

# Surface Mount PTC

## 0ZCN Series

**HF** **Pb** 0ZCN Series -2016 Chip

RoHS 2 Compliant & Halogen-Free

### Application

All high-density boards

### Product Features

2016 Dimension, Surface mountable, Solid state, Faster time to trip than standard SMD devices.

### Operating (Hold Current) Range

300mA - 2A

### Maximum Voltage

6 - 60V (per table)

### Temperature Range

-40°C to 85°C

### Agency Approval

TUV (Std. EN60738-1-1, Cert. R50102117)

UL Component (Std. UL1434, File E305051)

UL Conditions of Acceptability:

1. These devices have been investigated for use in safety circuits and are suitable as a limiting device.
2. These devices have been calibrated to limit the current to 8 amps within 5 seconds, per ANSI/NFPA 70, "National Electrical Code".

LEAD FREE = **Pb**

HALOGEN FREE = **HF**

### Electrical Characteristics (23°C)

	Part Number	Hold Current	Trip Current	Rated Voltage	Maximum Current	Typical Power	Max Time to Trip		Resistance Tolerance		Agency Approvals	
		IH, A	IT, A	Vmax, Vdc	I <sub>max</sub> , A	Pd, W	Current	Time	Rmin	R1max	<b>UL</b> <b>US</b>	<b>TUV</b>

	0ZCN0110AF2C	1.10	2.20	33	100	1.4	8.0	0.5	0.100	0.400	Y	Y
E	0ZCN0150FF2C	1.50	3.00	15	100	1.4	8.0	0.8	0.070	0.180	Y	Y
F	0ZCN0200FF2C	2.00	4.20	6	100	1.4	8.0	3.0	0.048	0.100	Y	Y

IH Hold Current-maximum current at which the device will not trip in still air at 23°C.

IT Trip current-minimum current at which the device will always trip in still air at 23°C.

I<sub>max</sub> Maximum fault current device can withstand without damage at rated voltage (Vmax).

Vmax Maximum voltage device can withstand without damage at its rated current.

Pd Typical power dissipated by device when in tripped state in 23°C still air environment.

Rmin Minimum device resistance at 23°C.

R1max Maximum device resistance at 23°C, 1 hour after initial device trip, or after being soldered to PCB in end application.

# Surface Mount PTC

## 0ZCN Series

HF Pb 0ZCN Series -2016 Chip

RoHS 2 Compliant & Halogen-Free

### PTC's – Basic Theory of Operation / "Tripped" Resistance Explanation

Fundamentally, a Bel PTC consists of a block of polymeric material containing conductive filler and bonded between two conductive, planar terminations.

At currents below the device I<sub>HOLD</sub> rating, AND at temperatures below 100C, the PTC maintains a resistance value below its R<sub>1</sub> MAX rating.

As the device's temperature approaches 130C, either due to an increase in ambient temperature or a current exceeding its I<sub>TRIP</sub> rating, volumetric expansion of the filled polymer breaks apart the majority of conductive pathways across the terminals created by chain contact of adjacent filler particles or device resistance increases sharply by several orders of magnitude.

At the much higher "Tripped" resistance, there is just enough leakage current to allow internal heating to "hold" the device in its tripped state (around 125C) until power is interrupted. Once power is removed, the PTC's core cools and contracts allowing conductive chains to reform and return the device to its low resistance state.

The catalog data for each device specifies a "Typical Power" value. This is the power required to exactly match the heat lost by the tripped device to its ambient surroundings at 23C. By Ohm's Law, power can be stated as:  $W = E^2/R$ . Thus the approximate resistance of a "Tripped" PTC can be determined by:  $R = E^2/W$ , where "E" is the voltage appearing across the PTC (usually the supply's open circuit voltage), and "W" is the Typical Power value for the particular PTC. Since the PPTC acts to maintain a constant internal temperature, its apparent resistance will change based upon applied voltage and, to a lesser degree, ambient conditions. Consider the following example....

A PTC with a Typical Power of 1 watt protecting a circuit using a 60V supply will demonstrate an apparent, tripped resistance "R" of:

$$R = 60^2/1 = 3,600 \text{ ohms}$$

This same tripped device when used to protect a 12V circuit would now present an apparent resistance of:

$$R = 12^2/1 = 144 \text{ ohms}$$

The value for Typical Power is "typical" because any physical factors that affect heat loss (such as ambient temperature or air convection) will somewhat alter the level of power that the PTC needs to maintain its internal temperature. In short, PTCs do not exhibit a constant, quantifiable tripped resistance value.

## 0ZCN Series

HF Pb 0ZCN Series -2016 Chip

RoHS 2 Compliant & Halogen-Free

### Pad Layout

The dimensions in the table below provide the recommended pad layout.

### Termination Pad Materials

Pure Tin - Plated Copper

P		S		W	
Nominal		Nominal		Nominal	
mm	Inch	mm	Inch	mm	Inch
3.40	0.133	1.50	0.059	4.60	0.181

### Mechanical Dimensions and Marking

All dimensions in mm.

Part Number	Dimensions		Marking Code	
	C		"b", IH code.	
	Min	Max		
0ZCN0030FF2C	0.40	1.15	0030	
0ZCN0055FF2A	0.40	1.70	0055	
0ZCN0075FF2A	0.40	1.70	0075	
0ZCN0110FF2C	0.30	0.70	0110	
0ZCN0110AF2C	0.30	0.70		110 33
0ZCN0150FF2C	0.25	0.65	0150	
0ZCN0200FF2C	0.25	0.55	0200	

### Thermal Derating Curve

### Cautionary Notes

1. Operation beyond the specified maximum ratings or improper use may result in damage and possible electrical arcing and/or flame.
2. These Polymer PTC (PPTC) devices are intended for protection against occasional overcurrent/ overtemperature fault conditions and may not be suitable for use in applications where repeated and/or prolonged fault conditions are anticipated.
3. Avoid contact of PTC device with chemical solvent. Prolonged contact may adversely impact the PTC performance.
4. These PTC devices may not be suitable for use in circuits with a large inductance, as the PTC trip can generate circuit voltage spikes above the PTC rated voltage.
5. These devices are intended for use in DC voltage applications only. Use in AC voltage applications should be first discussed with Bel Fuse engineering.
6. Not recommended for use on potted or conformal coated PCB's. Restriction of free air flow could affect electrical performance and/or result in device failure. Consult Bel Fuse engineering.
7. In the "Indeterminate Performance / grey zone", tripping may occur but cannot be relied upon. For special circumstances considering use within this region, consult Bel Fuse Engineering.
8. MSL : 2a (According to IPC J-Std-020).

# Surface Mount PTC

## 0ZCN Series

HF Pb 0ZCN Series -2016 Chip

RoHS 2 Compliant & Halogen-Free

### Solder Reflow and Rework Recommendations

Profile Feature	Pb-Free Assembly
Average Ramp-Up Rate (T <sub>smax</sub> to T <sub>p</sub> )	3°C/second max
Preheat :	
Temperature Min (T <sub>smin</sub> )	150°C
Temperature Max (T <sub>smax</sub> )	200°C
Time (t <sub>smin</sub> to t <sub>smax</sub> )	60-180 seconds
Time maintained above:	
Temperature(T <sub>L</sub> )	217°C
Time (t <sub>L</sub> )	60-150 seconds
Peak/Classification Temperature(T <sub>p</sub> ) :	260°C
Time within 5°C of actual Peak :	
Temperature (t <sub>p</sub> )	20-40 seconds
Ramp-Down Rate :	6°C/second max.
Time 25°C to Peak Temperature :	8 minutes max

#### Solder Reflow

Due to "lead free / RoHS 6" construction of these PTC devices, the required Temperature and Dwell Time in the "Soldering" zone of the reflow profile are greater than those used for non-RoHS devices.

1. Recommended reflow methods ; IR, vapor phase oven, hot air oven.
2. Not Recommended For Wave Solder / Direct Immersion.
3. Recommended paste thickness range – 0.20 – 0.25mm.
4. Devices are compatible with standard industry cleaning solvents and methods.
5. MSL : 2a (According to IPC J-Std-020).

#### Caution

If reflow temperature / dwell times exceed the recommended profile, the electrical performance of the PTC may be affected.

Rework : MIL-STD-202G Method 210F, Test Condition A.

### Standard Packaging

Part Number	Tape/Reel Qty	2000 or 1000 fuses in 7 inches dia. Reel, 8mm wide tape, 4mm pitch, per EIA-481(equivalent IEC-286 part 3).
0ZCN0030FF2C	2,000	
0ZCN0055FF2A	1,000	
0ZCN0075FF2A	1,000	
0ZCN0110FF2C		
Thru	2,000	
0ZCN0200FF2C

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
