General information

The DIN 41612/IEC 60603-2 connector family consists of 13 basic sizes and many complementary versions.
It was developed for use in 19" rack systems in accordance with **DIN 41494 / IEC 60297.** The large number of different sizes and the efficient connection techniques have made it possible to install these connectors for in extremely wide range of applications.
Typical areas of application:

- Connection between plug-in card and back-panel wiring
- Connection between two PCB's arranged one above the other
- Connection to peripheral equipment with connector housings as accessories
- As periphery connectors for external interfaces from the wiring side

Main features

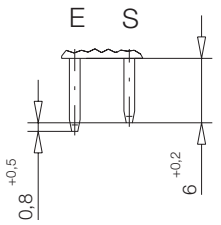

- Separable printed circuit board connectors
- International approvals, such as UL or CSA
- 13 connector sizes with the same plug-in and mounting conditions
- Additional connector sizes complementing the DIN 41612/IEC 60603-2 such as half or tripled sizes
- Different coding systems available
- Up to 160 contacts per connector
- Two to five row connectors possible
- Various termination types available
- 2.54 mm (0.1") basic pitch
- Early mate/late break contacts available on request
- Wide range of accessories
- Complete interface system available
- All female connectors mentioned in this data sheet have **dual sided female contact spring.**

This contact principle offers a max. security in contacting and remaining contact resistence in extreme situations.

Early mate/late break

For the connectors size B, C, Q, R, D, E and F 0.8 mm early mate/late break male contacts can be loaded in any position in rows a, b, c, d, e and z.
The early mate/late break of the high current connector sizes H11 and H15 have a length of 3.5 mm (1,5 mm on request).
Other lengths of early mate/late break contacts on request.

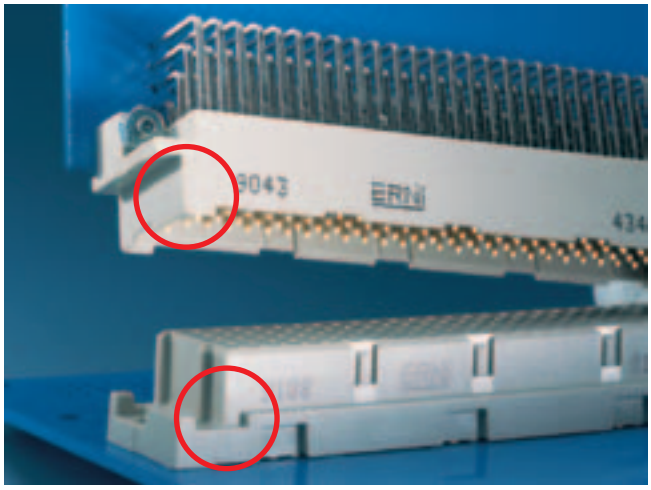

Mating length

E = early mate, late break

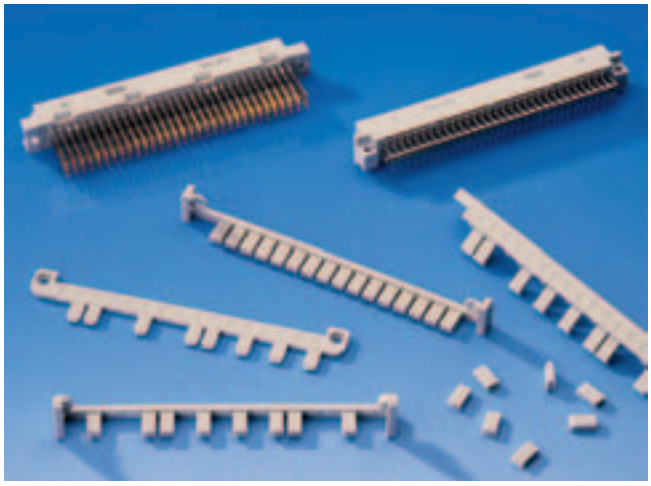

S = standard

Pre-centering

For applications with early mate/late break contacts the male connector insulators with pre-centering ensure even more reliable mating.
The insulators of the female connectors have a recess at the appropriate point. The dimensions of these versions do not conform to the specifications of DIN 41612/IEC 60603-2.
The ordering details are not listed in this data sheet but they can be supplied on request.
Male connectors with pre-centering do not mate with female connectors without a pre-centering recess.

Codings

Various coding systems are available for the connectors contained in this data sheet.

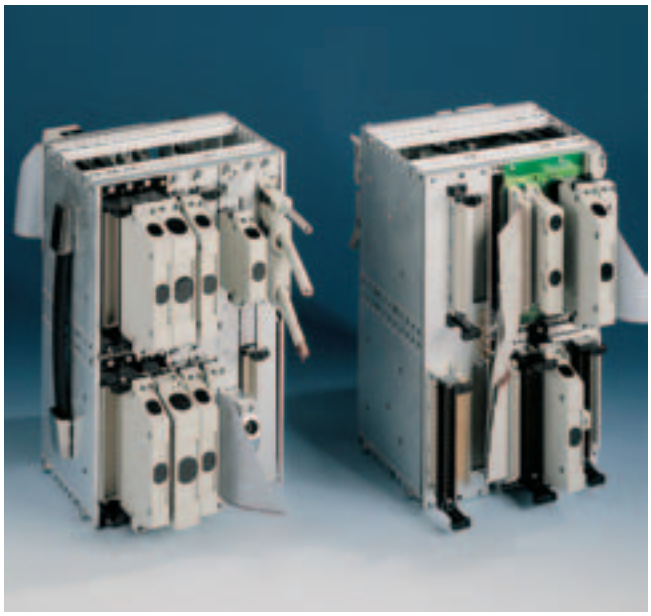

- **Coding with coding strips.** These coding strips are mounted together with the connector. For ERNI coding strips no extra modular space is required in the 19" rack system.
- **Integrated coding with coding wedges.** In this case coding wedges are fitted into the female connectors and the male connectors are provided with corresponding recesses.
- **Integrated coding with coding pins.** In this case coding pins are inserted into the female connectors and holes are drilled in the male connectors in the coding positions.

Retentive clip

For efficient mounting of the right angle connectors ERNI offers a retentive clip.
These clips are pre-mounted by ERNI. The connectors are attached to the pc board with this clip, which locks into the drillholes on the pc board, max. thickness of pcb = 1.6 mm. Since the clips can also be soldered, plated-through holes are recommended in such applications.

Wiring accessories

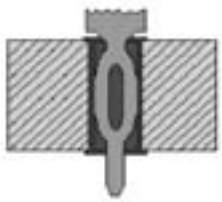

The ERNI connector housing range together with the ERNI interface connector system offers optimum protection for all plug-in interfaces for DIN 41612/IEC 60603-2 connectors. The range is dimensioned for the 19" rack system. Suitable variations are available for nearly every type of connector. Whether you intend to use a short type B/2 connector or a 64-pin insulation displacement connector, the ERNI range offers you the ideal housing.

- **KSG 173** Size: B, C, D, E, M, H11, H15, Q, R, E160, TE160, RD128
- **KSG 193** Size: B/2, C/2, Q/2, R/2
- **KSG 203** Size: F, Fi
- **KSG 253** Size: C (IDC)
- **KSG 204** Size: F, Fi

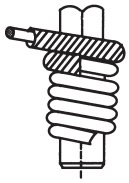

The connector housings are prepared for a maximum of 3 cable outlets and are offered with strain-relief clamps. A metal-plated version for shielding purposes is also available. For plug-in interfaces on the front or back panel of the rack ERNI has developed guide elements and shrouds in collaboration with well-known customers. These elements permit exact guidance for correct mating and provide robust screw locking. In addition you can fit a coding device.

Basic dimensions for all sizes of the connector family according to DIN 41612/IEC 60603-2

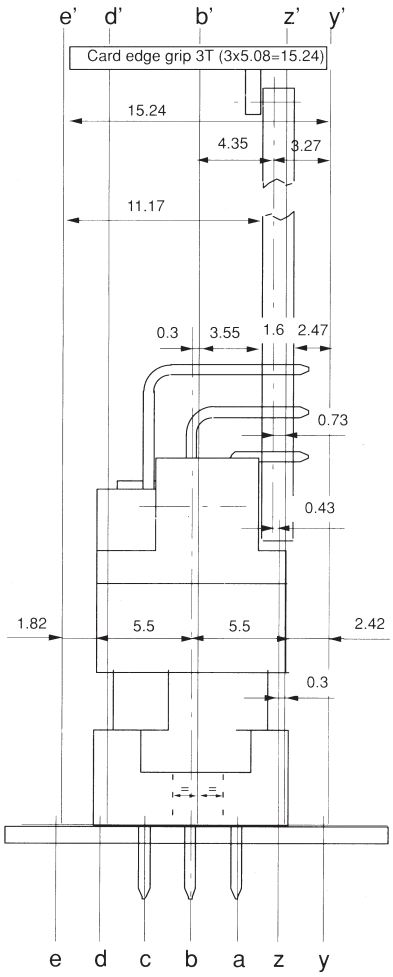

Important dimensions

Letter of dimension	Dimensions mm	Explanation
C_1	95	Maximum length of the connector assigned to the back panel
M	15.5 to 17.3	Mating zone for reliable contact making
X_1	90	Distance between the mounting holes of the connector assigned to the back panel
X_2	88.9	Distance between the mounting holes of the connector assigned to the assembly
a	5.63	Distance between the reference point and centerline through contact no. 32 with regard to the connector assigned to the back panel
b	0.3	Distance between the reference line (line through the fixing holes) and centerline of row b (also called offset)
c	nx2.54	Pitch of the terminals of the connector assigned to the back panel)
d	3.55	Distance between the reference line and the component side of the PCB
e	5.3	Distance between the edge of the PCB and the first row of holes for terminals of the connector mounted on the assembly
f	2.54	Distance between the mounting holes and the first row of holes for terminals of the connector mounted on the assembly
g	5.08	Distance between the mounting holes and the holes for contacts no. 1 and no. 32 of the connector assigned to the assembly
h	85	Minimum length of the panel cutout or minimum distance between the mounting rails for the connector assigned to the back panel
i	2.5	Maximum thickness of mounting plate or mounting rails
u	12.4 to 14.2	Mating zone for reliable contact making

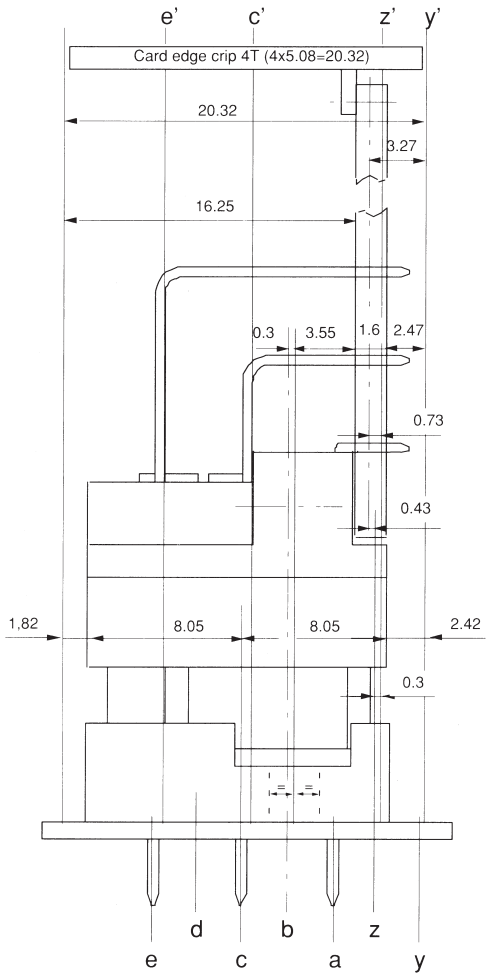

Mounting dimensions of the connectors

in the modular arrangement of the 19" rack system

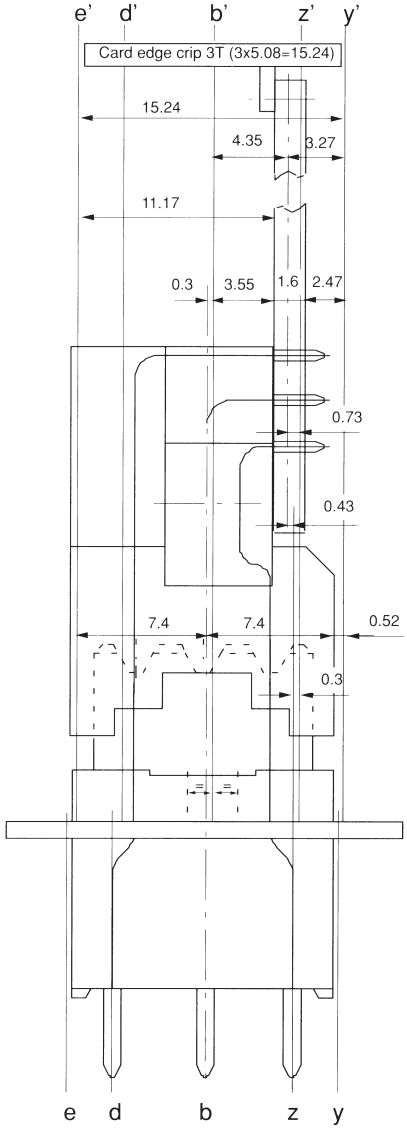

Exact position of connectors **size C**

Exact position of connectors **size E**

Exact position of connectors **size F**

These drawings contain important dimensions for the use of DIN 41612/IEC 60603-2 connectors in 19" rack systems.

The mounting dimensions shown for size F connectors illustrate how the width of 3 x 5.08 mm is maintained by means of a pitch offset between mating side and soldering side. These size F connectors can be used with 3U wide daughter cards in a 3U (3x5.08) 19" slot.

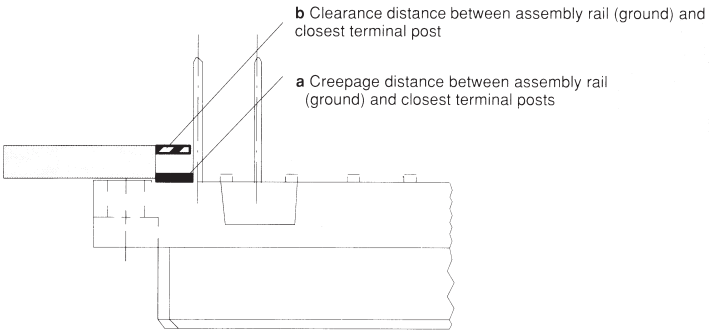

Clearance and creepage distances

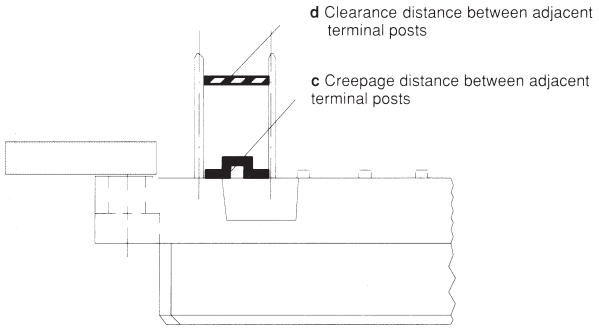

for DIN 41612/IEC 60603-2 male and female connectors

Tow different clearance and creepage distances are always distinguished for connectors:

1. The distances a and b are the shortest clearance and creepage distance between assembly rail (chassis) and the closest terminal post.
2. The distances c and d are the shortest clearance and creepage distance between 2 adjacent terminal posts in unwrapped state.

All the values apply to the connectors prior to their termination to the printed circuit board. The influence of the wiring on the clearance creepage distance and must be taken into account.

Minimum clearance and creepage distances according to IEC 60664

When calculating the minimum clearance and creepage distance for your application, the guidelines contained in IEC 60664 Parts 1 and 2, January 1989 issue are applicable. This standard contains the relevant values in tabular form.

Calculation of minimum **clearance** distances:
The minimum clearance primarily depends on the following factors:

- Rated impulse voltage for clearance distances (depending on overvoltage category).
- Pollution degree

Calculation of minimum **creepage** distance:
The minimum creepage distance is primarily dependent on the following factors:

- Operating voltage
- Pollution degree
- CTI values (comparative tracking index) of the insulation material
- Contents of insulation body

DIN 41612 / 60603-2 Pressfit Connectors ERNIPRESS™

In electronic and electrical equipment the solderless pressfit technique has become more and more widespread in times of packaging miniaturization and higher packing densities.

ERNI's compliant pressfit zone is a reliable connection between the PC Board and the connector.

ERNI offers a comprehensive pressfit range for all connector types. Also included in the ERNI pressfit range are the right angled pressfit connectors used for daughter card connectors. The pressfit zone is designed that the contact fit in the copper layer of the plated-through hole of a PCB. The tin plating of the hole is penetrated. The result is a reliable gas tight and therefore corsion-free contact with low electrical resistance.

Solderless pressfit connectors are an integral part of today's modern electronic packaging bus systems. The main function of a bus system is to connect assemblies with one another and their power supply. Since plug-in modules are becoming more and more powerful, the demands placed on the bus systems are continually increasing. Higher system speeds and the overall shrinking of the connection structure are making the bus system a more crucial part of the control system.

With newer assembly processes for PC Boards, like the pressfit termination, the mechanism is now available to utilize more powerful electro mechanical components. ERNIPRESS™ solderless pressfit connectors are a perfect fit for such applications. Furthermore, there are many applications where the delicate structure of the PC Board cannot withstand the harshness of automated soldering processes.

For DIN connectors ERNI has two pressfit zones in use. Both zones require exactly the same hole specifications of the PCB.
1. EE-zone contour like a boat

2. EN-zone eye of the needle

Required specifications of the PCB

In manufacturing the PC Board for the pressfit technique it is essential that the recommended DIN PC Board specifications are met. The dimensions of the plated through drillholes and their hole design are described in IEC 60352-5.

The quality and long-term performance of a pressfit connector are influenced by the following factors:

a) Base material of the PCB.
To meet UL requirements, epoxy glass fabric type Hgw 2372.1 to DIN 7735, FR 4, should be used.

b.) Adherence to drillhole tolerances.
For optimum and uniform plating of the PCB, a selective rack technique, flexible anode arrangement and continuous plating bath monitoring are suggested.

c.) Drillhole diameter, positioning and diameter tolerances.
Maintaining the correct roughness of the drillhole wall and restricting drill bit travel are critical production processes.

d.) PCB hole and layout requirements.
A minimal residual ring width of 0.1 mm, finished hole diameter tolerances, layer thicknesses, and a high quality consistent conductive pattern are all critical.

e.) Insertion and retention forces.
Measurement of these forces should be checked.

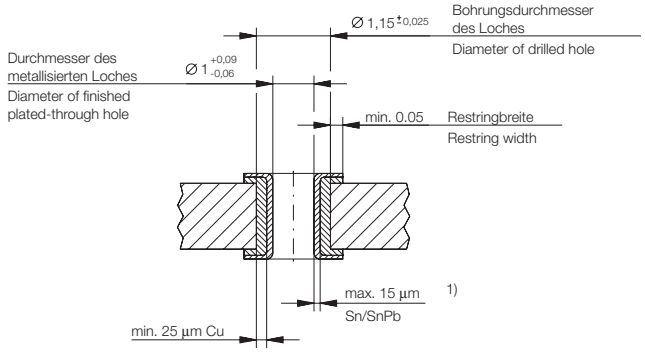

Insertion and retention forces

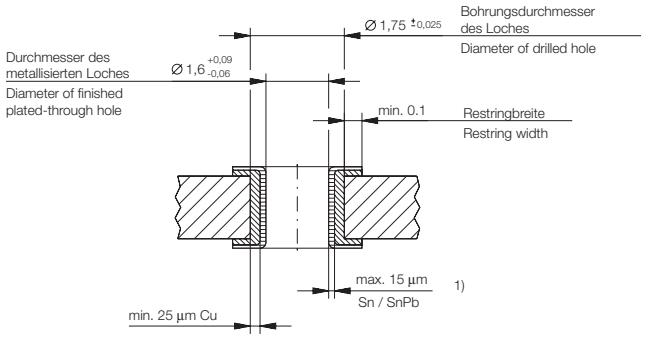

The design of the pressfit zone of the ERNIPRESS™ connectors performs a dual function. On the one hand this design has high elasticity and therefore can accomodate large hole tolerances. On the other hand, the pressfit zone's design ensures high edge loading at the copper layer of the PCB hole resulting in a gas-tight, corrosion-free and mechanically secure connection.

Due to the special shape of the pressfit zone, insertion forces are not detrimental to the hole plating.

Retention forces of the contacts in the PCB hole are sufficient to withstand the torques which occur during wire wrap termination. Typical average values for retention force are between 50 – 110 N per contact depending upon PCB thicknesses.

Hole design

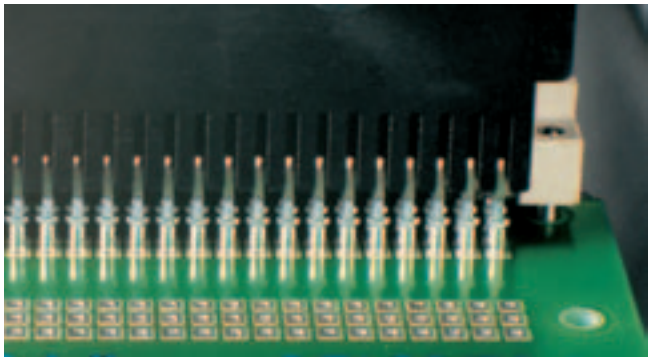

Press-in tools

Vertical Pressfit Connectors

The male and female connectors are assembled into the PC Board in a one-step operation. No additional securing such as with screw hardware is necessary.
Pressfitting of female connector sizes B, B/2, B/3, C, C/2, C/3, M, D, E and F is performed with the aid of a press-in tool which transmits the insertion force to the individual contacts.
For female connector sizes B and C, an additional version is offered which can be pressfitted with just a flat press-in tool. Insertion force is absorbed by the connector housing.
Female connector sizes E 160, H 11 and H 15 are similarly pressfitted with a flat press-in tool.
When pressfitting the inverted male connectors the insertion force is directly loaded on the male contacts.

Right Angle Pressfit Connectors

The male connectors and the inverted female connectors have right-angled pressfit terminations with a shoulder.
The appropriate press-in tool with matching cavities, enables the pressfitting of the connectors into the PCB.
The press-in forces are absorbed by the contact shoulder.

DIN 41612 / IEC 60603-2 Connectors

Type M Male

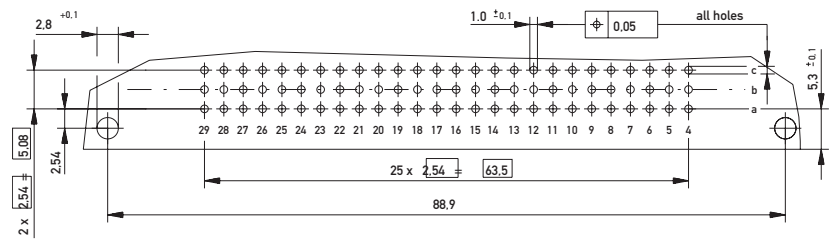

The Type M mixed connector series based on a 100" (2.54mm) pitch in accordance with the DIN41612/IEC 60603-2 specification. This series of connectors is designed to accommodate a variety of coaxial and high current contacts which are also used in other popular connector systems such as the 2mm Hard Metric Type M connectors.
The male and female connectors have 2, 4, 6, 8 or 10 empty "cavities" to accommodate the special contacts.
The versatility of mixing both signal and either high current or coax contacts increases the usage of this connector in tele-communication and data processing applications.

Special Contacts for Type M Male and Female

These special contacts, available in both Coax and High Current are inserted into the empty cavities provided in the Type M connector. The special contacts must be ordered separately as they are typically crimped or soldered onto the cable before insertion into the connector housing.
The coax contacts are available in 50 and 75 Ω in both right angle and straight configurations. ERNI offers contacts that can be crimped or soldered to cable or even soldered directly onto the PC board.
The high current contacts are available for 10, 20 and 40 amps. They can be soldered directly to the board or soldered or crimped to cable. Again, they are offered in both right angle or straight. Special high current versions are also available to assemble into the board. The pressfit contacts are designed to be used with the modified female connectors and to sit flush on the board.
Both the coax and high current contacts are simply snapped into the housing. No special tooling is required for insertion with the exception of the pressfit high current contact. A pressfit tool is required to press the entire assembly with the power contact into the board. An extraction tool is available if it would become necessary to remove any one of the special contacts.

Type H7/F24

Size H7/F24 connectors have integral coding using coding pins. The male connectors have drill centering recesses which require the complete hole to be drilled for coding pin loading. The coding pins from the male connectors can then be inserted into the complementary holes predrilled in the female connectors.

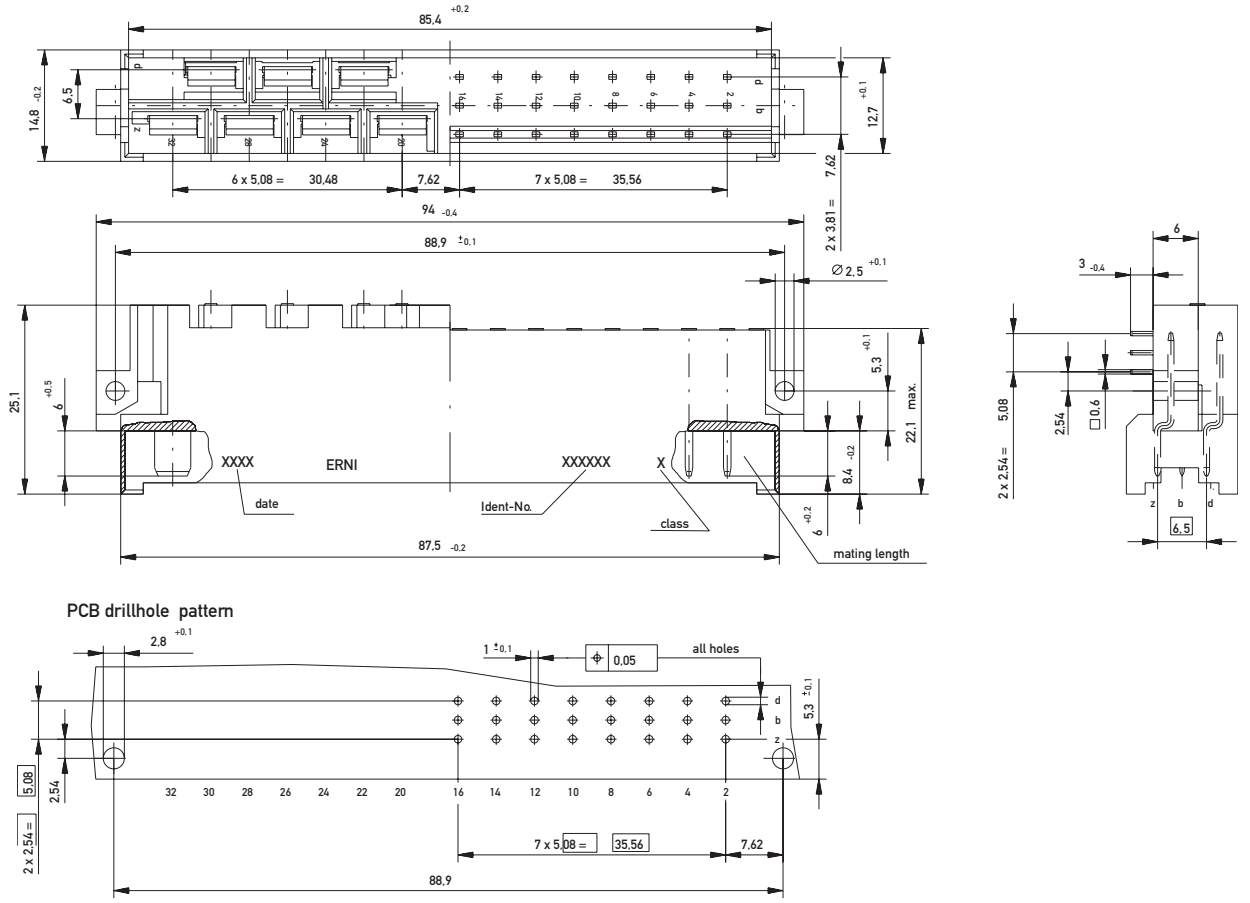

The 7 high-current contacts of H7/F24 connectors are hard silver plated and their electrical and mechanical performance conforms to performance level 1. The 24 signal contacts are conform to standard size F. The contacts are gold plated in accordance to their performance levels, the terminals are tin-plated.

Insulation Displacement Connector (IDC)

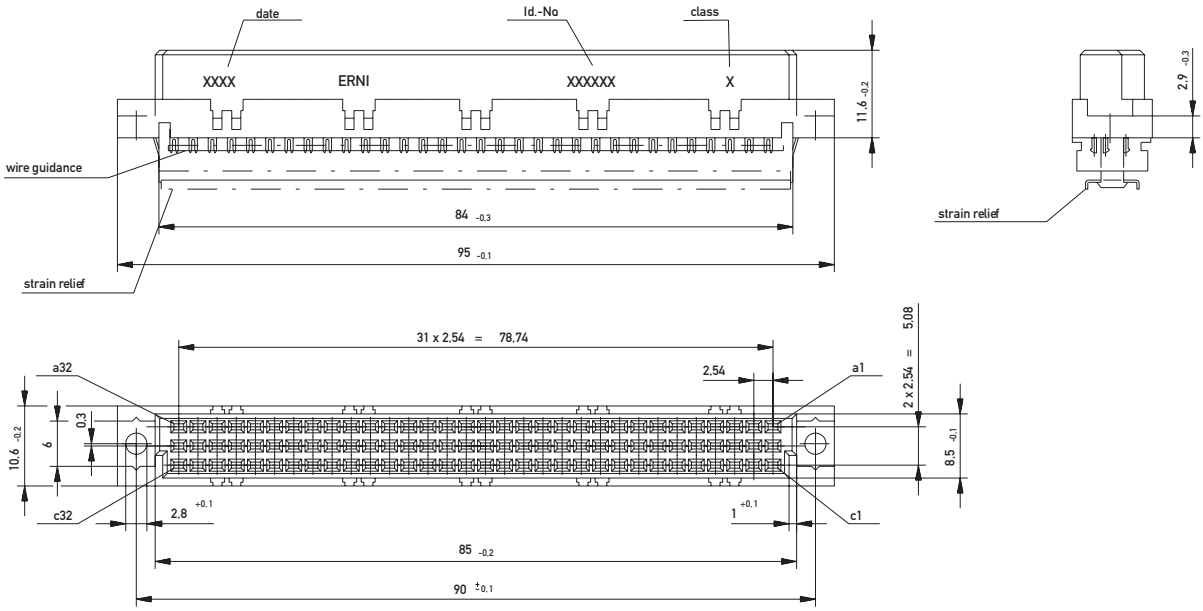

ERNI insulation displacement connectors similar to DIN 41612/IEC 60603-2 are suitable for assembling flat ribbon cables.

The female connectors are available for the standard pin numbers 64 and 96.

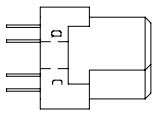

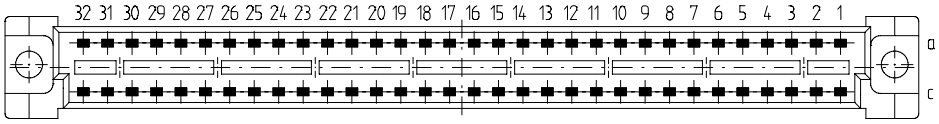

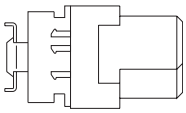

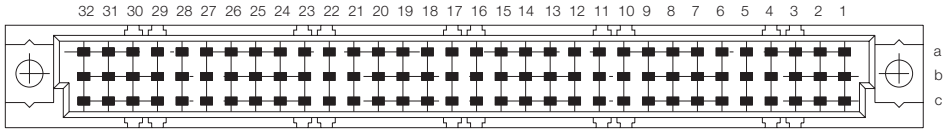

- Female connectors size C, 64-pin, rows a c.
- Fenale connectors size C, 96-pin, ows a b c.

The flat ribbon cable fixed to the cable guide is pressed onto the insulation displacement contacts of the female connector using an easy to use tool (pliers or hand lever press).
A reliable connection is made through a double insulation displacement contact. The pointed ends puncture the insulation material of the flat cable and make contact with the conductors at high pressure.

Dimensional Drawing

Ordering Information

64	IDC	–	–	2	–	**594470**
						
96	IDC	–	–	1	–	**123905**

Application example for DIN-IDC connectors

For the use of female connectors with insulation displacement contacts as interface connectors from the wiring side of the rack ERNI has developed special shrouds. These Shrouds are available in various heights.

(All dimensions in mm)

Connector Type	Contact length A	PCB thickness B	Shroud height C	Part–No. Shroud
C, R	13	1,6	12,5	**414715**
	13	2,4	12,5	**414715**
	13	3,2	11,4	**434286**
	17	2,4	16,0	**414219**
	17	3,2	15,2	**333139**
	20	3,2	18,2	**413971**

The female insulation displacement connector can be screwed to the shroud with a cheese-head tapping screw B2.2 x 9.5 DIN 7971.

Crimp snap-in Connectors (CST)

General

Where the termination of interconnecting cables is required, crimp snap-in termination represents an efficient wiring method.

Crimp snap-in contacts are connected to the wires by use of suitable crimping tools. The contacts are supplied either singly or suspended from a strip.

Contacts efficiently assembled in this manner snap into the crimp snap-in mouldings provided, thus forming ready equipped connectors.

Crimp snap-in connectors are particulary suitable for flexible wiring with varying numbers of pins.

Hand tools or automatic crimping machines are available for crimping.

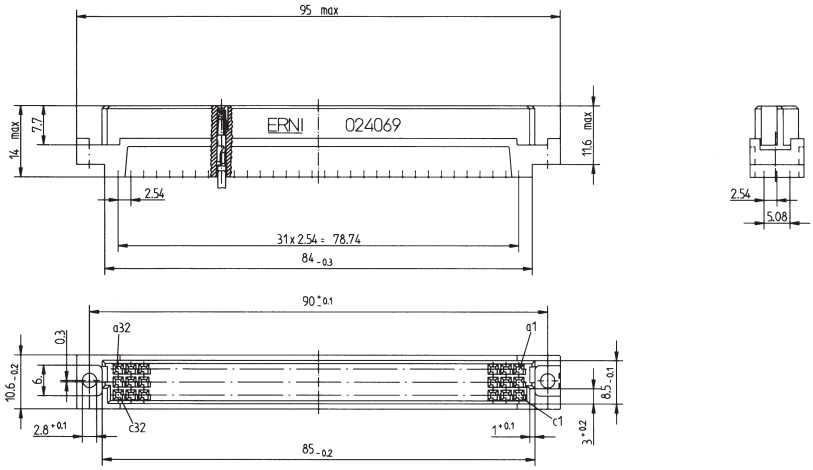

Main features

- Available housing sizes
  - size C with 96 contact cavities, rows abc
  - size C/2 with 48 contact cavities, rows abc
  - size E 160 with 160 contact cavities, rows abcde
  - Special and mixed designs
- Cantilever female contacts for constant contact resistance
- Approved female contact design in the mating zone
- Assembly with standard tools
- Suitable for the ERNI interface connector system (connector housings for DIN connectors on front panel and wiring sides)
- Suitable for wire of AWG 28 – 20
  Wire cross section 0.08 – 0.56 mm^2
- Contacts can be detached from the female connector moulding with a simple extraction tool.

Application example for costumized version

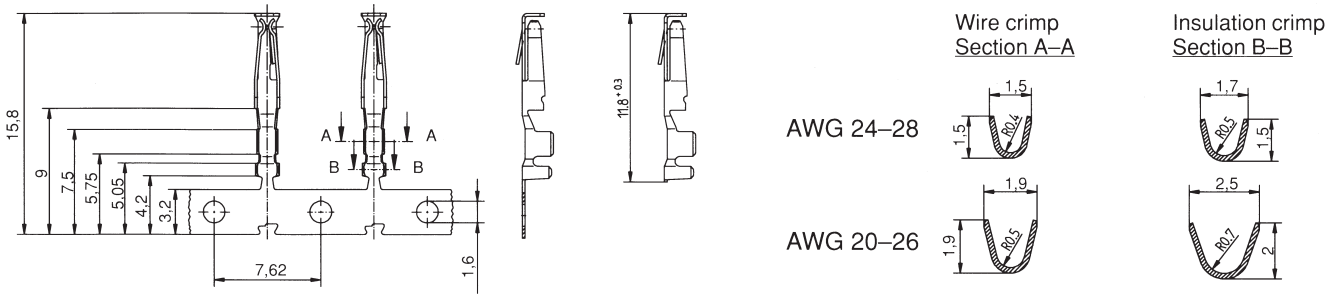

Interesting solutions arise in the application of crimp contacts.

We have developed a 70-pin female connector housing together with a well-known manufacturer of programmable controllers.
We wish to use this example to illustrate that we are constantly developing components in cooperation with our customers.

Perhaps your company also has applications which you may wish to discuss with one of our field sales engineers.

	20–26	0,56–0,14	207	**234062**	**234063**	**234064**

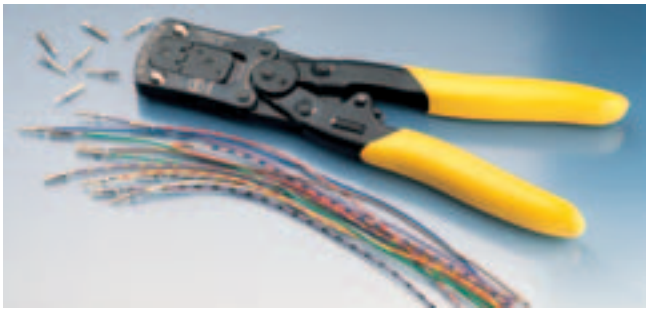

Crimp contacts from ERNI are characterized by their precision.

The two opposite spring legs guarantee a constant contact.

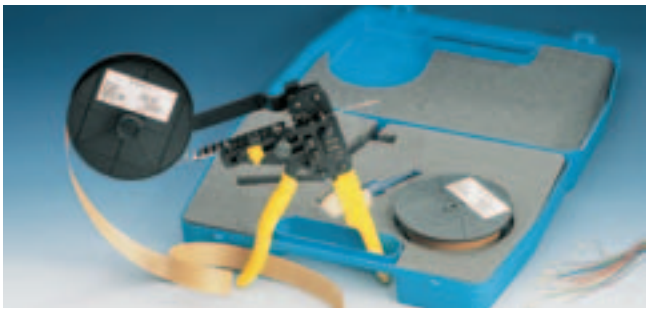

Precise positioning of the contacts in the female connector housing is achieved by using of the box-type design in the front zone of the contact.
A spring-loaded barb on the side locks the contacts in the female connector housing.

This locking can be undone easily with a small tool.

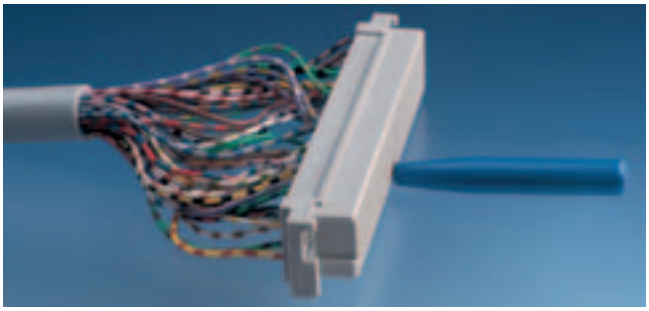

Assembly tools for DIN crimp connectors
Technical data and ordering details

	Part no.
Hand tool for loose contacts AWG 20 – 28 0,56 – 0,08 mm²	**014374**

	Part no.
Hand tool for contact reels with 500 contacts including reel holder and adjustable feed	**014375**

	Part no.
Disassembly tool for all AWG ranges	**471555**

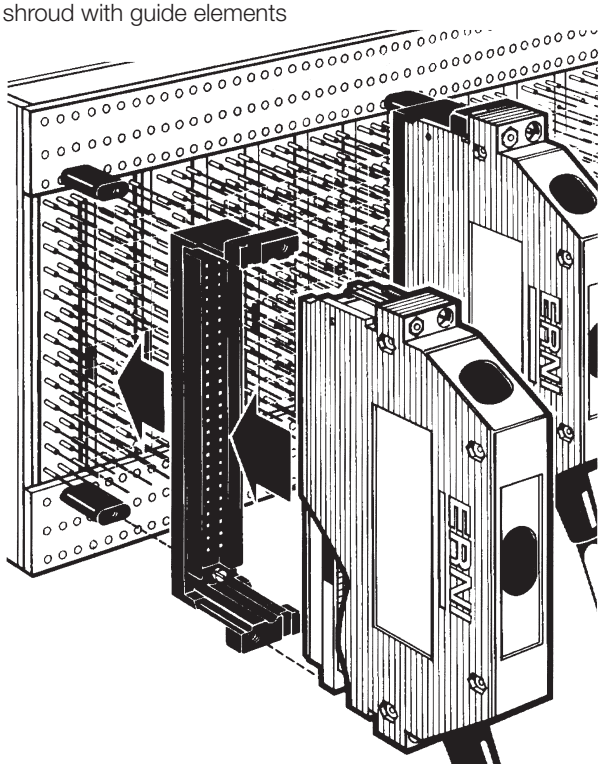

Crimp presses are available for the automated crimping.
Please refer to our ERNI-team when purchasing this press.

The interface connector system from ERNI for the front panel and wiring sides

Front panel
with guide elements

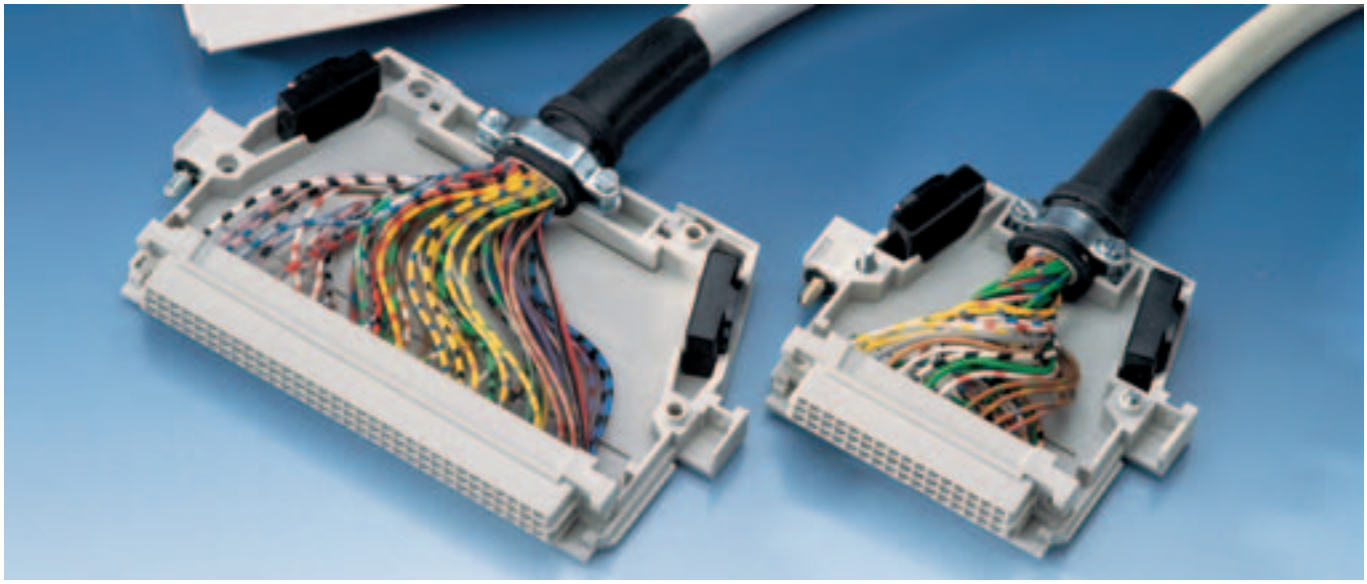

Wiring side
shroud with guide elements

The female connector housings of size C, C/2 and E 160 fit into the cable connector housings of series KSG 173 and KSG 193.
For installation on the front of the rack there are guide elements for mounting in the front panel and guide elements which can be mounted on the rack without a front panel.

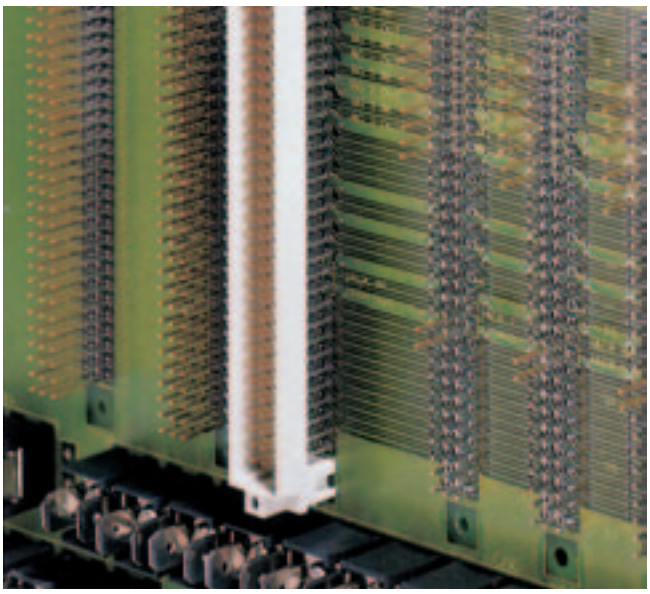

Interface connection is possible from the wiring side with guide elements and shroud.

Do ask for our technical documentation or contact one of our offices or field sales engineers.

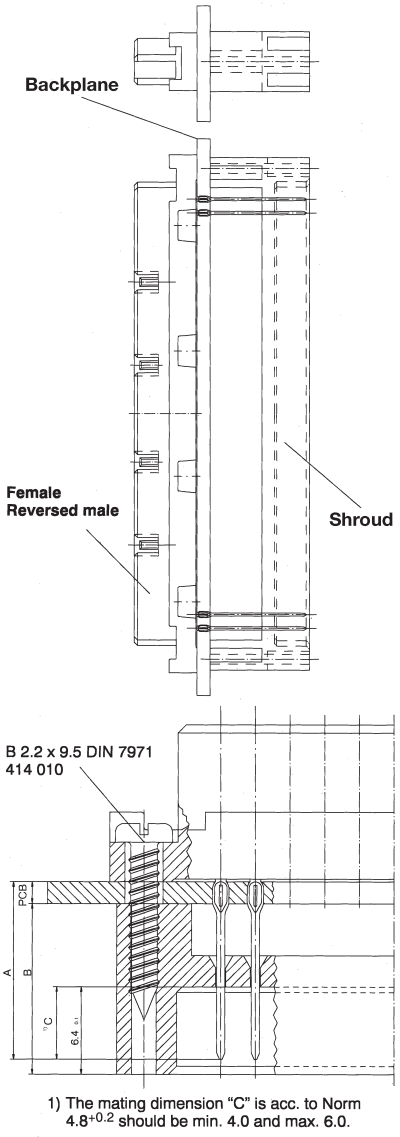

Shroud

for mounting on PC Boards
with connectors size C, R, CD 128, RD 128, E 160, TE 160

Interface on the wiring side of a control system with the aid of interface connectors play an important role in signal transfer. One of the many advantages of the press-fit technique ist that the interface connection to the wiring side can be made easily. This connection to the wiring side of a PC Board loaded with press-fit connectors can be accomplished by simply mounting shrouds to the rear (wiring) side. ERNI has developed shrouds with varying heights for the C, R, CD 128, RD 128, E 160 and TE 160 sizes.
For more information on the ERNI shrouds, please contact your field sales engineers.

1) The mating dimension "C" is acc. to Norm $4.8^{+0.2}$ should be min. 4.0 and max. 6.0.

DIN 41612 / IEC 60603-2 Connectors

Coding Systems

General

In order to ensure proper coding of a DIN 41612 connector and thus protect the valuable components within an electronic device, ERNI offers a variety of coding systems.

• Coding with Coding **Strips**
Separate coding strips are attached directly to each connector half with no additional modular space required in the 19" rack system.

• Integrated Coding with Coding **Tabs**
The coding tabs are plugged into side slots on the female connector while corresponding notch areas on the male connector are removed with coding pliers.

• Integrated Coding with Coding **Pins**
The coding pins are inserted into the predrilled holes on the female connector and drill holes are required on the recess hole points on the male connector at the corresponding locations.

Determining the number of coding possibilities

To maintain connector integrity, the maximum recommended number of coding possibilities is based on using only 1/2 the total available coding slots. For example, in the case of using the coding strips where there are 16 available coding tabs per strip, no more than 8 of the tabs should be removed.
Under this system, the following table Shows the number of coding possibilities for each of the three coding systems.

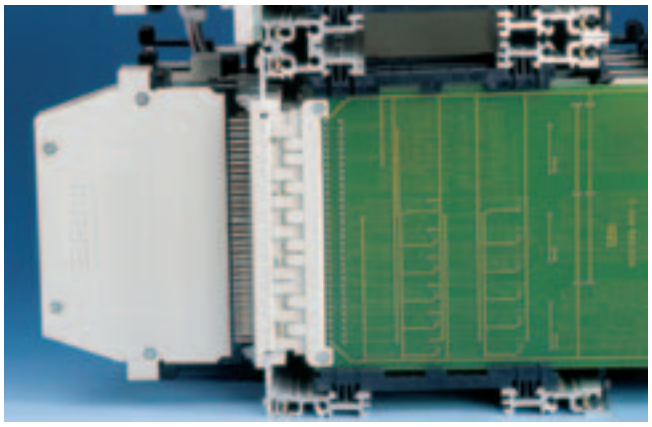

Connector Style	Coding Strips			Coding Tabs	Coding Pins
	Female and Inverse Male Connectors [1]			Female	Female
	F	FL	UE	Connectors	Connectors
B/3, C/3, Q/3, R/3	–	–	–	6	–
B/2, C/2, Q/2, R/2	–	–	–	20	–
B	12870	12870	12870	70	–
C	12870	12870	12870	70	–
D	12870	12870	12870	20	12870
E	12870	12870	12870	–	>12870
F	–	–	–	–	>12870
H11	12870	12870	–	252	–
H15	–	–	–	70	20
H7/F24	–	–	–	–	70
M	12870	12870	12870	70	–
P	–	–	–	70	–
Q, R	12870	12870	12870	70	–
CD128, RD128, E160, TE160	12870	12870	12870	70	–

[1] Male connectors and inverse female connectors require coding bar "M"

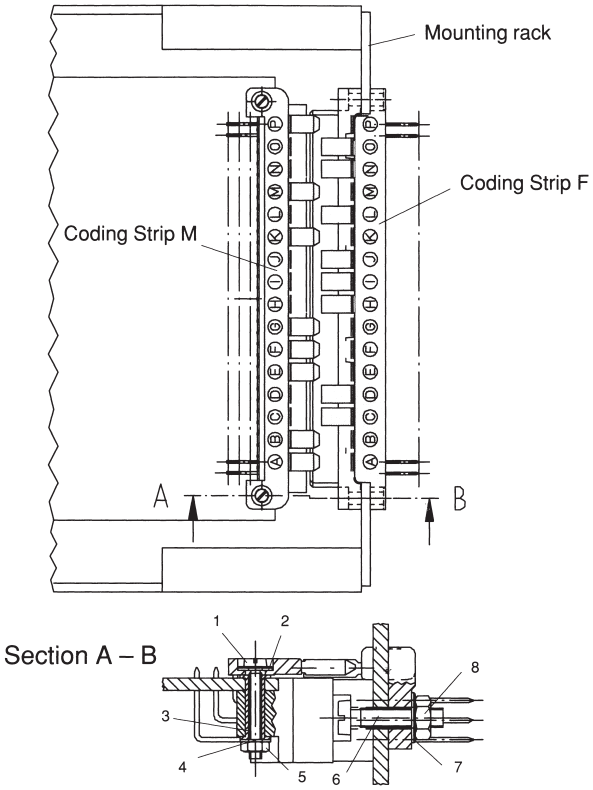

Coding Strips
Coding Strip style F

Female connectors B, C, D, E, H11, M, CD128, E160
Inverse Male connectors Q, R, RD128, TE160

For use with female connectors or inverse male connectors as per DIN 41612 in a 19" rack mounting scheme.

Coding Strip F mounted in a 19" sub-rack.

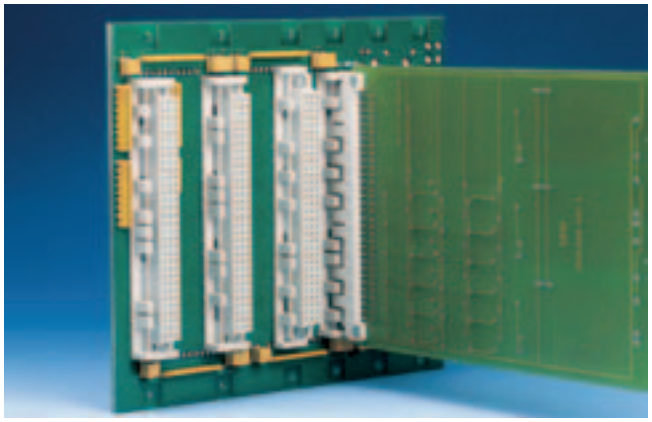

See table on page 197 for reference.

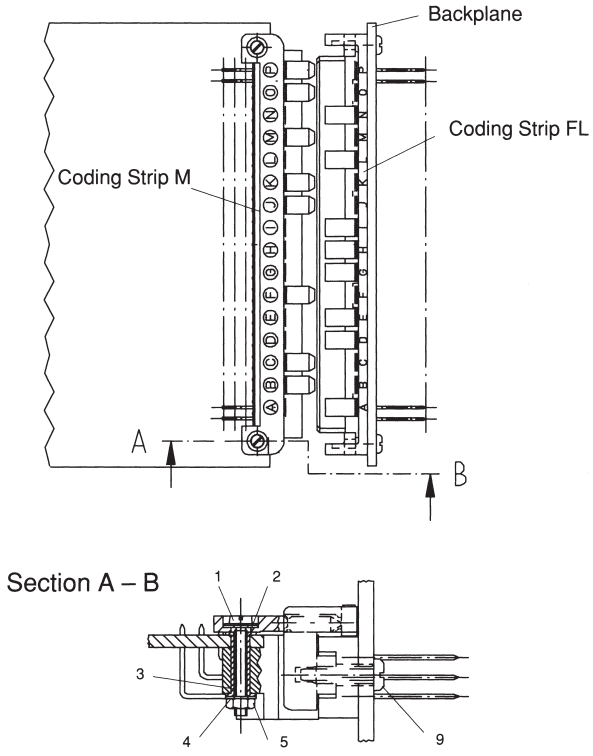

Coding Strip style FL

Female connectors B, C, D, E, H11, M, CD128, E160
Inverse Male connectors Q, R, RD128, TE160

For use with female connectors or inverse male connectors as per DIN 41612 in a backplane mounting scheme.

Coding Strip FL mounted on a backplane.

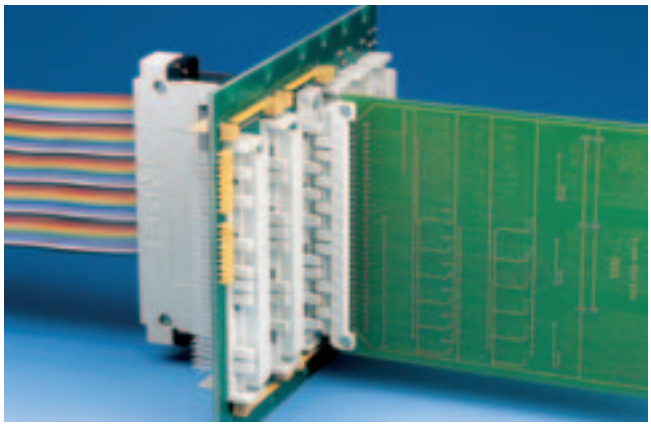

See table on page 197 for reference.

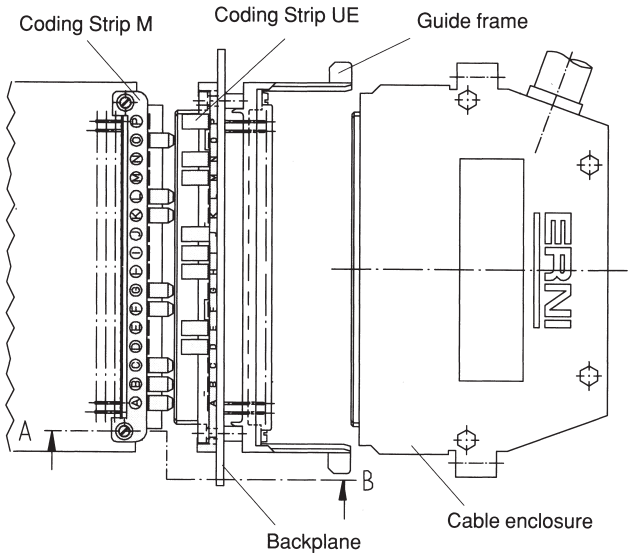

Coding Strip style UE

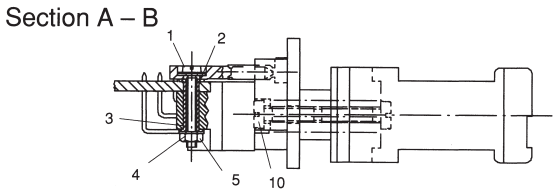

Female connectors B, C, D, E, M, CD128, E160
Inverse Male connectors Q, R, RD128, TE160

For use with female connectors or inverse male connectors as per DIN 41612 in a backplane mounting scheme together with peripheral connections.

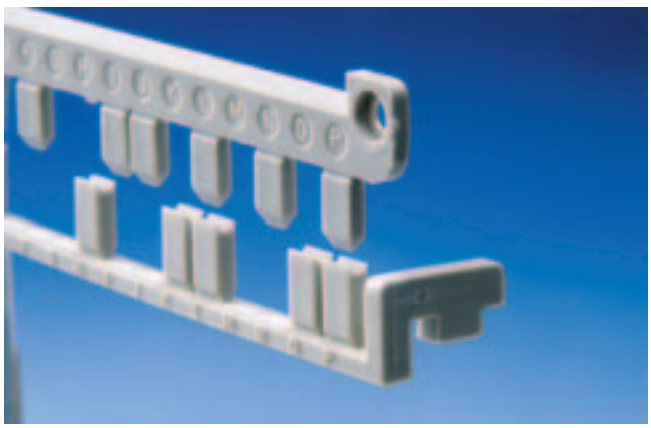

Coding Strip UE mounted on a backplane with a peripheral interface.

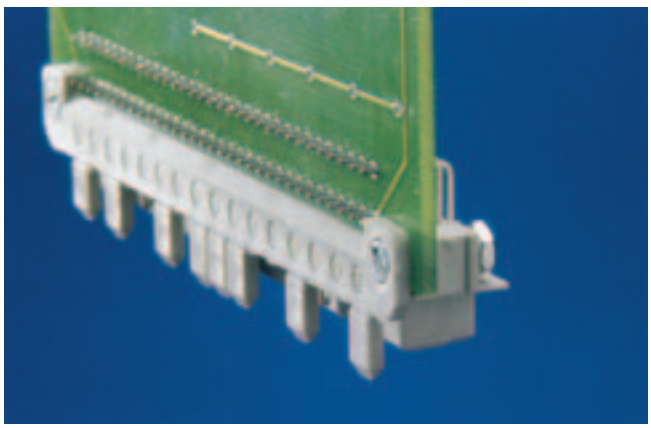

See table on page 197 for reference.

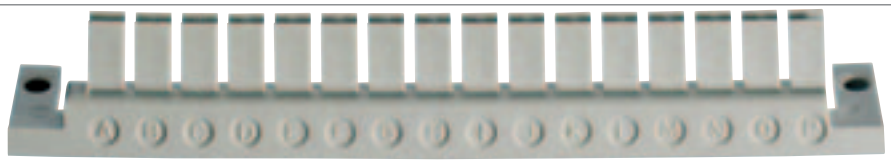

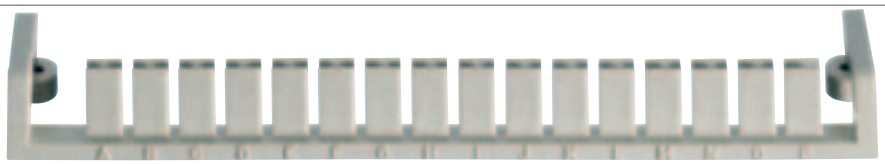

Ruggedized coding tabs on the coding strips can withstand a strain of up to 250 N even when misaligned mating occurs.

When coding the plug-in module, the coding strip M is always used. The M strips' coding tabs are identified with the letters A, B, C, . . . , P.

Ordering Instructions for Coding Strips

Description	Material	Remarks	Part Number
			
Coding Strips M Male connectors B, C, D, E, H11, M, CD128, E160 Inverse Female connectors Q, R, RD128, TE160	PBTP 30% GF	Coding Strips M should be mounted after soldering.	**083502**
			
Coding Strips F Female connectors B, C, D, E, H11, M, CD128, E160 Inverse Male connectors Q, R, RD128, TE160	PBTP 30% GF	The Coding Strips must be screwed or riveted together with the connector; no additional drill holes are needed.	**083504**
			
Coding Strips FL Female connectors B, C, D, E, H11, M, CD128, E160 Inverse Male connectors Q, R, RD128, TE160	PBTP 30% GF	The Coding Strips must be screwed or riveted together with the connector; no additional drill holes are needed.	**083506**
			
Coding Strips UE Female connectors B, C, D, E, M, CD128, E160 Inverse Male connectors Q, R, RD128, TE160	PBTP 30% GF	The Coding Strips must be screwed or riveted together with the connector; no additional drill holes are needed.	**414705**

Mounting Hardware for Coding Strips *(not included with coding strips)*

Pos [1]	Description	Size	Pos [1]	Description	Size
1	Fillster head screw	M 1.6x12 DIN 84	6	Fillster head srew	M 2.5x12 DIN 84
2	Washer	A 1.8 DIN 125	7	Washer	2.7 DIN 125
3	Rivet		8	Hexagonal nut	M 2.5 DIN 934
4	Spring washer	A 1.7 DIN 137	9	Sheet metal srew	B 2.2x9.5 DIN 84
5	Hexagonal nut	M 1.6 DIN 934	10	Fillster head sheed	M 2.5x10 DIN 84

[1] Position numbers are from sketches on pages 195 and 196.

Coding Taps

Female connectors B/3, C/3, B/2, C/2, B, C, D, H11, H15, M, CD128, E160
Inverse Female connectors Q/3, R/3, Q/2, R/2, P, Q, R, RD128, TE160

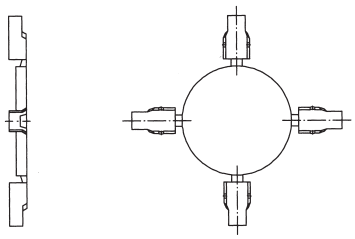

The coding tabs are inserted into existing slots on the female connector. By using coding pliers, the corresponding pre-notched area an the male connector is recessed.
The number of coding tab locations available depends on the size and style of the connector.
To maintain connector stability, the maximum recommended number of coding possibilities is based on using only 1/2 the total available coding slots.
Thus the specific number of coding possibilities is shown in the table an page 194.
This coding system is supplied in a star-shaped assembly with 4 coding tabs.

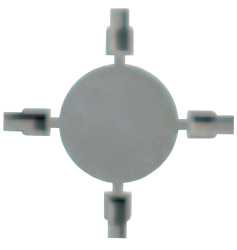

Ordering Instructions

4 Coding tab assembly:

Fernale connectors
B/3, C/3, B/2, C/2, B, C, D, M, CD128, E160
Inverse Fernale connectors
Q/3, R/3, Q/2, R/2, P, Q, R, RD128, TE160

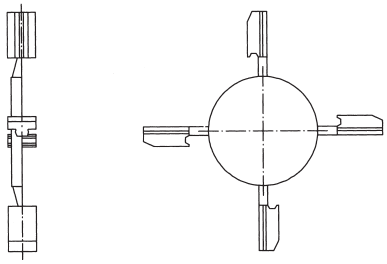

Part number: **033014**

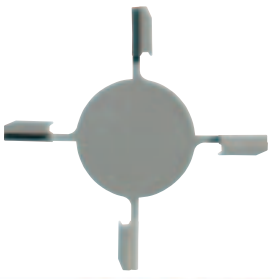

4 Coding tab assembly:

Fernale connectors
H11, H15

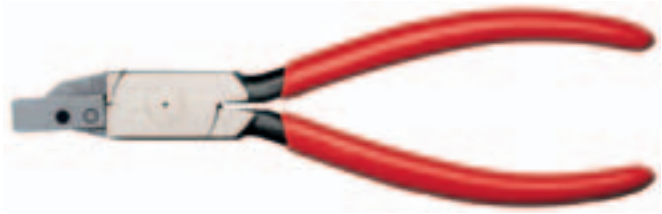

Part number: **434878**

Coding pliers

For removing the coding position on the male connector

Part number: **473270**

Coding Pins

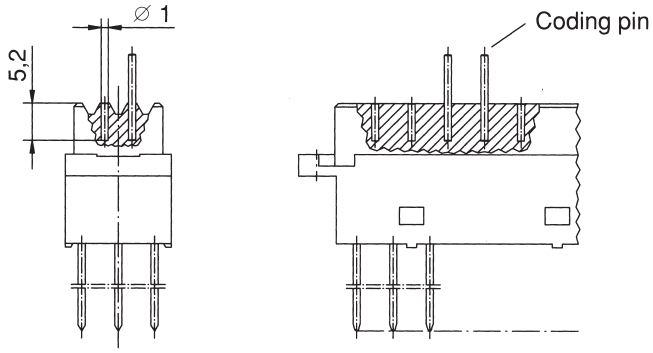

Female connectors D, E, F, H15, H7/F24

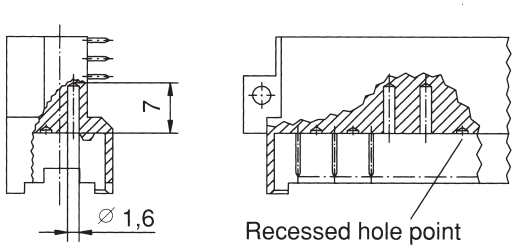

The coding pins are inserted with an insertion tool into predrilled holes located between the contact rows on the female connector. Corresponding holes must then be drilled on the male connector.
Recessed hole points on the male connector provides alignment for drilling the corresponding holes.

Coding Instructions

Fernale connector

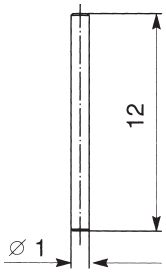

Male connector

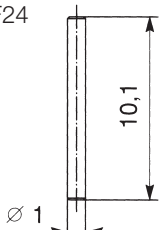

Suitable for Type D,E,F

Part number: **033007**

Suitable for Type H15,H7/F24

Part number: **424338**

Coding Tool

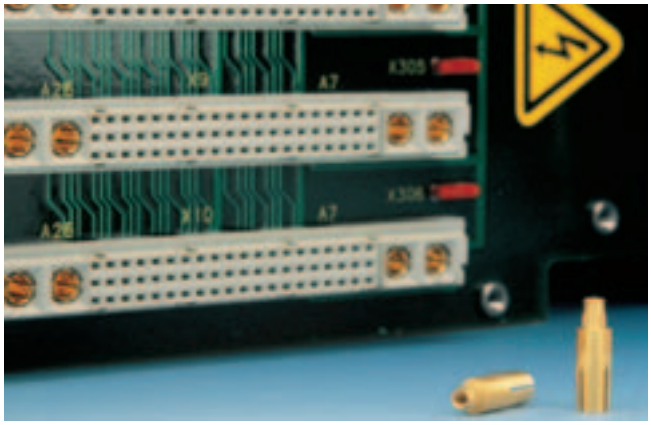

For inserting coding pins into the predrilled holes on the female connector.

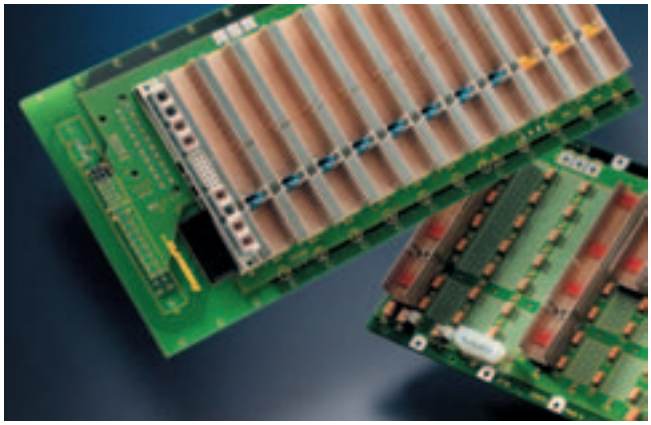

Part number: **063007**

Общество с ограниченной ответственностью «МосЧип» ИНН 7719860671 / КПП 771901001
Адрес: 105318, г.Москва, ул.Щербаковская д.3, офис 1107

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
