide flux should be used.

Regulatory Information

The ACPL-K43T and ACPL-K44T are approved by the following organizations:

UL

UL 1577, component recognition program up to $V_{ISO} = 5 \text{ kV}_{RMS}$.

CSA

CSA Component Acceptance Notice #5.

IEC/EN/DIN EN 60747-5-5

IEC 60747-5-5

EN 60747-5-5

DIN EN 60747-5-5

Insulation and Safety Related Specifications

Parameter	Symbol	ACPL-K43T ACPL-K44T	Units	Conditions
Minimum External Air Gap (Clearance)	L(101)	8	mm	Measured from input terminals to output terminals, shortest distance through air.
Minimum External Tracking (Creepage)	L(102)	8	mm	Measured from input terminals to output terminals, shortest distance path along body.
Minimum Internal Plastic Gap (Internal Clearance)		0.08	mm	Through insulation distance conductor to conductor, usually the straight line distance thickness between the emitter and detector.

Package Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions	Fig.	Note
Input-Output Momentary Withstand Voltage*	V_{ISO}	5000			V_{RMS}	$RH \leq 50\%$, $t = 1\text{ min.}$, $T_A = 25^\circ\text{C}$		7, 8
Input-Output Resistance	R_{I-O}		10^{14}		Ω	$V_{I-O} = 500\text{ Vdc}$		7
Input-Output Capacitance	C_{I-O}		0.6		pF	$f = 1\text{ MHz}$, $V_{I-O} = 0\text{ Vdc}$		7

* The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating.

Notes:

1. Current Transfer Ratio in percent is defined as the ratio of output collector current, I_O , to the forward LED input current, I_F , times 100.
2. Use of a $0.1\text{ }\mu\text{F}$ bypass capacitor connected between pins 5 and 8 is recommended.
3. The $1.9\text{ k}\Omega$ load represents 1 TTL unit load of 1.6 mA and the $5.6\text{ k}\Omega$ pull-up resistor.
4. Pulse Width Distortion (PWD) is defined as $|t_{PHL} - t_{PLH}|$ for any given device.
5. The difference between t_{PLH} and t_{PHL} between any two parts under the same test condition.
6. Common transient immunity in a Logic High level is the maximum tolerable (positive) dV_{CM}/dt on the rising edge of the common mode pulse, V_{CM} , to assure that the output will remain in a Logic High state (i.e., $V_O > 2.0\text{ V}$). Common mode transient immunity in a Logic Low level is the maximum tolerable (negative) dV_{CM}/dt on the falling edge of the common mode pulse signal, V_{CM} to assure that the output will remain in a Logic Low state (i.e., $V_O < 0.8\text{ V}$).
7. Device considered a two terminal device: pins 1, 2, 3 and 4 shorted together, and pins 5, 6, 7 and 8 shorted together.
8. In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage $\geq 6000\text{ V}_{RMS}$ for 1 second.

Thermal Resistance Model for ACPL-K43T

The diagram of ACPL-K43T for measurement is shown in Figure 15. Here, one die is heated first and the temperatures of all the dice are recorded after thermal equilibrium is reached. Then, the 2nd die is heated and all the dice temperatures are recorded. With the known ambient temperature, the die junction temperature and power dissipation, the thermal resistance can be calculated. The thermal resistance calculation can be cast in matrix form. This yields a 2 by 2 matrix for our case of two heat sources.

$$\begin{bmatrix} R_{11} & R_{12} \\ R_{21} & R_{22} \end{bmatrix} \times \begin{bmatrix} P_1 \\ P_2 \end{bmatrix} = \begin{bmatrix} \Delta T_1 \\ \Delta T_2 \end{bmatrix}$$

R_{11} : Thermal Resistance of Die1 due to heating of Die1 (°C/W)

R_{12} : Thermal Resistance of Die1 due to heating of Die2 (°C/W)

R_{21} : Thermal Resistance of Die2 due to heating of Die1 (°C/W)

R_{22} : Thermal Resistance of Die2 due to heating of Die2 (°C/W)

P_1 : Power dissipation of Die1 (W)

P_2 : Power dissipation of Die2 (W)

T_1 : Junction temperature of Die1 due to heat from all dice (°C)

T_2 : Junction temperature of Die2 due to heat from all dice (°C)

T_a : Ambient temperature (°C)

ΔT_1 : Temperature difference between Die1 junction and ambient (°C)

ΔT_2 : Temperature difference between Die2 junction and ambient (°C)

$$T_1 = (R_{11} \times P_1 + R_{12} \times P_2) + T_a$$

$$T_2 = (R_{21} \times P_1 + R_{22} \times P_2) + T_a$$

Measurement data on a low K board:

$$R_{11} = 160 \text{ °C/W}, R_{12} = R_{21} = 74 \text{ °C/W}, R_{22} = 115 \text{ °C/W}$$

Figure 15. Diagram of ACPL-K43T for measurement

Thermal Resistance Model for ACPL-K44T

The diagram of ACPL-K44T for measurement is shown in Figure 16. Here, one die is heated first and the temperatures of all the dice are recorded after thermal equilibrium is reached. Then, the 2nd, 3rd and 4th die is heated and all the dice temperatures are recorded. With the known ambient temperature, the die junction temperature and power dissipation, the thermal resistance can be calculated. The thermal resistance calculation can be cast in matrix form. This yields a 4 by 4 matrix for our case of two heat sources.

$$\begin{bmatrix} R_{11} & R_{12} & R_{13} & R_{14} \\ R_{21} & R_{22} & R_{23} & R_{24} \\ R_{31} & R_{32} & R_{33} & R_{34} \\ R_{41} & R_{42} & R_{43} & R_{44} \end{bmatrix} \times \begin{bmatrix} P_1 \\ P_2 \\ P_3 \\ P_4 \end{bmatrix} = \begin{bmatrix} \Delta T_1 \\ \Delta T_2 \\ \Delta T_3 \\ \Delta T_4 \end{bmatrix}$$

R_{11} : Thermal Resistance of Die1 due to heating of Die1 (°C/W)

R_{12} : Thermal Resistance of Die1 due to heating of Die2 (°C/W)

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
