

PIC32 GUI Development Board with Projected Capacitive (PCAP) Touch Information Sheet

Thank you for purchasing a PIC32 GUI Development Board with Projected Capacitive (PCAP) Touch, also referred to as the *PCAP Board*. This information sheet provides some important details that will help you successfully use the board as quickly as possible.

Additional information can be accessed at: <http://www.microchip.com>

Basic Requirements

The PCAP Board is a stand-alone solution that does not require a starter kit or a plug-in module (PIM) to run. The board uses a PIC32MX795F512L microcontroller to control the LCD using Low-Cost Controllerless (LCC) graphics. A capacitive sensing MTCH6301 microcontroller is also on the board to handle the PCAP sensing. The board uses a separate sensor for PCAP that is attached to the LCD.

As an alternate PCAP sensing method, an additional header (J6) on the board enables the use of an LCD with built-in PCAP sensing. It is assumed that an I²C interface will be used for communications. In this case, a driver would need to be added to the software to support this change.

For more information about LCC Graphics visit: <http://www.microchip.com/LCC>

Getting Started

To get started with the PCAP Board, follow these steps:

1. Ensure that MPLAB[®] IDE is installed.
2. Download a project file for the PCAP board from the Microchip website.
3. Power the PCAP board using a USB cable.
4. Connect a debugger/programmer using the PICKit[™] header, J2.
5. Using MPLAB IDE, open the project that was previously downloaded.
6. Select a debugger/programmer in MPLAB IDE.
7. Click **Build**. This builds the downloaded project.
8. Click **Program all memories**.
9. Click **Run**.

Your PCAP Board should now be up and running. On the main screen, which will have a white background, there are icons of demonstrations to choose. These demonstrations showcase some of the features of LCC and the multi-touch features of PCAP.

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:

105318, г.Москва, ул.Щербаковская д.3, офис 1107, 1118, ДЦ «Щербаковский»
