

GT16 Series

— Subminiature Connectors for coaxial cables —

<Several types and configurations: In-line, board mounted.
Multi-position and color/ keying variations.>

Features

- **Space-saving Design**
Compact and light weight comparing with HRS GT5 series.
- **Excellent High Frequency Performance**
Refer to V.S.W.R. data on the following pages.

Applications

In-car communication, car sensors(temperature, pressure), automotive audio systems, GPS antenna systems, RACS antenna audio/video antenna systems, CRT displays, medical and measuring instrumentation LAN systems.

◆GT16G Wiring Method

1. Pass the cable through the outside tube.

2. Strip the cable.

3. Crimp the center terminal.

4. Insert the crimped terminal into the Insulator.

5. Insert the Insulator into the outside tube.

6. Crimp the outside tube.

7. Insert the terminal into the housing.

GT16G Wiring Method

①Strip the cable.

Note 1. See "Crimping Quality Standards Manual" for information about the end processing dimensions.

Note 2. Before performing end processing, arrange cable ends to be perpendicular. (There shall be no cable crushing.)

Note 3. Care must be taken so as not to damage the various cut portions of the center conductor, dielectric, and outer conductor.

②Crimp the center terminal with the special jig.

Note 1. See "Crimping Conditions Table" for information about the crimp height.

Note 2. See "Crimping Quality Standards Manual" for information about crimping standards.

③Place the outside tube over the cable.

Note 1. Pay attention to the placement direction of the outside tube.

④Widen the external conductor with the special tool, place the outer ferrule, and return the external conductor over the outer ferrule.

Note 1. Spread only the outer conductor without unravelling. Copper foil or aluminum foil shall not be spread, but shall be on the inside of the outer ferrule.

Note 2. The orientation of the outer ferrule shall be as indicated in the diagram. Align the slit of the outer ferrule with the protruding portion of the crimp terminal and insert.

Note 3. The outer ferrule shall be placed so that the portion of different level is inserted as far as the sheath end.

Note 4. Pay attention to pinching of the external conductor (i.e., biting into the sheath) during the placement.

- ⑤ Using the special jig, insert the terminal ferrule from the coupling side of the crimp terminal until it reaches the end.
 Note 1. Orient the terminal ferrule as illustrated in the diagram, align the slit portion of the terminal ferrule with the protruding portion of the crimp terminal, and then insert.

- ⑥ Set the aforementioned terminal block onto the insulator and enclose it from the top with one more insulator.
 Note 1. Set the protruding portion of the crimp terminal in the groove hole of the insulator.
 Note 2. Pull the cable with a force on the order of 4.9 N and check that the terminal block does not come out.

- ⑦ Use the special tool to cover the insulator with the outside tube, which was previously inserted.
 Note 1. Orient the outside tube as illustrated in the diagram, align the punched-in portion of the outside tube with the groove portion of the insulator (so that at both left and right, the split of the outer ferrule is aligned with the barrel bottom portion of the outside tube), and then insert.
 Note 2. Insert until the insulator stops at the lance of the outside tube.

⑧ Use the special jig to crimp the crimp terminal.

Note 1. See "Crimping Conditions Table" for information about the crimping height.

Note 2. See "Crimping Quality Standards Manual" for information about crimping standards.

⑨ Insert the aforementioned outside tube block into the housing.

Note 1. Align the protruding portion of the outside tube with the groove portion of the housing, and then insert.

Note 2. Insert until the outside tube stops at the lance of the housing.

⑩ Insert the retainer into the housing.

Note 1. Insert until the retainer stops at the housing.

⑪ Inspect and complete the wiring.

Note: The length (L) dimension after wiring and the cut cable length are described below.

Cut cable length: $L1 - 8.1$

$L2 + 11.0$

Process 10	Inspection	High frequency characteristics test (Complete) Continuity / Withstand voltage test Inspection of external appearance	High frequency characteristics test (Complete) Continuity / Withstand voltage test Inspection of external appearance	High frequency characteristics test (Complete) Continuity / Withstand voltage test Inspection of external appearance

◆ Test Data (Using 1.5D-2W Type cable)

Note: Typical data using fully assembled and connected GT16-1P-H and the GT16-1S-HU.

Note: The measurement data shown above were obtained using the GT16G-1P-H and GT16G-1S-HU.

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
