

NB7V72M

1.8V / 2.5V Differential 2 x 2 Crosspoint Switch with CML Outputs Clock/Data Buffer/Translator

Multi-Level Inputs w/ Internal Termination

Description

The NB7V72M is a high bandwidth, low voltage, fully differential 2 x 2 crosspoint switch with CML outputs. The NB7V72M design is optimized for low skew and minimal jitter as it produces two identical copies of Clock or Data operating up to 5 GHz or 6.5 Gb/s, respectively. As such, the NB7V72M is ideal for SONET, GigE, Fiber Channel, Backplane and other clock/data distribution applications. The differential $\overline{IN}/\overline{IN}$ inputs incorporate internal 50 Ω termination resistors and will accept LVPECL, CML, or LVDS logic levels (see Figure 10). The 16 mA differential CML outputs provide matching internal 50 Ω terminations and produce 400 mV output swings when externally terminated with a 50 Ω resistor to V_{CC} (see Figure 11). The NB7V72M is the 1.8 V/2.5 V CML version of the NB7L72M and is offered in a low profile 3x3 mm 16-pin QFN package. Application notes, models, and support documentation are available at www.onsemi.com.

The NB7V72M is a member of the GigaComm™ family of high performance clock products.
