9	D2	H/L	Display Data	18	C	-	LED B/L -

## CONTRAST ADJUSTMENT

Both displays EA DIP081-CNLED and -CHNLED do have an driving voltage for contrast of typ. 4,9V. For 3.3V operation additional -3.3V is required.

Version EA DIP081-CHNLED for ext. temperature range -20..+70°C does have a built-in temperature compensation; so there's no need for contrast adjustment while operation.

## BACKLIGHT

Backlight do need an external resistor limiting the current limiter. Calculation is:  $R=U/I$ , so at 5V supply:

$$R_{\text{gelb/grün}} = (5,0V - 4,1V) / 0,15A = 6 \text{ Ohm}$$

**Caution:** do never drive backlight direct with 5V; damage may come suddenly.

## CREATING YOUR OWN CHARACTERS

All these character display modules got the feature to create 8 own characters (ASCII Codes 0..7) in addition to the 192 ROM fixed codes.

- 1.) The command "CG RAM Address Set" defines the ASCII code (Bit 3,4,5) and the dot line (Bit 0,1,2) of the new character. Example demonstrates creating ASCII code \$00.
- 2.) Doing 8 times the write command "Data Write" defines line by line the new character. 8th. byte stands for the cursor line.
- 3.) The new defined character can be used as a "normal" ASCII code (0..7); use with "DD RAM Address Set" and "Data Write".

Set CG RAM Address				Data								
Adresse		Hex										
0	1	0	0		7	6	5	4	3	2	1	0
				0	0	0	0	1	0	0	\$04	
				0	0	0	1	0	0	\$04		
				0	1	0	0	0	0	\$04		
				0	1	1	0	0	0	\$04		
				1	0	0	0	1	0	\$15		
				1	0	1	0	1	0	\$0E		
				1	1	0	0	0	0	\$04
