

## FEATURES

- 1.8 V to 5.5 V single supply
- $\pm 2.5$  V dual supply
- 3  $\Omega$  on resistance
- 0.75  $\Omega$  on resistance flatness
- 100 pA leakage currents
- 14 ns switching times
- Single 8-to-1 multiplexer ADG708
- Differential 4-to-1 multiplexer ADG709
- 16-lead TSSOP package
- Low power consumption
- TTL-/CMOS-compatible inputs
- Qualified for automotive applications

## APPLICATIONS

- Data acquisition systems
- Communication systems
- Relay replacement
- Audio and video switching
- Battery-powered systems

## GENERAL DESCRIPTION

The ADG708/ADG709 are low voltage, CMOS analog multiplexers comprising eight single channels and four differential channels, respectively. The ADG708 switches one of eight inputs (S1 to S8) to a common output, D, as determined by the 3-bit binary address lines A0, A1, and A2. The ADG709 switches one of four differential inputs to a common differential output as determined by the 2-bit binary address lines A0 and A1. An EN input on both devices is used to enable or disable the device. When disabled, all channels are switched off.

Low power consumption and an operating supply range of 1.8 V to 5.5 V make the ADG708/ADG709 ideal for battery-powered, portable instruments. All channels exhibit break-before-make switching action preventing momentary shorting when switching channels.

These switches are designed on an enhanced submicron process that provides low power dissipation yet gives high switching speed, very low on resistance, and leakage currents.

On resistance is in the region of a few ohms and is closely matched between switches and very flat over the full signal range. These parts can operate equally well as either multiplexers or demultiplexers and have an input signal range that extends to the supplies.

The ADG708/ADG709 are available in a 16-lead TSSOP.

Figure 2.

## PRODUCT HIGHLIGHTS

1. Single-/dual-supply operation. The ADG708/ADG709 are fully specified and guaranteed with 3 V and 5 V single-supply and  $\pm 2.5$  V dual-supply rails.
2. Low  $R_{ON}$  (3  $\Omega$  typical).
3. Low power consumption (<0.01  $\mu$ W).
4. Guaranteed break-before-make switching action.
5. Small 16-lead TSSOP package.

## ABSOLUTE MAXIMUM RATINGS

$T_A = 25^\circ\text{C}$ , unless otherwise noted.

**Table 4.**

Parameter	Rating
$V_{DD}$ to $V_{SS}$	7 V
$V_{DD}$ to GND	-0.3 V to +7 V
$V_{SS}$ to GND	+0.3 V to -3.5 V
Analog Inputs <sup>1</sup>	$V_{SS} - 0.3\text{ V}$ to $V_{DD} + 0.3\text{ V}$ or 30 mA, whichever occurs first
Digital Inputs <sup>1</sup>	-0.3 V to $V_{DD} + 0.3\text{ V}$ or 30 mA, whichever occurs first
Peak Current, S or D (Pulsed at 1 ms, 10% Duty Cycle Maximum)	100 mA
Continuous Current, S or D	30 mA
Operating Temperature	
Industrial Temperature Range	-40°C to +125°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature	150°C
TSSOP Package, Power Dissipation	432 mW
$\theta_{JA}$ Thermal Impedance	150.4°C/W
$\theta_{JC}$ Thermal Impedance	27.6°C/W
Lead Temperature, Soldering	
Vapor Phase (60 sec)	215°C
Infrared (15 sec)	220°C

<sup>1</sup> Overvoltages at A, EN, S, or D are clamped by internal codes. Current should be limited to the maximum ratings given.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Only one absolute maximum rating can be applied at any one time.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

Figure 3. ADG708 Pin Configuration

Figure 4. ADG709 Pin Configuration

Table 5. ADG708 Pin Function Descriptions

Pin No.	Mnemonic	Description
1	A0	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 7).
2	EN	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 7).
3	V <sub>SS</sub>	Most Negative Power Supply Pin in Dual-Supply Applications. For single-supply applications, it should be tied to GND.
4	S1	Source Terminal. Can be an input or output.
5	S2	Source Terminal. Can be an input or output.
6	S3	Source Terminal. Can be an input or output.
7	S4	Source Terminal. Can be an input or output.
8	D	Drain Terminal. Can be an input or output.
9	S8	Source Terminal. Can be an input or output.
10	S7	Source Terminal. Can be an input or output.
11	S6	Source Terminal. Can be an input or output.
12	S5	Source Terminal. Can be an input or output.
13	V <sub>DD</sub>	Most Positive Power Supply Pin.
14	GND	Ground (0 V) Reference.
15	A2	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 7).
16	A1	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 7).

Table 6. ADG709 Pin Function Descriptions

Pin No.	Mnemonic	Description
1	A0	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 8).
2	EN	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 8).
3	V <sub>SS</sub>	Most Negative Power Supply Pin in Dual-Supply Applications. For single-supply applications, it should be tied to GND.
4	S1A	Source Terminal. Can be an input or output.
5	S2A	Source Terminal. Can be an input or output.
6	S3A	Source Terminal. Can be an input or output.
7	S4A	Source Terminal. Can be an input or output.
8	DA	Drain Terminal. Can be an input or output.
9	DB	Drain Terminal. Can be an input or output.
10	S4B	Source Terminal. Can be an input or output.
11	S3B	Source Terminal. Can be an input or output.
12	S2B	Source Terminal. Can be an input or output.
13	S1B	Source Terminal. Can be an input or output.
14	V <sub>DD</sub>	Most Positive Power Supply Pin.
15	GND	Ground (0 V) Reference.
16	A1	Digital Input. Controls the configuration of the switch, as shown in the truth table (see Table 8).

## TERMINOLOGY

### $V_{DD}$

Most positive power supply potential.

### $V_{SS}$

Most negative power supply in a dual-supply application. In single-supply applications, tie  $V_{SS}$  to ground at the device.

### GND

Ground (0 V) reference.

### S

Source terminal. Can be an input or output.

### D

Drain terminal. Can be an input or output.

### Ax

Logic control input.

### EN

Active high enable.

### $R_{ON}$

Ohmic resistance between D and S.

### $R_{FLAT (ON)}$

Flatness is defined as the difference between the maximum and minimum value of on resistance as measured over the specified analog signal range.

### $I_S (Off)$

Source leakage current with the switch off.

### $I_D (Off)$

Drain leakage current with the switch off.

### $I_D, I_S (On)$

Channel leakage current with the switch on.

### $V_D (V_S)$

Analog voltage on Terminal D and Terminal S.

### $C_S (Off)$

Off switch source capacitance. Measured with reference to ground.

### $C_D (Off)$

Off switch drain capacitance. Measured with reference to ground.

### $C_D, C_S (On)$

On switch capacitance. Measured with reference to ground.

### $C_{IN}$

Digital input capacitance.

### $t_{TRANSITION}$

Delay time measured between the 50% and 90% points of the digital inputs and the switch on condition when switching from one address state to another.

### $t_{ON (EN)}$

Delay time between the 50% and 90% points of the EN digital input and the switch on condition.

### $t_{OFF (EN)}$

Delay time between the 50% and 90% points of the EN digital input and the switch off condition.

### $t_{OPEN}$

Off time measured between the 80% points of both switches when switching from one address state to another.

### Off Isolation

A measure of unwanted signal coupling through an off switch.

### Crosstalk

A measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance.

### Charge

A measure of the glitch impulse transferred from injection of the digital input to the analog output during switching.

### Bandwidth

The frequency at which the output is attenuated by 3 dB.

### On Response

The frequency response of the on switch.

### On Loss

The loss due to the on resistance of the switch.

### $V_{INL}$

Maximum input voltage for Logic 0.

### $V_{INH}$

Minimum input voltage for Logic 1.

### $I_{INL} (I_{INH})$

Input current of the digital input.

### $I_{DD}$

Positive supply current.

### $I_{SS}$

Negative supply current.

## APPLICATIONS INFORMATION

### POWER SUPPLY SEQUENCING

When using CMOS devices, take care to ensure correct power supply sequencing. Incorrect power supply sequencing can result in the device being subjected to stresses beyond the maximum ratings listed in Figure 4.

Always apply digital and analog inputs after power supplies and ground. For single-supply operation, tie  $V_{SS}$  to GND as close to the device as possible.

OUTLINE DIMENSIONS

COMPLIANT TO JEDEC STANDARDS MO-153-AB

Figure 31. 16-Lead Thin Shrink Small Outline Package [TSSOP] (RU-16)

Dimensions shown in millimeters

ORDERING GUIDE

Model <sup>1, 2</sup>	Temperature Range	Package Description	Package Option
ADG708BRU	-40°C to +125°C	16-Lead Thin Shrink Small Outline Package [TSSOP]	RU-16

<sup>1</sup> Z = RoHS Compliant Part.

<sup>2</sup> W = Qualified for Automotive Applications.

AUTOMOTIVE PRODUCTS

The ADW54008 models are available with controlled manufacturing to support the quality and reliability requirements of automotive applications. Note that these automotive models may have specifications that differ from the commercial models; therefore, designers should review the Specifications section of this data sheet carefully. Only the automotive grade products shown are available for use in automotive applications. Contact your local Analog Devices account representative for specific product ordering information and to obtain the specific Automotive Reliability reports for these models.

## Данный компонент на территории Российской Федерации

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
