

THAT 1606/1646-DEMO

FEATURES

- Basic Line Driver Circuit
- Independent outputs for THAT1646 and THAT1606 ICs
- COMBO (XLR & TRS) Line Input Connector
- XLR and 1/4" TRS Output Connectors
- DAC Input Connector with 3rd order low pass filter
- Generous Prototyping Area

APPLICATIONS

- Verification of 1606/1646 Performance
- Line Driver Evaluation
- Prototyping 1606/1646 Applications
- PCB Layout Reference Design

Description

The THAT 1606/1646-DEMO Demonstration System simplifies evaluating the performance of the 1646 and 1606 OutSmarts Line Driver ICs. Completely assembled and tested, the 1606/1646-DEMO comes with both XLR and TRS connectors for line input and output. In addition, a DAC input is supplied on a 3-pin header for easy connection to a digital to analog converter differential output. The DAC input passes the signal through a 50kHz 3rd order low-pass filter that can be optionally connected to the 1606 IC.

To facilitate prototyping specific applications, spare circuit board area is perforated with plated-through holes. This makes the board particularly useful for experimentation. Power connections are made through 5-way binding posts, so no special cables are required to power the board. It runs from $\pm 4V$ to $\pm 18V$ supplies.

With a 1606/1646-DEMO and standard audio cables, an engineer can start testing the performance of basic 1646 and 1606 circuitry and begin trying out additional circuit ideas in minutes.

THAT 1606/1646 Demo Block Diagram

Input/Output Connections		
Connector	PCB Label	Function
J7	V+	Positive voltage from power supply ¹
J8	GND	Ground connection from power supply
J9	V-	Negative voltage from power supply ¹
J10	Line Input	Balanced analog input
J5	1606 Output	Differential analog output from THAT 1606
J1	1606 Output	Differential analog output from THAT 1606
J11	1646 Output	Differential analog output from THAT 1646
J6	1646 Output	Differential analog output from THAT 1646
1. Nominal power supply voltages are +/- 15V. The allowable power supply voltage range is +/- 18V to +/- 4V.		

Jumper Configuration			
Connector	PCB Label	Selection	Function Selected
J3	Input Select	IN +	Analog input from line input
		DAC	Analog input from DAC input
J4	Input Select	IN -	Analog input from line input
		DAC	Analog input from DAC input
Note: J3 and J4 must be configured to select the same analog signal source

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
