

## Double channel high side driver for automotive applications

### Features

Max supply voltage	$V_{CC}$	41V
Operating voltage range	$V_{CC}$	4.5 to 36V
Max on-state resistance	$R_{ON}$	160 m $\Omega$
Current limitation (typ)	$I_{LIMH}$	5A
Off state supply current (typ)	$I_S$	2 $\mu A^{(1)}$

1. Typical value with all loads connected.

- General
  - Inrush current active management by power limitation
  - Very low stand-by current
  - 3.0V CMOS compatible input
  - Optimized electromagnetic emission
  - Very low electromagnetic susceptibility
  - In compliance with the 2002/95/EC European directive
- Diagnostic functions
  - Open drain status output
  - On state open load detection
  - Off state open load detection
  - Thermal shutdown indication
- Protection
  - Undervoltage shut-down
  - Overvoltage clamp
  - Output stuck to  $V_{CC}$  detection
  - Load current limitation
  - Self limiting of fast thermal transients
  - Protection against loss of ground and loss of  $V_{CC}$
  - Thermal shut down
  - Reverse battery protection (see [Figure 28](#))

- Electrostatic discharge protection

### Application

- All types of resistive, inductive and capacitive loads

### Description

The VND5160J-E is a monolithic device made using STMicroelectronics VIPower M0-5 technology. It is intended for driving resistive or inductive loads with one side connected to ground. Active  $V_{CC}$  pin voltage clamp protects the device against low energy spikes (see ISO7637 transient compatibility table).

The device detects open load condition in both ON and OFF states, when STAT\_DIS is left open or driven low. Output shorted to  $V_{CC}$  is detected in the OFF state.

When STAT\_DIS is driven high, the STATUS pin is in a high impedance condition.

Output current limitation protects the device in overload condition. In case of long duration overload, the device limits the dissipated power to safe level up to thermal shut-down intervention. Thermal shut-down with automatic restart allows the device to recover normal operation as soon as fault condition disappears.

### 2.1 Absolute maximum ratings

Stressing the device above the ratings listed in the “Absolute maximum ratings” tables may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to the conditions in this section for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

### 3 Application information

Figure 28. Application schematic

Note: Channels 2, has the same internal circuit as channel 1.

### 3.1 GND protection network against reverse battery

#### 3.1.1 Solution 1 : resistor in the ground line (R<sub>GND</sub> only)

This can be used with any type of load.

The following is an indication on how to dimension the R<sub>GND</sub> resistor.

1.  $R_{GND} \leq 600\text{mV} / (I_{S(on)max})$ .
2.  $R_{GND} \geq (-V_{CC}) / (-I_{GND})$

where -I<sub>GND</sub> is the DC reverse ground pin current and can be found in the absolute maximum rating section of the device datasheet.

Power Dissipation in R<sub>GND</sub> (when V<sub>CC</sub><0: during reverse battery situations) is:

$$P_D = (-V_{CC})^2 / R_{GND}$$

This resistor can be shared amongst several different HSDs. Please note that the value of this resistor should be calculated with formula (1) where I<sub>S(on)max</sub> becomes the sum of the maximum on-state currents of the different devices.

Please note that if the microprocessor ground is not shared by the device ground then the R<sub>GND</sub> will produce a shift (I<sub>S(on)max</sub> \* R<sub>GND</sub>) in the input thresholds and the status output values. This shift will vary depending on how many devices are ON in the case of several high side drivers sharing the same R<sub>GND</sub>.

If the calculated power dissipation leads to a large resistor or several devices have to share the same resistor then ST suggests to utilize Solution 2 (see below).

### 3.1.2 Solution 2: a diode ( $D_{GND}$ ) in the ground line

A resistor ( $R_{GND}=1k\Omega$ ) should be inserted in parallel to  $D_{GND}$  if the device drives an inductive load.

This small signal diode can be safely shared amongst several different HSDs. Also in this case, the presence of the ground network will produce a shift ( $\approx 600mV$ ) in the input threshold and in the status output values if the microprocessor ground is not common to the device ground. This shift will not vary if more than one HSD shares the same diode/resistor network.

## 3.2 Load dump protection

$D_{ld}$  is necessary (Voltage transient suppressor) if the load dump peak voltage exceeds the  $V_{CC}$  max DC rating. The same applies if the device is subject to transients on the  $V_{CC}$  line that are greater than the ones shown in the ISO 7637-2: 2004(E) table.

## 3.3 MCU I/Os protection

If a ground protection network is used and negative transient are present on the  $V_{CC}$  line, the control pins will be pulled negative. ST suggests to insert a resistor ( $R_{prot}$ ) in line to prevent the  $\mu C$  I/Os pins to latch-up.

The value of these resistors is a compromise between the leakage current of  $\mu C$  and the current required by the HSD I/Os (Input levels compatibility) with the latch-up limit of  $\mu C$  I/Os.

$$-V_{CCpeak}/I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH} - V_{GND}) / I_{IHmax}$$

Calculation example:

$$\text{For } V_{CCpeak} = -100V \text{ and } I_{latchup} \geq 20mA; V_{OH\mu C} \geq 4.5V$$

$$5k\Omega \leq R_{prot} \leq 180k\Omega.$$

Recommended  $R_{prot}$  values is 10k $\Omega$ .

## 3.4 Open load detection in Off state

Off state open load detection requires an external pull-up resistor ( $R_{PU}$ ) connected between OUTPUT pin and a positive supply voltage ( $V_{PU}$ ) like the +5V line used to supply the microprocessor.

The external resistor has to be selected according to the following requirements:

- no false open load indication when load is connected: in this case we have to avoid  $V_{OUT}$  to be higher than  $V_{OLmin}$ ; this results in the following condition  $V_{OUT} = (V_{PU} / (R_L + R_{PU})) R_L < V_{OLmin}$ .
- no misdetection when load is disconnected: in this case the  $V_{out}$  has to be higher than  $V_{OLmax}$ ; this results in the following condition  $R_{PU} < (V_{PU} - V_{OLmax}) / I_{L(off2)}$ .

Because  $I_{S(OFF)}$  may significantly increase if  $V_{out}$  is pulled high (up to several mA), the pull-up resistor  $R_{PU}$  should be connected to a supply that is switched OFF when the module is in standby.

The values of  $V_{OLmin}$ ,  $V_{OLmax}$  and  $I_{L(off2)}$  are available in the Electrical characteristics section.

**Figure 29. Open load detection in Off state**

### 3.5 Maximum demagnetization energy ( $V_{CC} = 13.5V$ )

Figure 30. Maximum turn Off current versus inductance (for each channel)

Note: Values are generated with  $R_L = 0\Omega$ .

In case of repetitive pulses,  $T_{jstart}$  (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

Note: Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB: Double layer, Thermal Vias, FR4 area= 77mm x 86mm, PCB thickness=1.6mm, Cu thickness=70µm (front and back side), Copper areas: from minimum pad lay-out to 8cm²).

**Pulse calculation formula**

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

where  $\delta = t_p/T$

## 5 Package and packing information

### 5.1 ECOPACK® packages

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second-level interconnect. The category of Second-Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: [www.st.com](http://www.st.com).

## 6 Revision history

**Table 16. Document revision history**

Date	Revision	Changes
7-Jan-2004	1	Initial release.
3-Feb-2006	2	Major series of updates incorporated.
20-Mar-2007	3	Reformatted. Added list of tables and list of figures. Added <a href="#">Section 3.5: Maximum demagnetization energy (VCC = 13.5V)</a> . Added new disclaimer.
01-Jun-2007	4	Updated <a href="#">Table 4: Absolute maximum ratings</a> : EMAX entries. Updated <a href="#">Table 13: Electrical transient requirements</a> :Test level values III and IV for test pulse 5b and notes. <a href="#">Figure 34: Thermal fitting model of a double channel HSD in PowerSSO-12™</a> added note.
17-Dic-2007	5	Updated <a href="#">Section 4.1: PowerSSO-12™ thermal data</a> : – Changed <a href="#">Figure 32: Rthj-amb vs. PCB copper area in open box free air condition (one channel ON)</a> . – Changed <a href="#">Figure 33: PowerSSO-12™ Thermal impedance junction ambient single pulse (one channel ON)</a> . – Updated <a href="#">Table 14: Thermal parameters</a> : R1 and R7 values changed from 1.2 to 0.1 °C/W. R2 = R8 values changed from 6 to 0.2 °C/W. R3 value changed from 7 to 4 °C/W. R4 values changed from 10/10/9 to 8/8/7 °C/W. C1=C7 values changed from 0.0008 to 0.0001 °C/W. C2=C8 values changed from 0.0016 to 0.002 °C/W.
24-Sep-2013	6	Updated disclaimer.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
