

## Low-Cost, Low-Voltage, Quad, SPST, CMOS Analog Switches

### General Description

The MAX4066/MAX4066A quad, SPST, CMOS analog switches are designed to provide superior performance over the industry-standard devices. These new switches feature guaranteed operation from +2.0V to +16V and are fully specified at 3V, 5V, and 12V. Both parts offer 45Ω on-resistance and 2Ω channel-to-channel matching at 12V, plus 4Ω flatness over the specified signal range.

Each device is controlled by TTL/CMOS input levels and can be used as a bilateral switch or multiplexer/demultiplexer.

Low off leakage current (100pA for the MAX4066A) and low power consumption (0.5μW) make the MAX4066/MAX4066A ideal for battery-operated equipment. These parts are also suitable for low-distortion audio applications. Both devices are available in 14-pin DIP and SO packages, as well as a 16-pin QSOP. ESD protection is greater than 2000V per Method 3015.7.

### Applications

Battery-Operated Equipment  
Audio and Video Signal Routing  
Low-Voltage Data-Acquisition Systems  
Sample-and-Hold Circuits  
Communication Circuits

### Features

- ♦ Pin Compatible with 74HC4066
- ♦ Guaranteed On-Resistance:  
170Ω max (3V supply)  
45Ω max (12V supply)
- ♦ Guaranteed Match Between Channels:  
4Ω max (MAX4066)  
2Ω max (MAX4066A)
- ♦ Guaranteed Low Leakage Currents:  
1nA at +25°C (MAX4066)  
100pA at +25°C (MAX4066A)
- ♦ Single-Supply Operation from +2.0V to +16V
- ♦ V+ to GND Signal Handling
- ♦ TTL/CMOS-Logic Compatible
- ♦ Low Power Consumption: 0.5μW
- ♦ Low Crosstalk: -86dB
- ♦ Low Off Isolation: -58dB
- ♦ Low Distortion: 0.03%
- ♦ Wide Bandwidth: > 100MHz

MAX4066/MAX4066A

### Ordering Information

| PART       | TEMP. RANGE  | PIN-PACKAGE    |
|------------|--------------|----------------|
| MAX4066CPD | 0°C to +70°C | 14 Plastic DIP |
| MAX4066CSD | 0°C to +70°C | 14 Narrow SO   |
| MAX4066CEE | 0°C to +70°C | 16 QSOP        |
| MAX4066C/D | 0°C to +70°C | Dice*          |

Ordering Information continued at end of data sheet.

**Note 1:** Signals on NO<sub>-</sub>, COM<sub>-</sub>, or IN<sub>-</sub> exceeding V+ or GND are clamped by internal diodes. Limit forward-diode current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Note 2:** The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

**Note 3:** Guaranteed by design.

**Note 4:**  $\Delta R_{ON} = R_{ON}(\text{max}) - R_{ON}(\text{min})$ .

**Note 5:** Flatness is defined as the difference between the maximum and minimum value of on-resistance as measured over the specified analog signal range.

**Note 6:** Leakage parameters are 100% tested at maximum-rated hot temperature and guaranteed by correlation at +25°C.

**Note 7:** Off Isolation =  $20\log_{10}(V_{COM} / V_{NO})$ , V<sub>COM</sub> = output, V<sub>NO</sub> = input to off switch.

**Note 8:** Between any two switches.

MAX4066/MAX4066A

## Applications Information

### Overvoltage Protection

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, followed by the logic inputs. If power-supply sequencing is not possible, add two small signal diodes in series with supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to 1V below V+ and 1V above GND, but low switch resistance and low leakage characteristics are unaffected. Device operation is unchanged, and the difference between V+ and GND should not exceed 17V.

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
