S-8355/56/57/58 Series

STEP-UP, SUPER-SMALL PACKAGE, 600 kHz, PWM CONTROL or PWM/PFM SWITCHABLE SWITCHING REGULATOR CONTROLLER

www.sii-ic.com

© Seiko Instruments Inc., 2002-2010

Rev.7.0_00

The S-8355/56/57/58 Series is a CMOS step-up switching regulator controller which mainly consists of a reference voltage source, an oscillation circuit, an error amplifier, a phase compensation circuit, a PWM control circuit (S-8355/57 Series) and a PWM/PFM switching control circuit (S-8356/58 Series).
With an external low-ON-resistance Nch Power MOS, this product is ideal for applications requiring high efficiency and a high output current.
The S-8355/57 Series realizes low ripple, high efficiency, and excellent transient characteristics due to its PWM control circuit whose duty ratio can be varied linearly from 0 to 83% (from 0 to 78% for 250 kHz, 300 kHz, and 600 kHz models), an excellently designed error amplifier and a phase compensation circuits.
S-8356/58 Series features a PWM/PFM switching controller that can switch the operation to a PFM controller with a duty ratio is 15% under a light load to prevent a decline in the efficiency due to the IC operating current.

■ Features

- Low voltage operation : Startup at 0.9 V min. (I_{OUT} = 1 mA) guaranteed
- Low current consumption : During operation 25.9 μA (3.3 V, 100 kHz, typ.)
  During shutdown 0.5 μA (max.)
- Duty ratio : Built-in PWM/PFM switching control circuit (S-8356/58 Series)
  15 to 83% (100 kHz models)
  15 to 78% (250 kHz, 300 kHz, and 600 kHz models)
- External parts : Coil, diode, capacitor, and transistor
- Output voltage : Selectable in 0.1 V steps between 1.5 and 6.5 V (for V_{DD} / V_{OUT} separate types)
  Selectable in 0.1 V steps between 2.0 and 6.5 V (for other than V_{DD} / V_{OUT} separate types)
- Output voltage accuracy : ±2.4%
- Oscillation frequency : 100 kHz, 250 kHz, 300 kHz, 600 kHz selectable

- Soft start function : 6 ms (100 kHz, typ.)
- Shutdown function
- Lead-free, Sn 100%, halogen-free[*1]

***1.** Refer to "■ **Product Name Structure**" for details.

■ Applications

- Power supplies for portable equipment such as digital cameras, electronic notebooks, and PDAs
- Power supplies for audio equipment such as portable CD / MD players
- Constant voltage power supplies for cameras, VCRs, and communications devices
- Power supplies for microcomputers

■ Packages

- SOT-23-3
- SOT-23-5
- SOT-89-3
- 6-Pin SNB(B)

■ Block Diagrams

(1) S-8357/58 Series B, H and F Types (Without Shutdown Function)

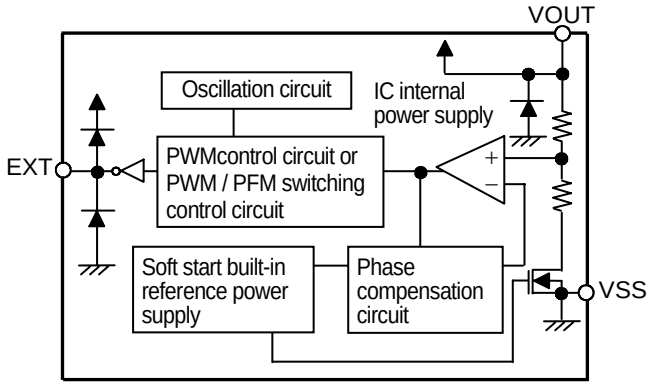

Figure 1

(2) S-8357/58 Series B, H, F and N Types (With Shutdown Function)

■ Product Name Structure

The control system, product types, output voltage, and packages for the S-8355/56/57/58 Series can be selected at the user's request. Please refer to the "**3. Product Name**" for the definition of the product name, "**4. Package**" regarding the package drawings and "**5. Product Name List**" for the full product names.

1. Function List

(1) PWM Control Products

Table 1

Product Name	Switching Frequency kHz	Shutdown Function	V_{DD} / V_{OUT} Separate Type	Package	Application
S-8355KxxMC	100	Yes	Yes	SOT-23-5	Applications requiring variable output voltage and a shutdown function
S-8355LxxMC, S-8355LxxBD	250	Yes	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage, a shutdown function, and a thin coil
S-8355MxxMC, S-8355MxxBD	300	Yes	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage, a shutdown function, and a thin coil
S-8355QxxMC, S-8355QxxBD	600	Yes	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage, a shutdown function, and a thin coil
S-8357BxxMC	100	Yes	–	SOT-23-5	Applications requiring a shutdown function
S-8357BxxMA	100	–	–	SOT-23-3	Applications not requiring a shutdown function
S-8357BxxUA	100	–	–	SOT-89-3	Applications not requiring a shutdown function
S-8357ExxMC	100	–	Yes	SOT-23-5	Applications in which output voltage is adjusted by external resistor
S-8357FxxMC, S-8357FxxBD	300	Yes	–	SOT-23-5, 6-Pin SNB(B)	Applications requiring a shutdown function and a thin coil
S-8357GxxMC, S-8357GxxBD	300	–	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage and a thin coil
S-8357HxxMC, S-8357HxxBD	250	Yes	–	SOT-23-5, 6-Pin SNB(B)	Applications requiring a shutdown function and a thin coil
S-8357JxxMC, S-8357JxxBD	250	–	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage with an external resistor and a thin coil
S-8357NxxMC, S-8357NxxBD	600	Yes	–	SOT-23-5, 6-Pin SNB(B)	Applications requiring a shutdown function and a thin coil
S-8357PxxMC, S-8357PxxBD	600	–	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage with an external resistor and a thin coil

(2) PWM / PFM Switching Control Products

Table 2

Product Name	Switching Frequency kHz	Shutdown Function	V_{DD} / V_{OUT} Separate Type	Package	Application
S-8356KxxMC	100	Yes	Yes	SOT-23-5	Applications requiring variable output voltage and a shutdown function
S-8356LxxMC, S-8356LxxBD	250	Yes	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage, a shutdown function, and a thin coil
S-8356MxxMC, S-8356MxxBD	300	Yes	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage, a shutdown function, and a thin coil
S-8356QxxMC, S-8356QxxBD	600	Yes	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage, a shutdown function, and a thin coil
S-8358BxxMC	100	Yes	–	SOT-23-5	Applications requiring a shutdown function
S-8358BxxMA	100	–	–	SOT-23-3	Applications not requiring a shutdown function
S-8358BxxUA	100	–	–	SOT-89-3	Applications not requiring a shutdown function
S-8358ExxMC	100	–	Yes	SOT-23-5	Applications in which output voltage is adjusted by external resistor
S-8358FxxMC, S-8358FxxBD	300	Yes	–	SOT-23-5, 6-Pin SNB(B)	Applications requiring a shutdown function and a thin coil
S-8358GxxMC, S-8358GxxBD	300	–	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage and a thin coil
S-8358HxxMC, S-8358HxxBD	250	Yes	–	SOT-23-5, 6-Pin SNB(B)	Applications requiring a shutdown function and a thin coil
S-8358JxxMC, S-8358JxxBD	250	–	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage with an external resistor and a thin coil
S-8358NxxMC, S-8358NxxBD	600	Yes	–	SOT-23-5, 6-Pin SNB(B)	Applications requiring a shutdown function and a thin coil
S-8358PxxMC, S-8358PxxBD	600	–	Yes	SOT-23-5, 6-Pin SNB(B)	Applications requiring variable output voltage with an external resistor and a thin coil

2. Package and Function List by Product Type

Table 3

Series Name	Type	Package Name (Abbreviation)	Shutdown Function Yes / No	V_{DD} / V_{OUT} Separate Type Yes / No
S-8355 Series, S-8356 Series	K, L, M, Q (Shutdown function + V_{DD} / V_{OUT} separate type) K = 100 kHz, L = 250 kHz, M = 300 kHz, Q = 600 kHz	MC / BD	Yes	Yes
S-8357 Series	B, H, F (Normal product) B = 100 kHz, H = 250 kHz, F = 300 kHz	MA / UA	No	No
		MC / BD	Yes	
	N (Normal product) N = 600 kHz	MC / BD	Yes	No
	E, J, G, P (V_{DD} / V_{OUT} separate type) E = 100 kHz, J = 250 kHz, G = 300 kHz, P = 600 kHz	MC / BD	No	Yes
S-8358 Series	B, H, F (Normal product) B = 100 kHz, H = 250 kHz, F = 300 kHz	MA / UA	No	No
		MC / BD	Yes	
	N (Normal product) N = 600 kHz	MC/BD	Yes	No
	E, J, G, P (V_{DD} / V_{OUT} separate type) E = 100 kHz, J = 250 kHz, G = 300 kHz, P = 600 kHz	MC / BD	No	Yes

■ Absolute Maximum Ratings

Table 22

(Ta = 25°C unless otherwise specified)

Item		Symbol	Absolute maximum rating	Unit
VOUT pin voltage		V_{OUT}	V_{SS} − 0.3 to V_{SS} + 12	V
ON / $\overline{\text{OFF}}$ pin voltage *1		$V_{ON/\overline{OFF}}$	V_{SS} − 0.3 to V_{SS} + 12	V
VDD pin voltage *2		V_{DD}	V_{SS} − 0.3 to V_{SS} + 12	V
EXT pin voltage	B, H, F, N type	V_{EXT}	V_{SS} − 0.3 to V_{OUT} + 0.3	V
	Others		V_{SS} − 0.3 to V_{DD} + 0.3	V
EXT pin current		I_{EXT}	±80	mA
Power dissipation	SOT-23-3	P_D	150 (When not mounted on board)	mW
			430*3	mW
	SOT-23-5		250 (When not mounted on board)	mW
			600*3	mW
	SOT-89-3		500 (When not mounted on board)	mW
			1000*3	mW
	6-Pin SNB(B)		90 (When not mounted on board)	mW
			450*3	mW
Operating ambient temperature		T_{opr}	− 40 to + 85	°C
Storage temperature		T_{stg}	− 40 to + 125	°C

***1.** With shutdown function

***2.** For V_{DD} / V_{OUT} separate type

***3.** When mounted on board

[Mounted board]

(1) Board size : 114.3 mm × 76.2 mm × t1.6 mm

(2) Name : JEDEC STANDARD51-7

Caution The absolute maximum ratings are rated values exceeding which the product could suffer physical damage. These values must therefore not be exceeded under any conditions.

Efficiency	EFFI	–	–	85	–	%	2

External parts

Coil: CDRH6D28-470 of Sumida Corporation
Diode: RB461F (Schottky type) of Rohm Co., Ltd.
Capacitor: F93 (16 V, 47 μF tantalum type) of Nichicon Corporation
Transistor: CPH3210 of Sanyo Electric Co., Ltd.
Base resistor (R_b): 1.0 kΩ
Base capacitor (C_b): 2200 pF (ceramic type)

$V_{IN} = V_{OUT(S)} \times 0.6$ applied, $I_{OUT} = V_{OUT(S)} / 50\ \Omega$

With shutdown function : ON / $\overline{\text{OFF}}$ pin is connected to V_{OUT}

For V_{DD} / V_{OUT} separate type : VDD pin is connected to VOUT pin

Remark **1.** $V_{OUT(S)}$ specified above is the set output voltage value, and V_{OUT} is the typical value of the actual output voltage.

2. V_{DD} / V_{OUT} separate type

A step-up operation is performed from V_{DD} = 0.8 V. However, 1.8 V ≤ V_{DD} ≤ 10 V is recommended stabilizing the output voltage and oscillation frequency. (V_{DD} ≥ 1.8 V must be applied for products with a set value of less than 1.9 V.)

(2) 250 kHz Product (H, J and L Types)

Table 24

(Ta = 25°C unless otherwise specified)

Item	Symbol	Condition		Min.	Typ.	Max.	Unit	Measurement circuit

■ Operation

1. Switching Control Types

1.1 PWM Control (S-8355/57 Series)

The S-8355/57 Series is a DC-DC converter using a pulse width modulation method (PWM) and features a low current consumption.
In conventional PFM DC-DC converters, pulses are skipped when the output load current is low, causing a fluctuation in the ripple frequency of the output voltage, resulting in an increase in the ripple voltage. The switching frequency does not change, although the pulse width changes from 0 to 83% (78% for F, G, H, J, L, M, N, P and Q types) corresponding to each load current. The ripple voltage generated from switching can thus be removed easily through a filter because the switching frequency is constant.

1.2 PWM/PFM Switching Control (S-8356/58 Series)

S-8356/58 Series is a DC-DC converter that automatically switches between a pulse width modulation method (PWM) and a pulse frequency modulation method (PFM), depending on the load current, and features low current consumption.
The S-8356/58 Series operates under PWM control with the pulse width duty changing from 15 to 83% (78% for F, G, H, J, L, M, N, P and Q types) in a high output load current area.
The S-8356/58 Series operates under PFM control with the pulse width duty fixed at 15%, and pulses are skipped according to the load current. The oscillation circuit thus oscillates intermittently so that the resultant lower self current consumption prevents a reduction in the efficiency at a low load current. The switching point from PWM control to PFM control depends on the external devices (coil, diode, etc.), input voltage and output voltage. This series are an especially highly efficient DC-DC converter at an output current around 100 μA.

2. Soft Start Function

For this IC, the built-in soft start circuit controls the rush current and overshoot of the output voltage when powering on or when the ON / $\overline{\text{OFF}}$ pin is switched to the “H” level.

3. ON/$\overline{\text{OFF}}$ Pin (Shutdown Pin) (SOT-23-5 Package Products of S-8355/56/57/58 Series B, H, F, K, L, M, N and Q Types, and 6-Pin SNB(B) Package Products)

ON / $\overline{\text{OFF}}$ pin stops or starts step-up operation.

Setting the ON / $\overline{\text{OFF}}$ pin to the "L" level stops operation of all the internal circuits and reduces the current consumption significantly.

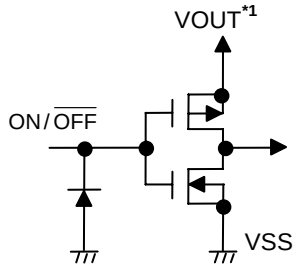
DO NOT use the ON / $\overline{\text{OFF}}$ pin in a floating state because it has the structure shown in **Figure 14** and is not pulled up or pulled down internally. DO NOT apply a voltage of between 0.3 V and 0.75 V to the ON / $\overline{\text{OFF}}$ pin because applying such a voltage increases the current consumption. If the ON / $\overline{\text{OFF}}$ pin is not used, connect it to the VOUT pin.

The ON / $\overline{\text{OFF}}$ pin does not have hysteresis.

Table 28

ON / $\overline{\text{OFF}}$ pin	CR oscillation circuit	Output voltage
"H"	Operation	Fixed
"L"	Stop	$\cong V_{IN}$ *1

***1.** Voltage obtained by subtracting the voltage drop due to the DC resistance of the inductor and the diode forward voltage from V_{IN}.



***1.** VDD for K, L, M and Q types.

Figure 14 ON/$\overline{\text{OFF}}$ Pin Structure

4. Operation

The following are the basic equations [(1) through (7)] of the step-up switching regulator. (Refer to **Figure 15**.)

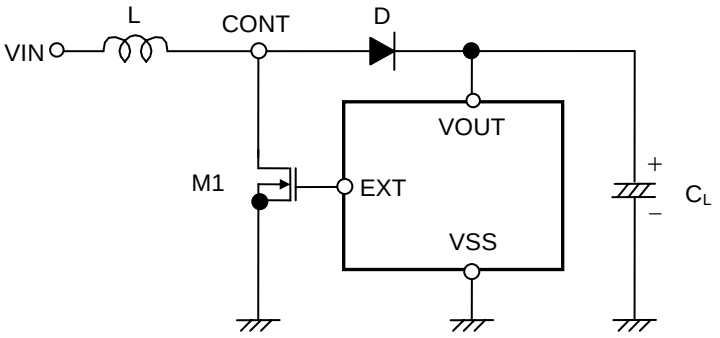


Figure 15 Step-Up Switching Regulator Circuit for Basic Equation

Voltage at CONT pin at the moment M1 is turned ON (V_A) [*1] :

$$V_A = V_S \text{ [*2]} \quad \cdots\cdots (1)$$

***1.** Current flowing through L (I_L) is zero.
***2.** Non-saturated voltage of M1.

The change in I_L over time :

$$\frac{dI_L}{dt} = \frac{V_L}{L} = \frac{V_{IN} - V_S}{L} \quad \cdots\cdots (2)$$

Integration of equation (2) (I_L) :

$$I_L = \left(\frac{V_{IN} - V_S}{L} \right) \bullet t \quad \cdots\cdots (3)$$

I_L flows while M1 is ON (t_{ON}). The time of t_{ON} is determined by the oscillation frequency of OSC.
The peak current (I_{PK}) after t_{ON} :

$$I_{PK} = \left(\frac{V_{IN} - V_S}{L} \right) \bullet t_{ON} \quad \cdots\cdots (4)$$

The energy stored in L is represented by $1/2 \bullet L (I_{PK})^2$.
When M1 is turned OFF (t_{OFF}), the energy stored in L is emitted through a diode to the output capacitor. Then, the reverse voltage (V_L) is generated :

$$V_L = (V_{OUT} + V_D \text{ [*1]}) - V_{IN} \quad \cdots\cdots (5)$$

***1.** Diode forward voltage

The voltage at CONT pin rises only by $V_{OUT}+V_D$.
The change in the current (I_L) flowing through the diode into V_{OUT} during t_{OFF} :

$$\frac{dI_L}{dt} = \frac{V_L}{L} = \frac{V_{OUT} + V_D - V_{IN}}{L} \quad \cdots\cdots (6)$$

Integration of the equation (6) is as follows :

$$I_L = I_{PK} - \left(\frac{V_{OUT} + V_D - V_{IN}}{L} \right) \bullet t \quad \cdots\cdots (7)$$

During t_{ON}, the energy is stored in L and is not transmitted to V_{OUT}. When receiving the output current (I_{OUT}) from V_{OUT}, the energy of the capacitor (C_L) is consumed. As a result, the pin voltage of C_L is reduced, and goes to the lowest level after M1 is turned ON (t_{ON}). When M1 is turned OFF, the energy stored in L is transmitted through the diode to C_L, and the voltage of C_L rises rapidly. V_{OUT} is a time function, and therefore indicates the maximum value (ripple voltage (V_{P-P})) when the current flowing through into V_{OUT} and load current (I_{OUT}) match.
Next, the ripple voltage is determined as follows.
I_{OUT} vs. t_1 (time) from when M1 is turned OFF (after t_{ON}) to when V_{OUT} reaches the maximum level :

$$I_{OUT} = I_{PK} - \left(\frac{V_{OUT} + V_D - V_{IN}}{L} \right) \bullet t_1 \quad \cdots\cdots (8)$$

$$\therefore t_1 = (I_{PK} - I_{OUT}) \bullet \left(\frac{L}{V_{OUT} + V_D - V_{IN}} \right) \quad \cdots\cdots (9)$$

When M1 is turned OFF (t_{OFF}), I_L = 0 (when the energy of the inductor is completely transmitted). Based on equation (7) :

$$\left(\frac{L}{V_{OUT} + V_D - V_{IN}} \right) = \frac{t_{OFF}}{I_{PK}} \quad \cdots\cdots (10)$$

When substituting equation (10) for equation (9) :

$$t_1 = t_{OFF} - \left(\frac{I_{OUT}}{I_{PK}} \right) \bullet t_{OFF} \quad \cdots\cdots (11)$$

Electric charge ΔQ_1 which is charged in C_L during t_1 :

$$\Delta Q_1 = \int_0^{t1} I_L dt = I_{PK} \bullet \int_0^{t1} dt - \frac{V_{OUT} + V_D - V_{IN}}{L} \bullet \int_0^{t1} t dt = I_{PK} \bullet t_1 - \frac{V_{OUT} + V_D - V_{IN}}{L} \bullet \frac{1}{2} t_1^{\,2} \quad \cdots\cdots (12)$$

When substituting equation (12) for equation (9) :

$$\Delta Q1 = I_{PK} - \frac{1}{2}(I_{PK} - I_{OUT}) \bullet t_1 = \frac{I_{PK} + I_{OUT}}{2} \bullet t_1 \quad \cdots\cdots (13)$$

A rise in voltage (V_{P-P}) due to ΔQ_1 :

$$V_{P-P} = \frac{\Delta Q_1}{C_L} = \frac{1}{C_L} \bullet \left(\frac{I_{PK} + I_{OUT}}{2} \right) \bullet t_1 \quad \cdots\cdots (14)$$

When taking into consideration I_{OUT} to be consumed during t_1 and the Equivalent Series Resistance (R_{ESR}) of C_L :

$$V_{P-P} = \frac{\Delta Q_1}{C_L} = \frac{1}{C_L} \bullet \left(\frac{I_{PK} + I_{OUT}}{2} \right) \bullet t1 + \left(\frac{I_{PK} + I_{OUT}}{2} \right) \bullet R_{ESR} - \frac{I_{OUT} \bullet t_1}{C_L} \quad \cdots\cdots (15)$$

When substituting equation (11) for equation (15) :

$$V_{P-P} = \frac{(I_{PK} - I_{OUT})^2}{2I_{PK}} \bullet \frac{t_{OFF}}{C_L} + \left(\frac{I_{PK} + I_{OUT}}{2} \right) \bullet R_{ESR} \quad \cdots\cdots (16)$$

Therefore to reduce the ripple voltage, it is important that the capacitor connected to the output pin has a large capacity and a small R_{ESR}.

■ External Parts Selection

The relationship between the major characteristics of the step-up circuit and the characteristics parameters of the external parts are shown in **Figure 16**.

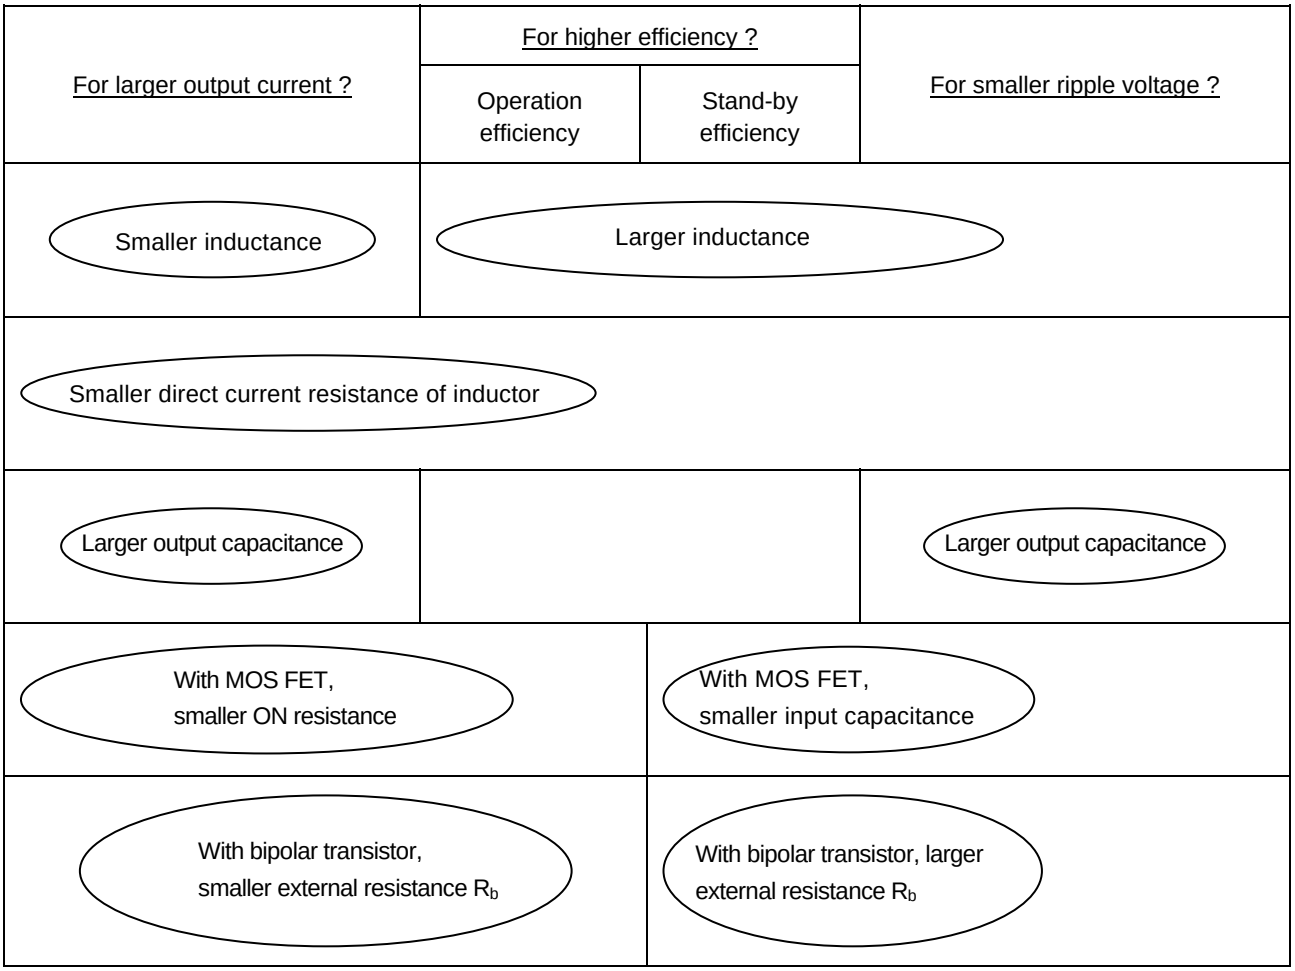

Figure 16 Relationship between Major Characteristics of Step-up Circuit and External Parts

1. Inductor

The inductance value (L value) has a strong influence on the maximum output current (I_{OUT}) and efficiency (η). **Figure 17** shows the relationship between the I_{OUT} and η dependency on L of S-8355/56/57/58 series.

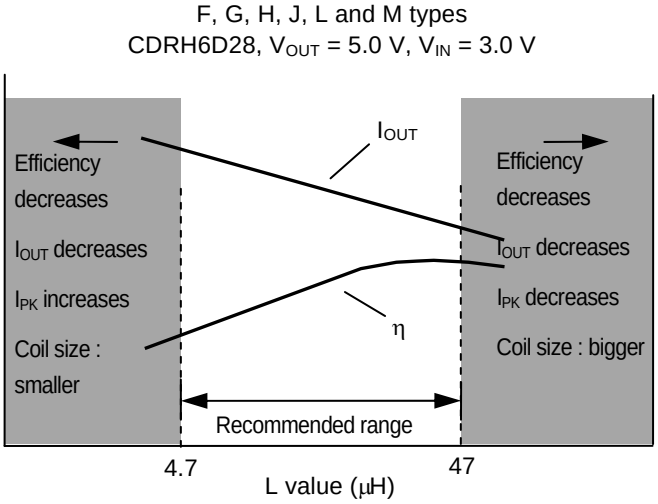

Figure 17 L Value vs. I_{OUT} Characteristics, L Value vs. η Characteristics

The peak current (I_{PK}) increases by decreasing L value and the stability of the circuit improves and I_{OUT} increases. If L value is decreased, the efficiency falls causing a decline in the current drive capacity for the switching transistor, and I_{OUT} decreases.
The loss of I_{PK} by the switching transistor decreases by increasing L value and the efficiency becomes maximum at a certain L value. Further increasing L value decreases the efficiency due to the loss of the direct current resistance of the coil. I_{OUT} also decreases.
A higher oscillation frequency allows selection of a lower L value, making the coil smaller.
The recommended inductances are a 22 to 100 μH for B, E, and K types, a 4.7 to 47 μH for F, G, H, J, L, and M types, 3.0 to 22 μH for N, P and Q types.
Be careful of the allowable inductor current when choosing an inductor. Exceeding the allowable current of the inductor causes magnetic saturation, much lower efficiency and destruction of the IC chip due to a large current.
Choose an inductor so that I_{PK} does not exceed the allowable current. I_{PK} in discontinuous mode is calculated by the following equation:

$$I_{PK} = \sqrt{\frac{2\,I_{OUT}\,(V_{OUT} + V_D - V_{IN})}{f_{OSC} \bullet L}} \text{ (A)} \quad \cdots\cdots (17)$$

f_{osc} = oscillation frequency, $V_D \cong 0.4$ V.

2. Diode

Use an external diode that meets the following requirements :

- Low forward voltage : $V_F < 0.3$ V
- High switching speed : 500 ns max.
- Reverse voltage : $V_{OUT} + V_F$ or more
- Current rate : I_{PK} or more

3. Capacitor (C_{IN}, C_L)

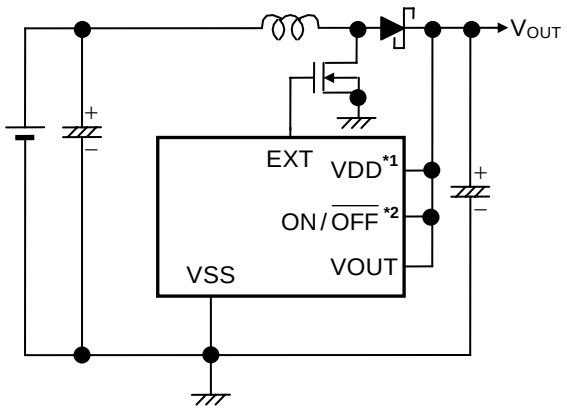
A capacitor on the input side (C_{IN}) improves the efficiency by reducing the power impedance and stabilizing the input current. Select a C_{IN} value according to the impedance of the power supply used.
A capacitor on the output side (C_L) is used for smoothing the output voltage. For step-up types, the output voltage flows intermittently to the load current, so step-up types need a larger capacitance than step-down types. Therefore, select an appropriate capacitor in accordance with the ripple voltage, which increases in case of a higher output voltage or a higher load current. The capacitor value should be 10 μF or more.
Select an appropriate capacitor the equivalent series resistance (R_{ESR}) for stable output voltage. The stable voltage range in this IC depends on the R_{ESR}. Although the inductance value (L value) is also a factor, an R_{ESR} of 30 to 500 mΩ maximizes the characteristics. However, the best R_{ESR} value may depend on the L value, the capacitance, the wiring, and the applications (output load). Therefore, fully evaluate the R_{ESR} under the actual operating conditions to determine the best value.
Refer to the "**3. Example of Ceramic Capacitor Application**" (**Figure 27**) in the "■ **Application Circuit**" for the circuit example using a ceramic capacitor and the external resistance of the capacitor (R_{ESR}).

4. External Transistor

An enhancement (N-channel) MOS FET type or A bipolar (NPN) type can be used as the external transistor.

4.1 Enhancement (N-channel) MOS FET Type

Figure 18 is a circuit example using a MOS FET transistor (N-channel).



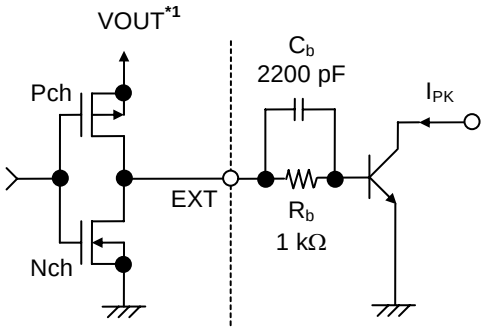
***1.** For V_{DD} / V_{OUT} separate type.
***2.** With shutdown function.

Figure 18 Circuit Example Using MOS FET (N-channel) Type

An N-channel power MOS FET should be used for the MOS FET. Because the gate voltage and current of the external power MOS FET are supplied from the stepped-up output voltage (V_{OUT}), the MOS FET is driven more effectively.
A large current may flow during startup, depending on the MOS FET selection. So perform sufficient evaluation using the actual devices. Also recommend to use a MOS FET with an input capacitance of 700 pF or less.
Since the ON-resistance of the MOS FET might depend on the difference between the output voltage (V_{OUT}) and the threshold voltage of the MOS FET, and affect the output current as well as the efficiency, the threshold voltage should be low. When the output voltage is low, the circuit operates only when the MOS FET has a threshold voltage lower than the output voltage.

4.2 Bipolar (NPN) Type

A circuit example using the CPH3210 (h_{FE} = 200 to 560) from Sanyo Electric Co., Ltd. As a bipolar transistor (NPN) is shown in **Figure 20 to 25** in the "■ **Standard Circuits**". The h_{FE} value and R_b value of the bipolar transistor determine the driving capacity to increase the output current using a bipolar transistor. A peripheral circuit example of the transistor is shown in **Figure 19**.



***1.** V_{DD} for E, G, J, K, L, M, P and Q types.

Figure 19 External Transistor Peripheral Circuit

The recommended R_b value is around 1 kΩ. Actually, calculate the necessary base current (I_b) from the bipolar transistor (h_{FE}) using $I_b = \frac{I_{PK}}{h_{FE}}$, and select the smaller R_b value than $R_b = \frac{V_{OUT} - 0.7}{I_b} - \frac{0.4}{|I_{EXTH}|}$ *1.

A small R_b value can increase the output current, but the efficiency decreases. Since a current may flow on the pulse and the voltage may drop due to wiring resistance or other factors in the actual circuit, therefore the optimum R_b value should be determined by experiment.

Connecting the speed-up capacitor (C_b) in parallel with the R_b resistance as shown in **Figure 19**, decreases switching loss and improves the efficiency.

The C_b value is calculated according to $C_b \leq \frac{1}{2\pi \bullet R_b \bullet f_{osc} \bullet 0.7}$.

Select a C_b value after performing sufficient evaluation since the optimum C_b value differs depending upon the characteristics of the bipolar transistor.

***1.** For E, G, J, K, L, M, P and Q type, $R_b = \frac{V_{DD} - 0.7}{I_b} - \frac{0.4}{|I_{EXTH}|}$.

5. V_{DD} / V_{OUT} Separate Type (For E, G, J, K, L, M, P and Q Types)

The E, G, J, K, L, M, P and Q types provides separate internal circuit power supply (VDD pin) and output voltage setting pin (VOUT pin) in the IC, making it ideal for the following applications.

(1) When changing the output voltage with external resistance.

(2) When outputting a high voltage such as +15 V or +20 V.

Choose the products in the **Table 29** according to the applications (1) or (2) above.

Table 29

Output Voltage (V_{CC})	1.8 V ≤ V_{CC} < 5 V	5 V ≤ V_{CC}	Reference Circuit
S-835xx18	Yes	Yes	Application circuit 1 (Figure **26)**
S-835xx50	–	Yes	Application circuit 1 (Figure **26)**
Connection to VDD pin	V_{IN} or V_{CC}	V_{IN}	–

Cautions 1. This IC starts a step-up operation at V_{DD} = 0.8 V, but set 1.8 ≤ V_{DD} ≤ 10 V to stabilize the output voltage and frequency of the oscillator. (Input a voltage of 1.8 V or more at the VDD pin for all products with a setting less than 1.9 V.) An input voltage of 1.8 V or more at the VDD pin allows connection of the VDD pin to either the input voltage VIN pin or output VOUT pin.

2. Choose external resistors R_A and R_B so as to not affect the output voltage, considering that there is impedance between the VOUT pin and VSS pin in the IC chip. The internal resistance between the VOUT pin and VSS pin is as follows :

(1) S-835xx18 : 2.1 to 14.8 MΩ

(2) S-835xx20 : 1.4 to 14.8 MΩ

(3) S-835xx30 : 1.4 to 14.2 MΩ

(4) S-835xx50 : 1.4 to 12.1 MΩ

3. Attach a capacitor (C_C) in parallel to the R_A resistance when an unstable event such as oscillation of the output voltage occurs. Calculate C_C using the following equation :

$$C_C\,[\mathrm{F}] = \frac{1}{2 \bullet \pi \bullet R_A \bullet 20\,\mathrm{kHz}}$$

Caution The above connection diagram and constant will not guarantee successful operation. Perform through evaluation using the actual application to set the constant.

■ Precautions

- Mount external capacitors, the diode, and the coil as close as possible to the IC.
- Characteristics ripple voltage and spike noise occur in IC containing switching regulators. Moreover rush current flows at the time of a power supply injection. Because these largely depend on the coil, the capacitor and impedance of power supply used, fully check them using an actually mounted model.
- Make sure that the dissipation of the switching transistor (especially at a high temperature) does not exceed the allowable power dissipation of the package.
- The performance of this IC varies depending on the design of the PCB patterns, peripheral circuits and external parts. Thoroughly test all settings with your device. Also, try to use the recommended external parts. If not, contact an SII sales person.
- Do not apply an electrostatic discharge to this IC that exceeds the performance ratings of the built-in electrostatic protection circuit.
- SII claims no responsibility for any disputes arising out of or in connection with any infringement by products including this IC of patents owned by a third party.

■ Application Circuits

1. LCD Power Supply

The following example is an application power supply circuit (15 V / 20 V output) to drive an LCD panel, and its characteristics.

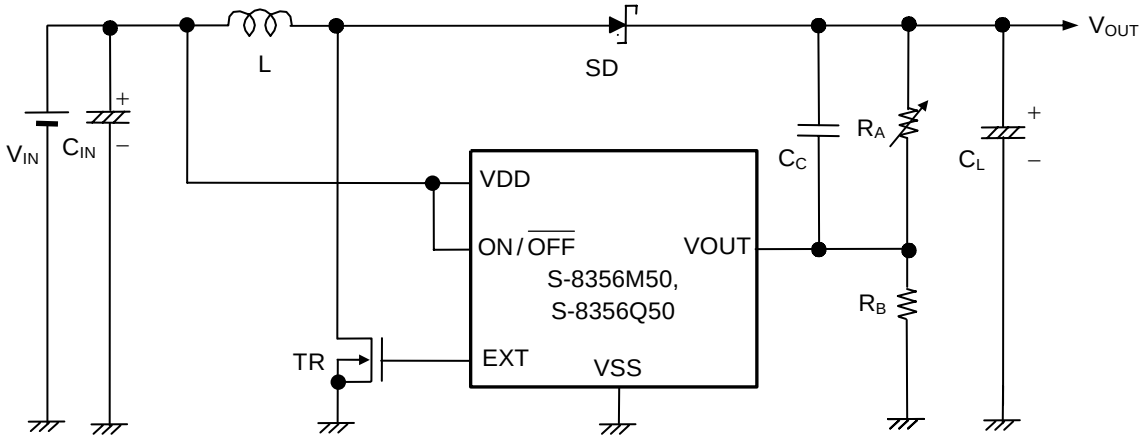

Figure 26 Power Supply Circuit Example for LCD

Table 30

Condition	Output Voltage	IC	L Type Name	TR Type Name	SD Type Name	C_L	R_a	R_b	Cc
1	15 V	S-8356M50	CDRH5D18-220	MCH3405	MA2Z748	F93 (20 V, 10 μF)	580 kΩ	300 kΩ	15 pF
2	20 V	S-8356M50	CDRH5D18-220	FDN337N	MA729	F93 (25 V, 10 μF)	575 kΩ	200 kΩ	15 pF
3	10 V	S-8356Q50	CDRH5D18-100	MCH3405	MA2Z748	F93 (20 V, 10 μF)	560 kΩ	560 kΩ	15 pF

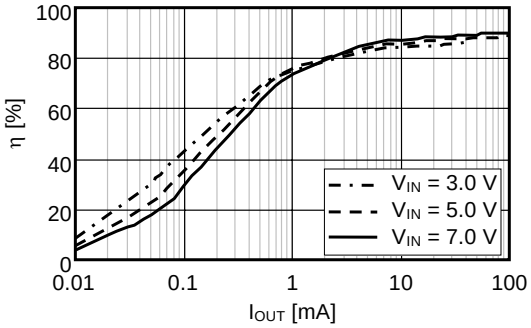
Caution The above connection diagram and constant will not guarantee successful operation. Perform through evaluation using the actual application to set the constant.

2. Output Characteristics of The Power Supply for LCD

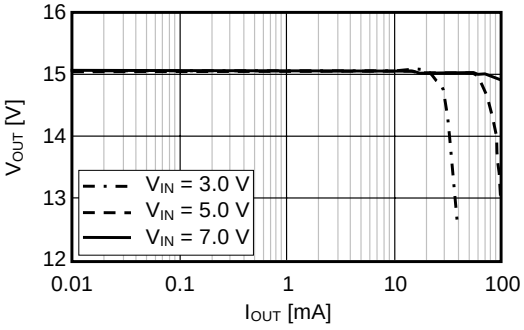
The data of the step-up characteristics (a) Output current (I_{OUT}) vs. Efficiency (η) characteristics, (b) Output current (I_{OUT}) vs. Output voltage (V_{OUT}) characteristics under conditions of 1 to 3 in **Table 30** is shown below.

Condition 1

(a) Output current (I_{OUT}) vs. Efficiency (η)

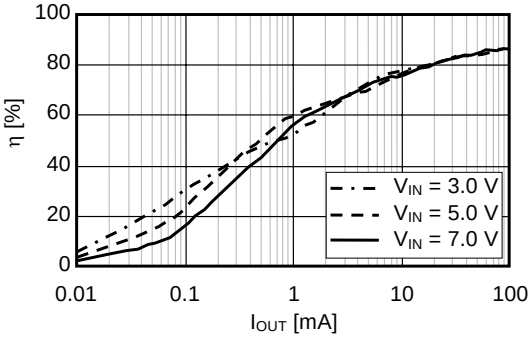


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

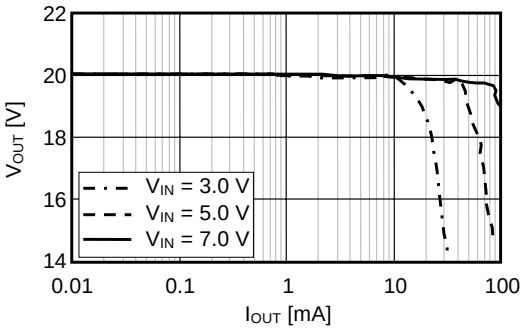


Condition 2

(a) Output current (I_{OUT}) vs. Efficiency (η)

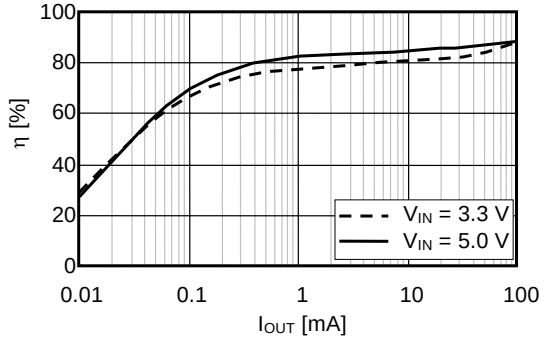


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

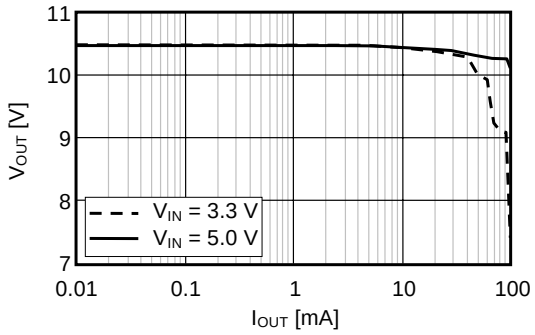


Condition 3

(a) Output current (I_{OUT}) vs. Efficiency (η)



(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})



3. Using Ceramic Capacitor Example

When using small R_{ESR} parts such as ceramic capacitors for the output capacitance, mount a resistor (R_1) corresponding to the R_{ESR} in series with the ceramic capacitor (C_L) as shown in **Figure 27**. R_1 differs depending on "L" value, the capacitance, the wiring, and the application (output load). The following example shows a circuit using R_1 = 100 mΩ, output voltage = 3.3 V, output load = 500 mA and its characteristics.

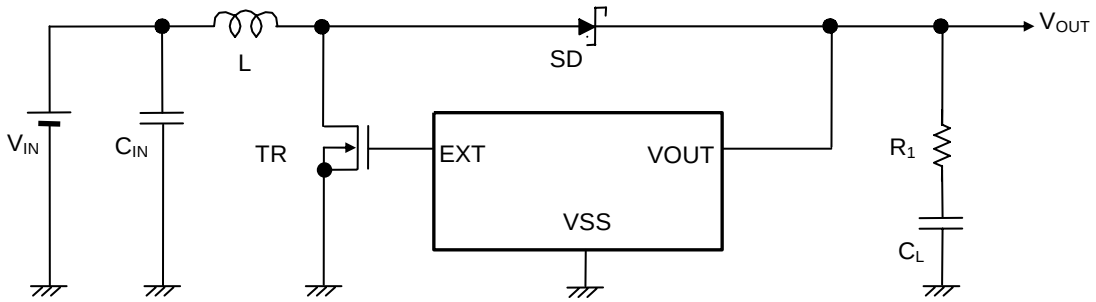


Figure 27 Using Ceramic Capacitor Circuit Example

Table 31

Condition	IC	L Type Name	TR Type Name	SD Type Name	SD Type Name	R_1
1	S-8357F33	CDRH6D28-220	FDN335N	M1FH3	10 μF × 2	100 mΩ
2	S-8358B50	CDRH6D28-470	FDN335N	M1FH3	10 μF × 2	100 mΩ
3	S-8357N33	CDRH6D28-100	FDN335N	M1FH3	10 μF × 2	100 mΩ

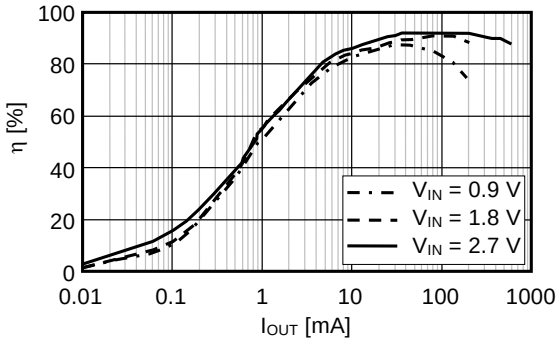
Caution The above connection diagram and constant will not guarantee successful operation. Perform through evaluation using the actual application to set the constant.

4. Output Characteristics of The Using Ceramic Capacitor Circuit Example

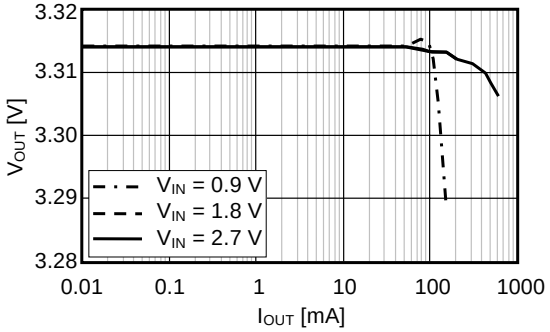
The data of the step-up characteristics (a) Output current (I_{OUT}) vs. Efficiency (η) characteristics, (b) Output current (I_{OUT}) vs. Output voltage (V_{OUT}) characteristics, (c) Output Current (I_{OUT}) vs. Ripple voltage (Vr) under conditions of 1 to 3 in **Table 31** is shown below.

Condition 1

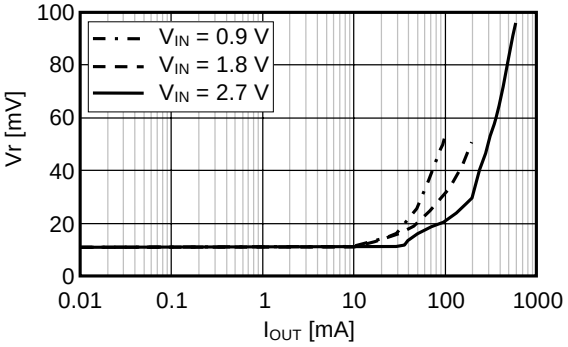
(a) Output current (I_{OUT}) vs. Efficiency (η)



(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

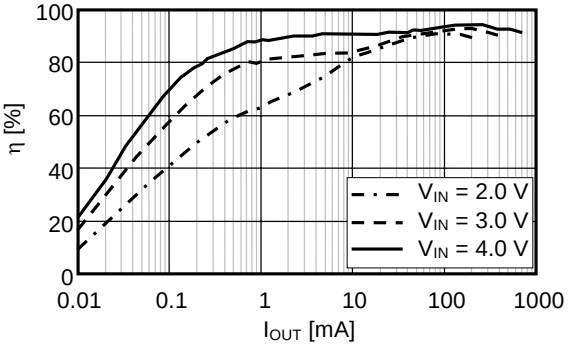


(c) Output Current (I_{OUT}) vs. Ripple voltage (V_r)

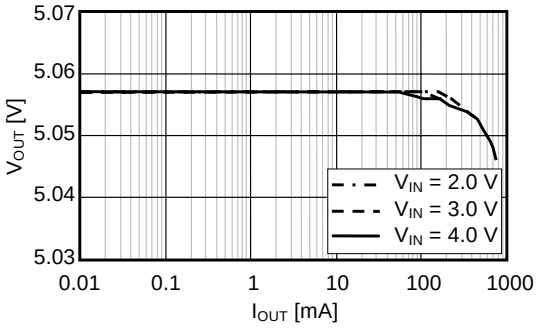


Condition 2

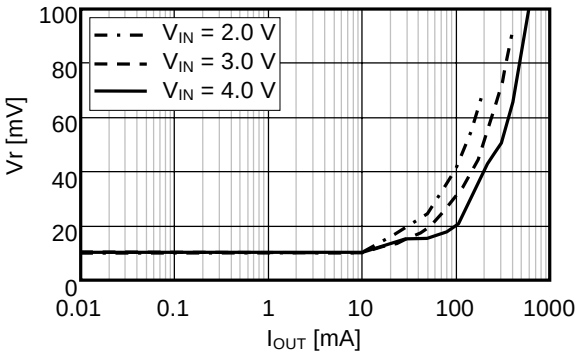
(a) Output current (I_{OUT}) vs. Efficiency (η)



(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

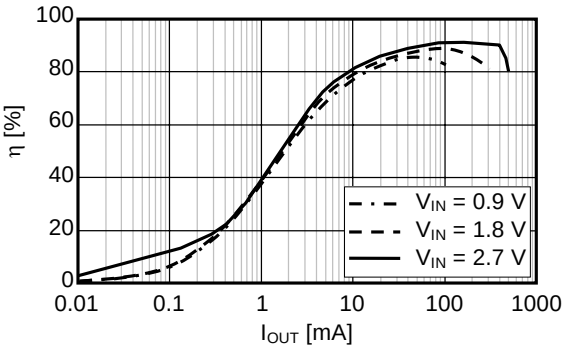


(c) Output Current (I_{OUT}) vs. Ripple voltage (V_r)

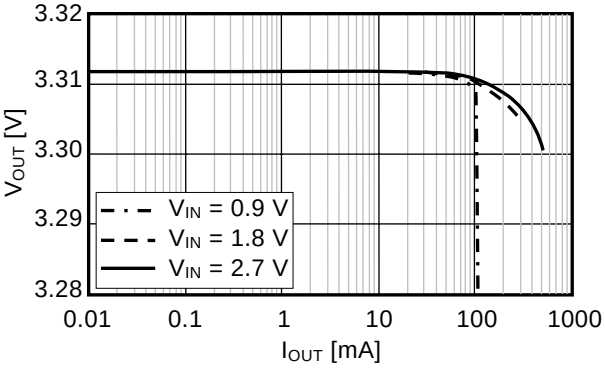


Condition 3

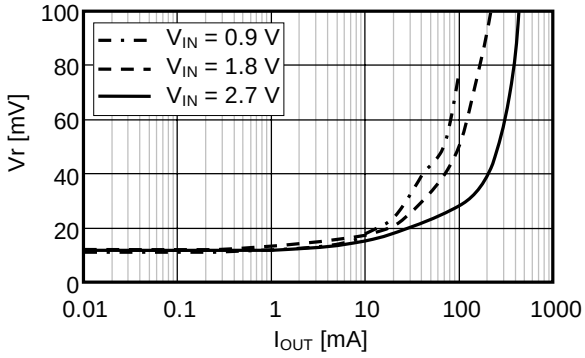
(a) Output current (I_{OUT}) vs. Efficiency (η)



(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})



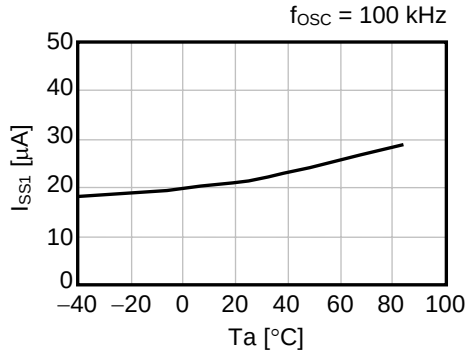
(c) Output Current (I_{OUT}) vs. Ripple voltage (V_r)

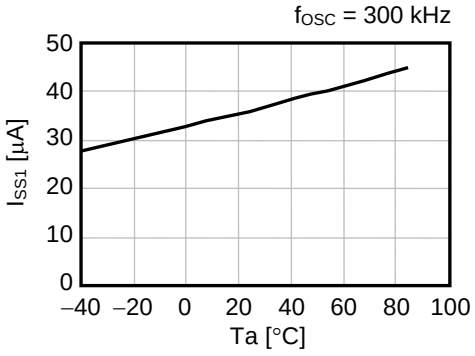


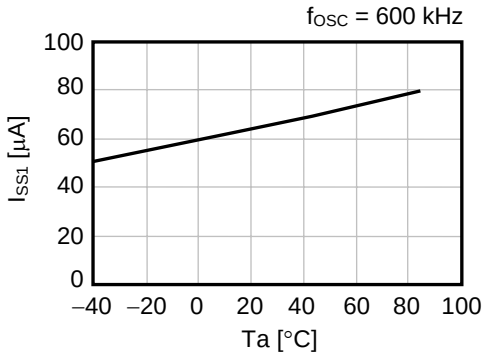
■ Characteristics (Typical Data)

1. Example of Major Temperature characteristics (Ta = –40 to +85 °C)

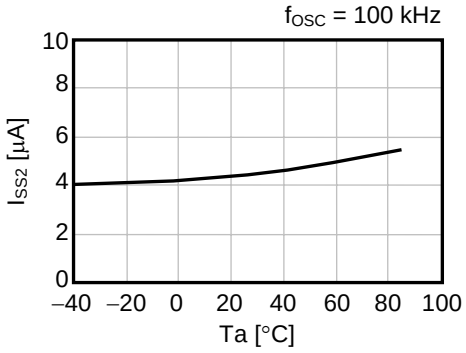
(1) Current Consumption 1 (I_{SS1}) vs. Temperature (Ta) (V_{OUT} = 3.3 V)

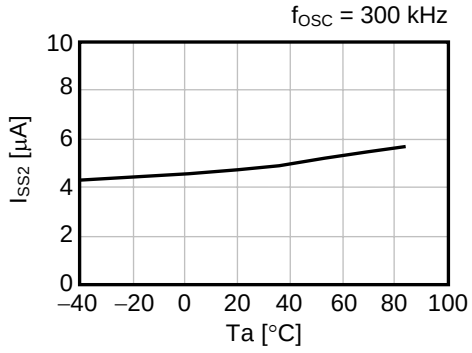


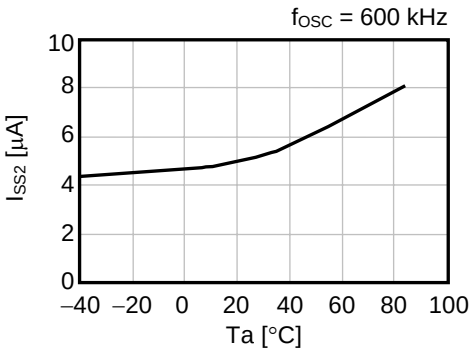




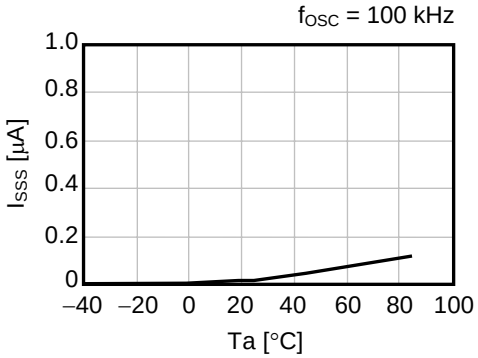
(2) Current Consumption 2 (I_{SS2}) vs. Temperature (Ta) (V_{OUT} = 3.3 V)

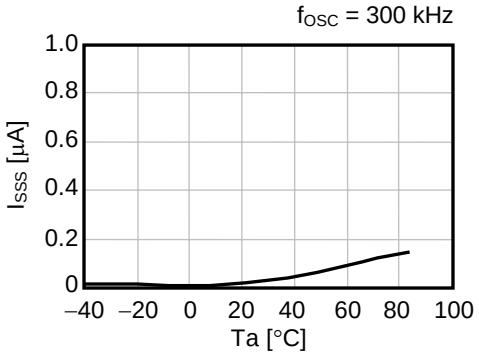




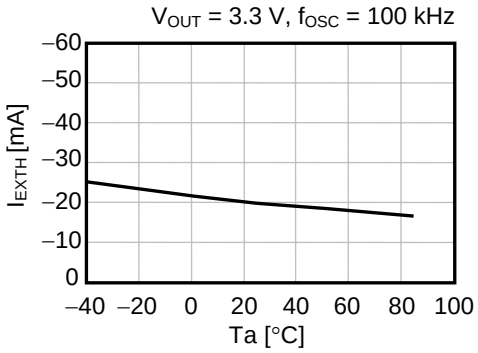


(3) Current Consumption at Shutdown (I_{SSS}) vs. Temperature (Ta)

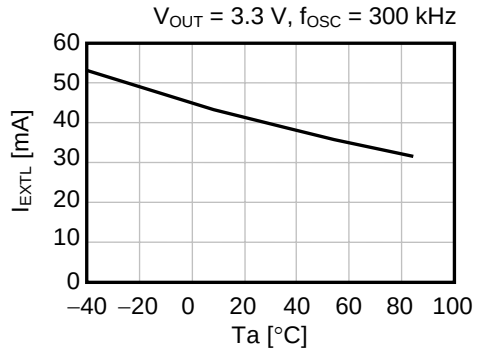




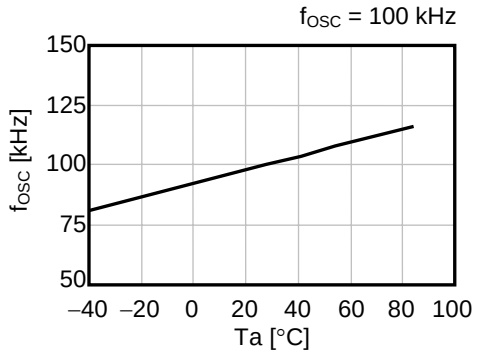
(4) EXT Pin Output Current "H" (I_{EXTH}) vs. Temperature (Ta)

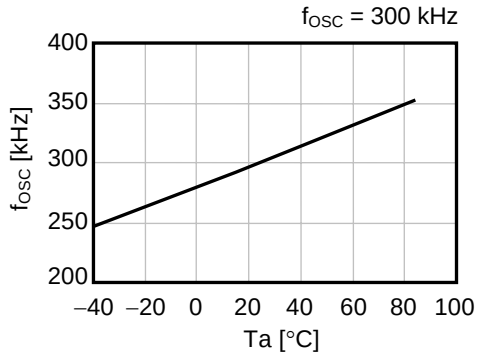


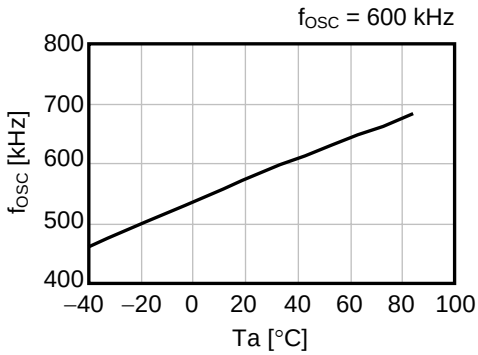
(5) EXT Pin Output Current "L" (I_{EXTL}) vs. Temperature (Ta)



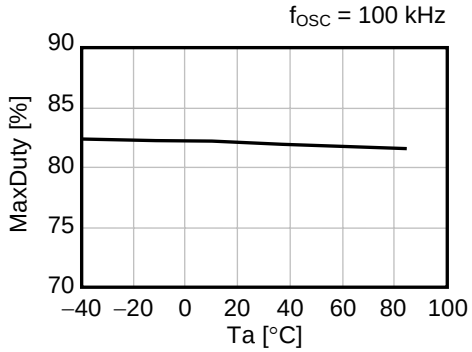
(6) Oscillation Frequency (f_{OSC}) vs. Temperature (Ta) (V_{OUT} = 3.3 V)

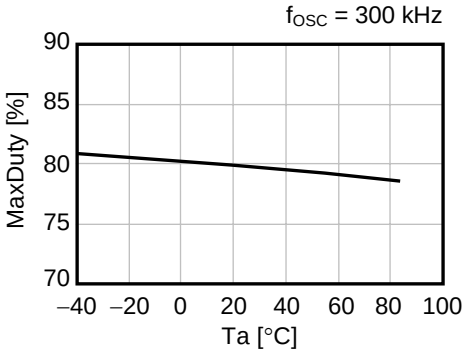


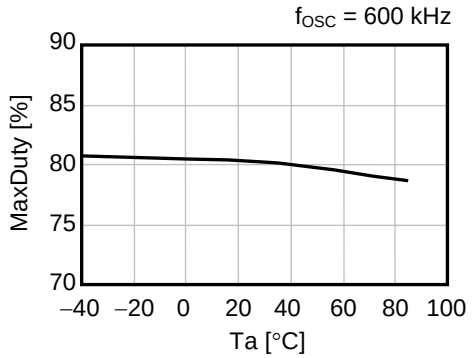




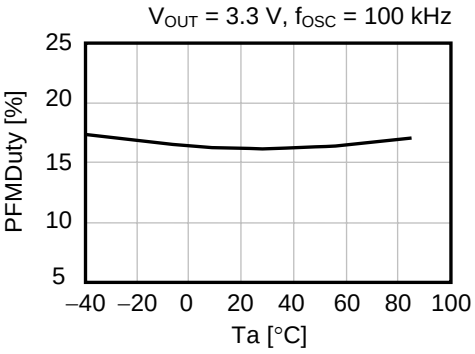
(7) Maximum Duty Ratio (MaxDuty) vs. Temperature (Ta) (V_{OUT} = 3.3 V)



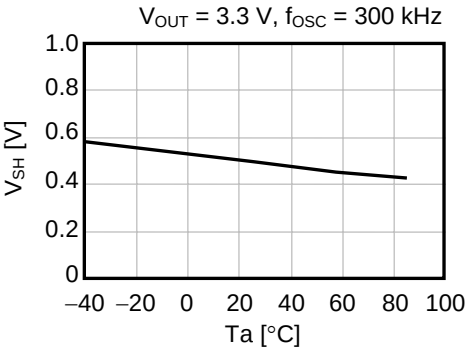




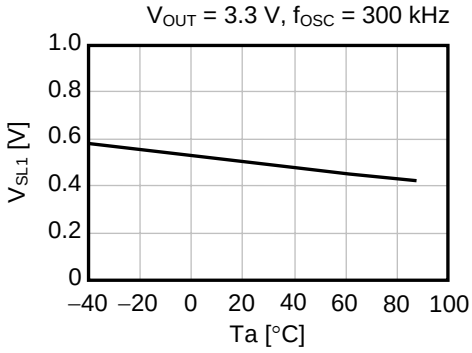
(8) PWM / PFM Switching Duty Ratio (PFMDuty) vs. Temperature (Ta) (S-8356/58 Series)



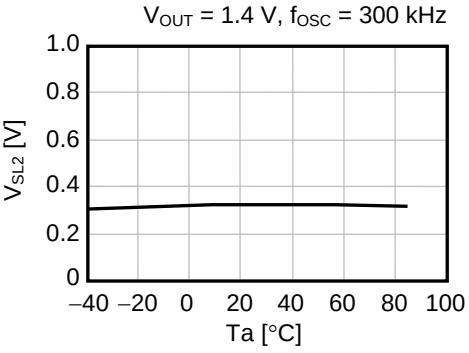
(9) ON / $\overline{\text{OFF}}$ Pin Input Voltage "H" (V_{SH}) vs. Temperature (Ta)



(10) ON / $\overline{\text{OFF}}$ Pin Input Voltage "L" 1 (V_{SL1}) vs. Temperature (Ta)

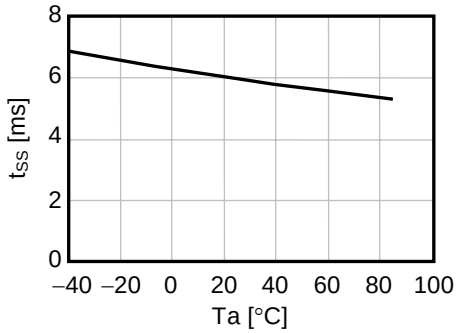


(11) ON / $\overline{\text{OFF}}$ Pin Input Voltage "L" 2 (V_{SL2}) vs. Temperatuer (Ta)

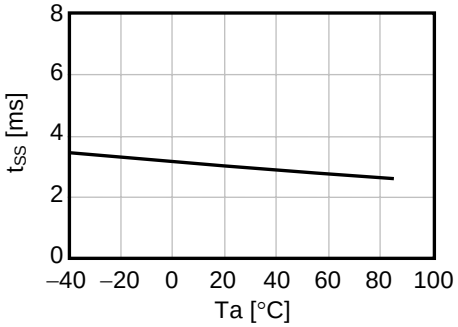


(12) Soft Start Time (t_{SS}) vs. Temperature (Ta) (V_{OUT} = 3.3 V)

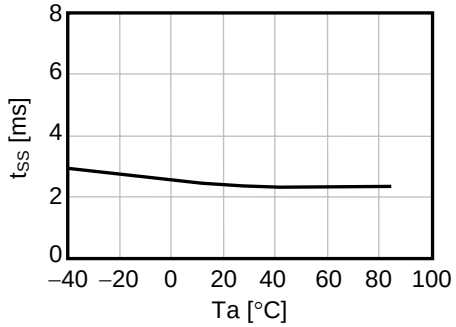
f_{OSC} = 100 kHz



f_{OSC} = 300 kHz

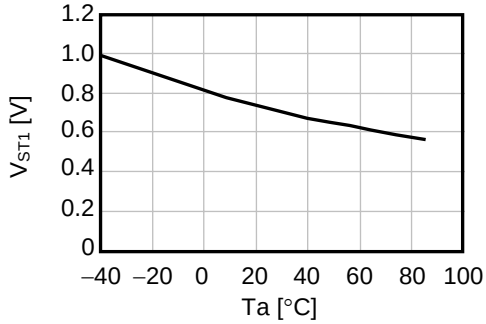


f_{OSC} = 600 kHz



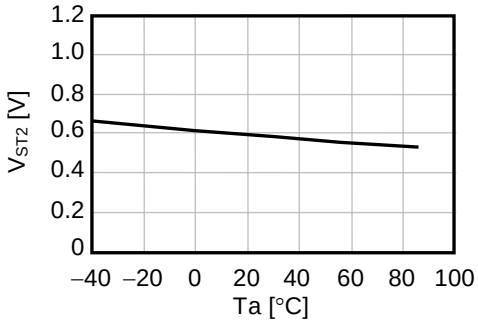
(13) Operation Start Voltage (V_{ST1}) vs. Temperature (Ta)

V_{OUT} = 3.3 V, f_{OSC} = 100 kHz

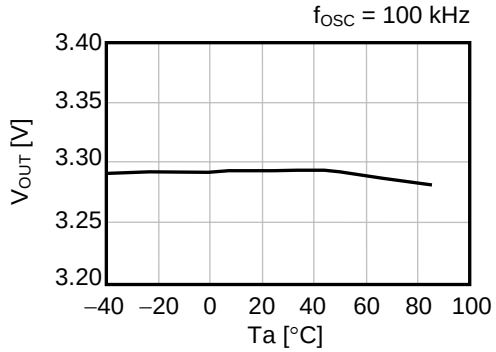


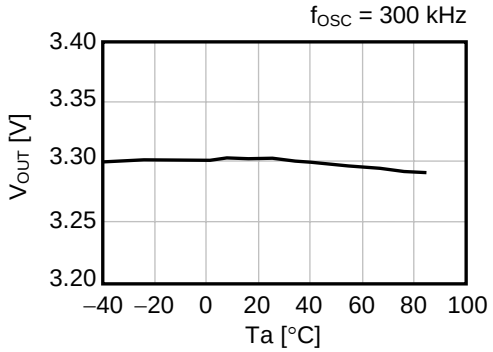
(14) Oscillation Start Voltage (V_{ST2}) vs. Temperature (Ta)

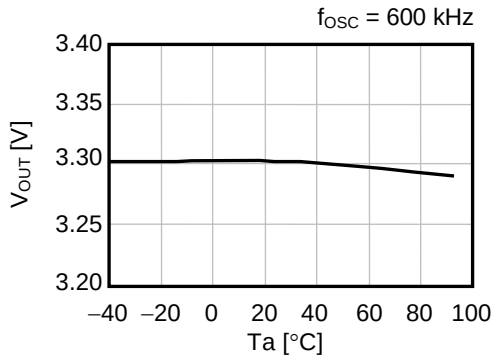
V_{OUT} = 3.3 V, f_{OSC} = 100 kHz



(15) Output Voltage (V_{OUT}) vs. Temperature (Ta) (V_{OUT} = 3.3 V)

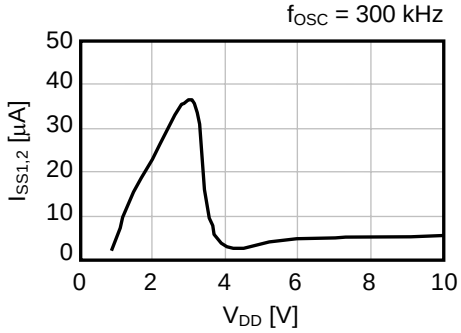


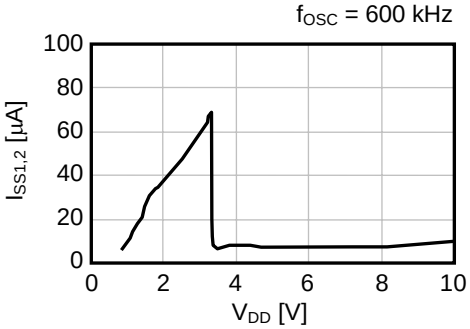




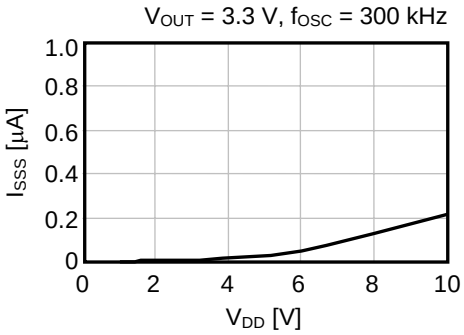
2. Examples of Major Power Supply Dependence Characteristics (Ta = 25 °C)

(1) Current Consumption 1 (I_{SS1}) vs. Power Supply Voltage (V_{DD}), Current Consumption 2 (I_{SS2}) vs. Power Supply Voltage (V_{DD}) (V_{OUT} = 3.3 V)

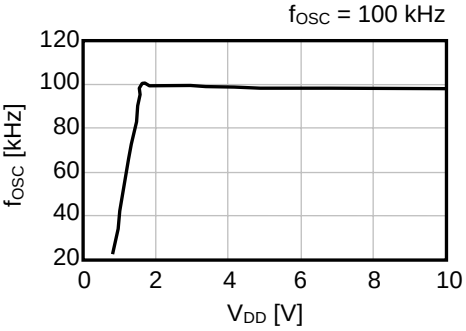


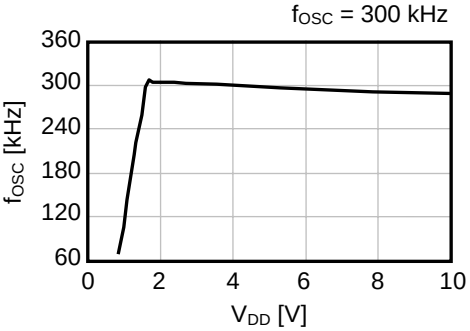


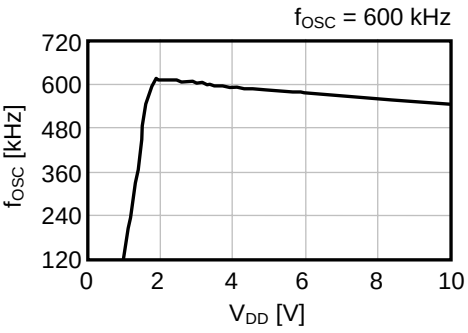
(2) Current Consumption at Shutdown (I_{SSS}) vs. Power Supply Voltage (V_{DD})



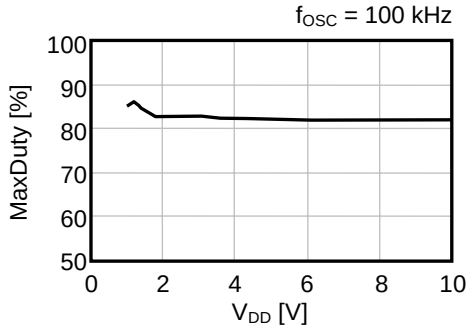
(3) Oscillation Friquency (f_{OSC}) vs. Power Supply Voltage (V_{DD})

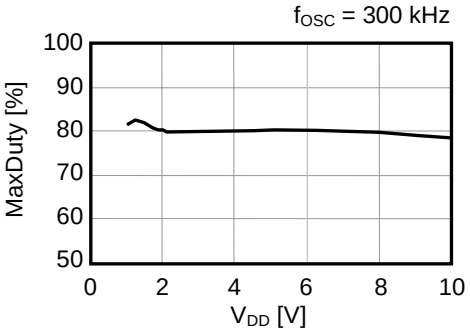


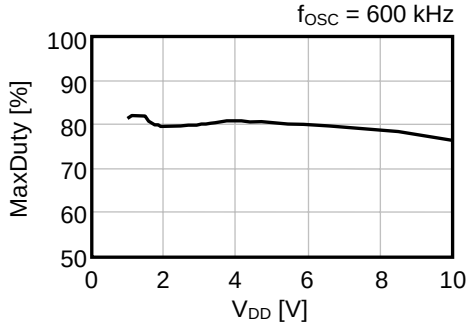




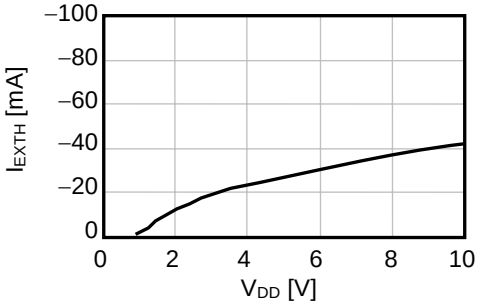
(4) Maximum Duty Ratio (MaxDuty) vs. Power Supply Voltage (V_{DD})



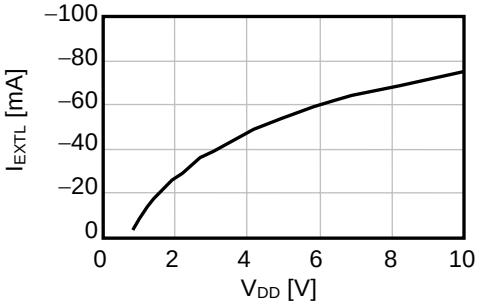




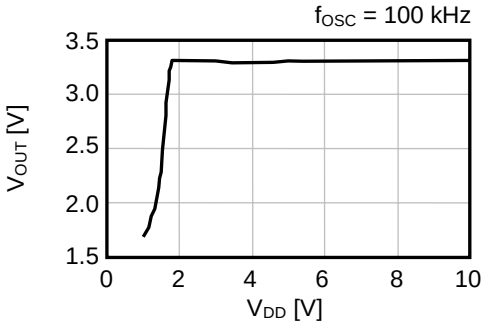
(5) EXT Pin Output Current "H" (I_{EXTH}) vs. Power Supply Voltage (V_{DD})

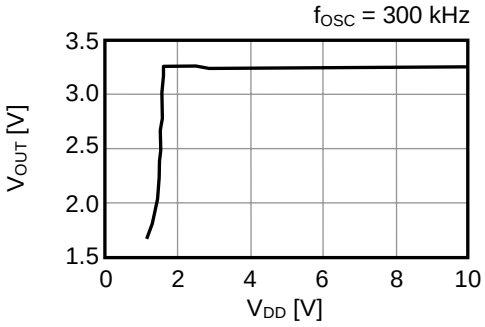


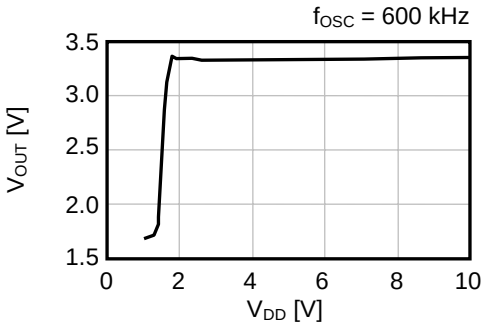
(6) EXT Pin Output Current "L" (I_{EXTL}) vs. Power Supply Voltage (V_{DD})



(7) Output Voltage (V_{OUT}) vs. Power Supply Voltage (V_{DD}) (V_{DD} Separate Type, V_{OUT} = 3.3 V, V_{IN} = 1.98 V, I_{OUT} = 66 mA)

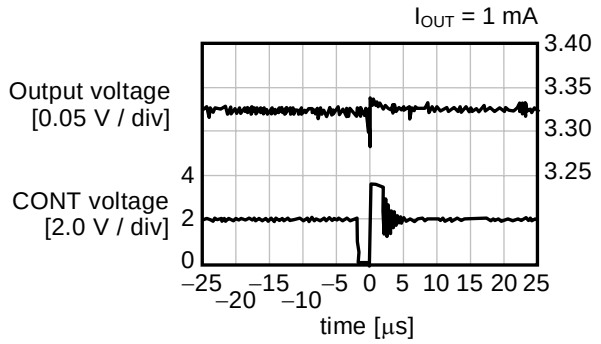


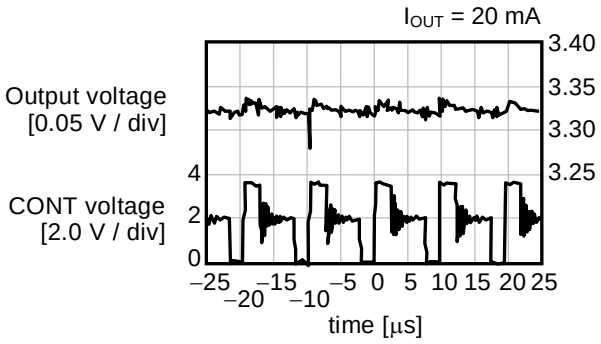


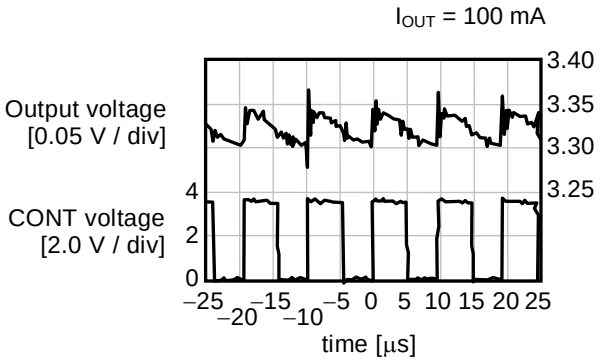


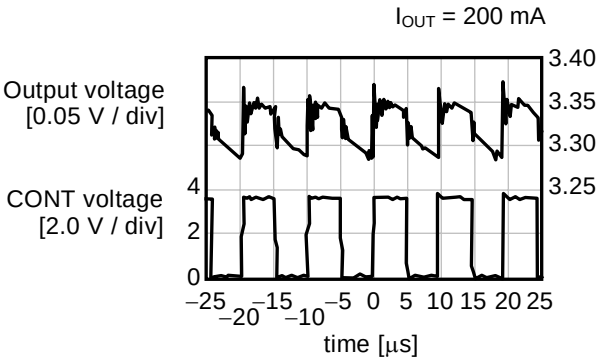
3. Output Waveforms

(1) S-8358B33MC

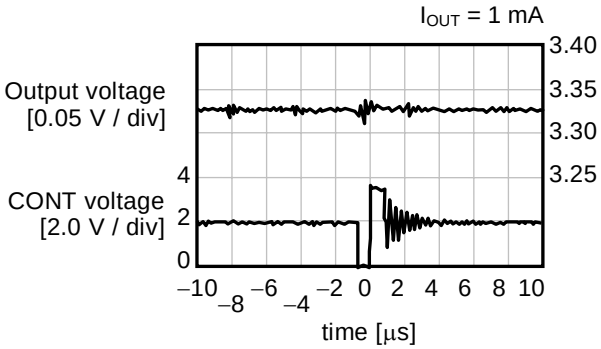


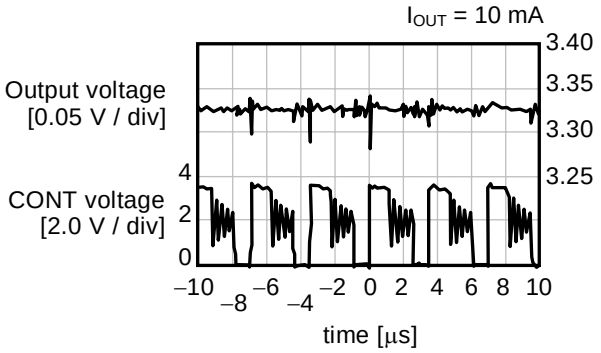


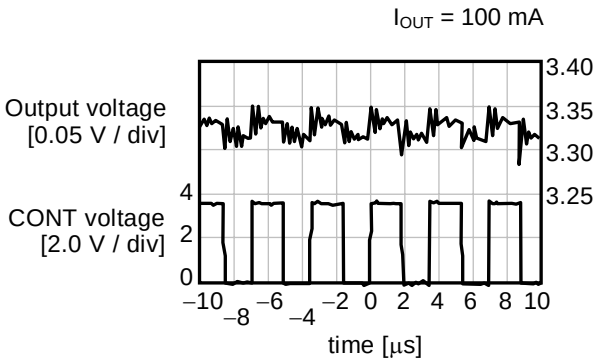


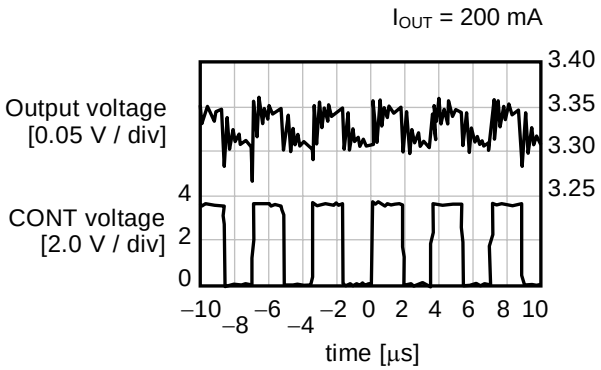


(2) S-8358F33MC

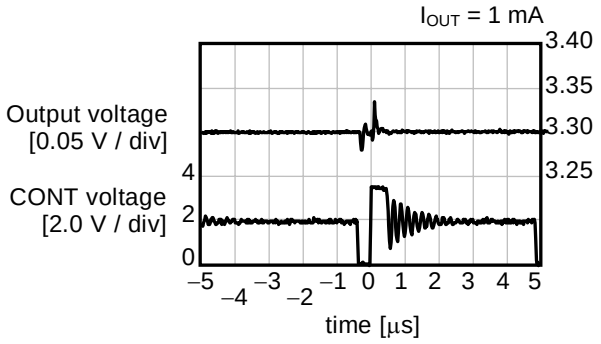


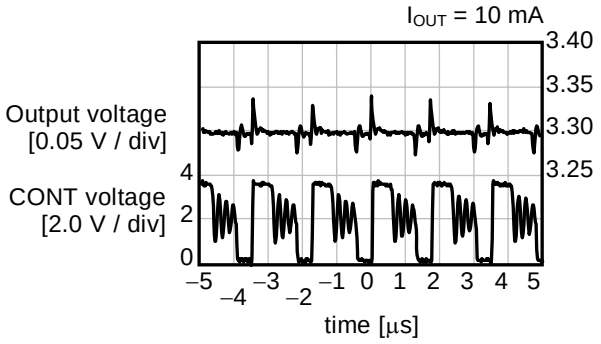


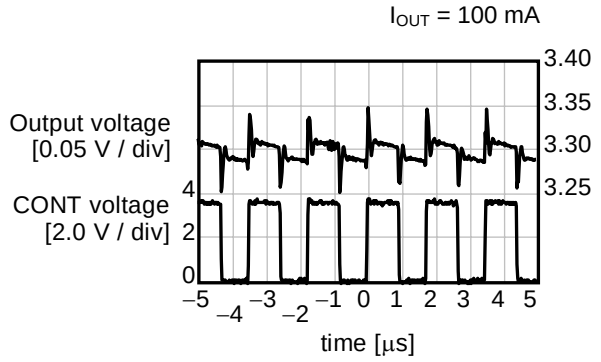


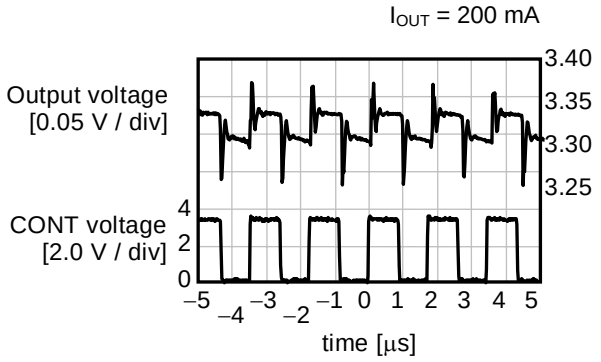


(3) S-8358N33MC





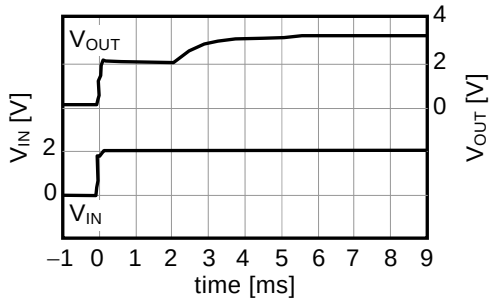




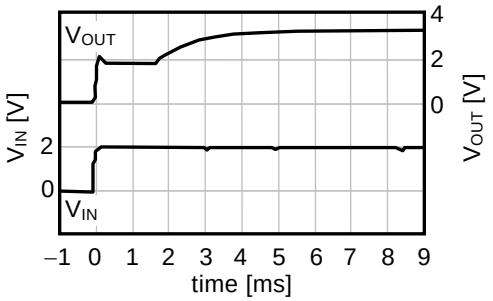
4. Examples of Transient Response Characteristics

(1) Power-On (V_{IN} : 0 V→2 V)

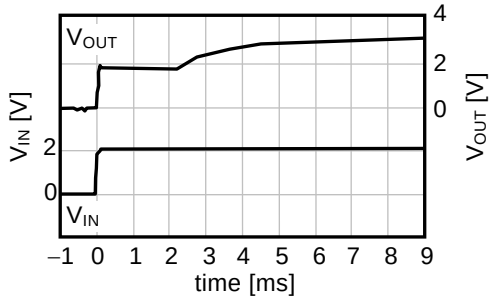
100 kHz, I_{OUT} = 1 mA



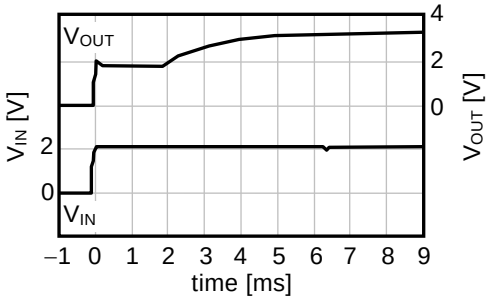
100 kHz, I_{OUT} = 100 mA



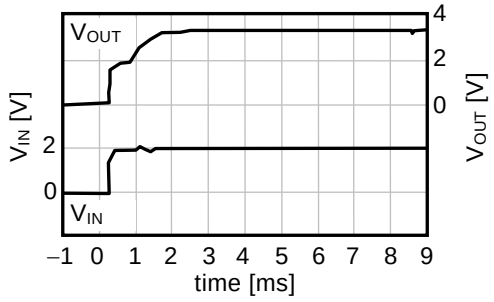
300 kHz, I_{OUT} = 1 mA



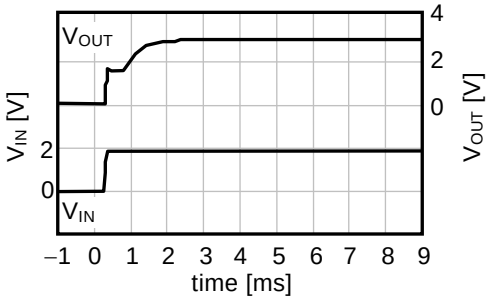
300 kHz, I_{OUT} = 100 mA



600 kHz, I_{OUT} = 1 mA

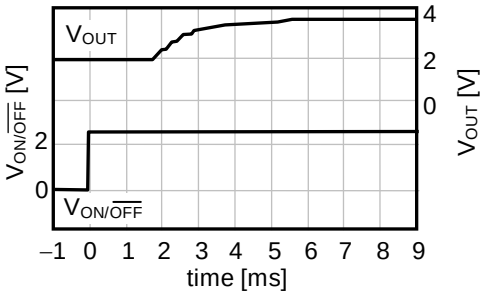


600 kHz, I_{OUT} = 100 mA

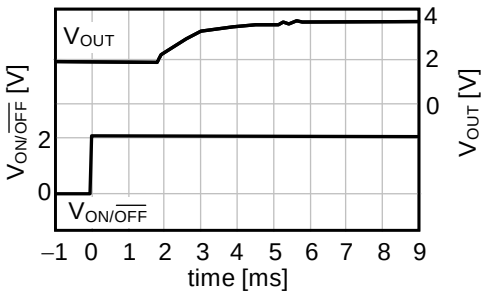


(2) ON/$\overline{\text{OFF}}$ Pin Response ($V_{ON/\overline{OFF}}$: 0 V → 2.0 V)

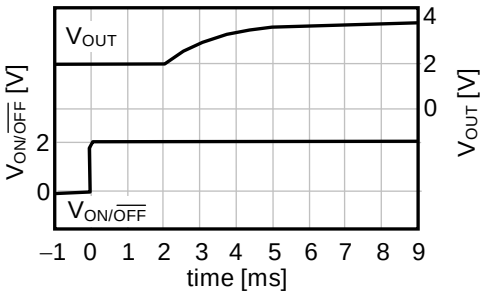
100 kHz, I_{OUT} = 1 mA



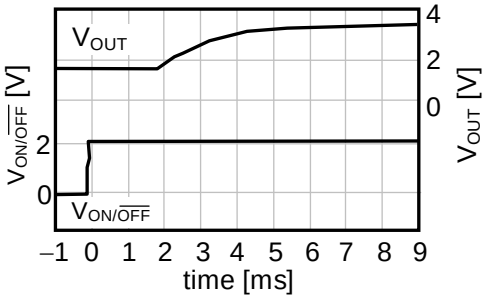
100 kHz, I_{OUT} = 100 mA



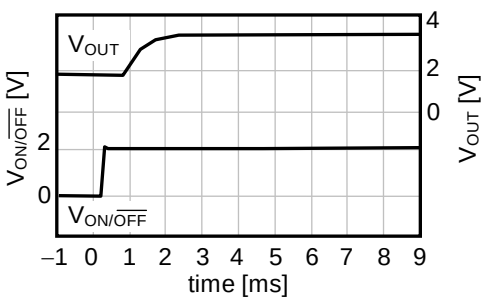
300 kHz, I_{OUT} = 1 mA



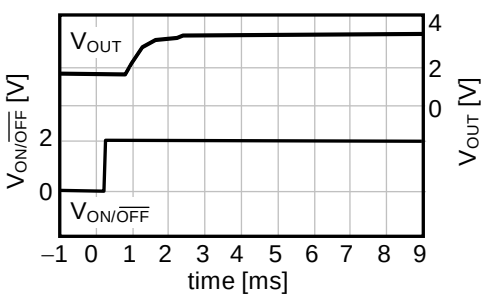
300 kHz, I_{OUT} = 100 mA



600 kHz, I_{OUT} = 1 mA

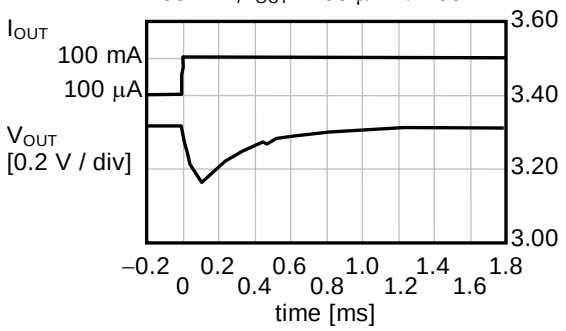


600 kHz, I_{OUT} = 100 mA

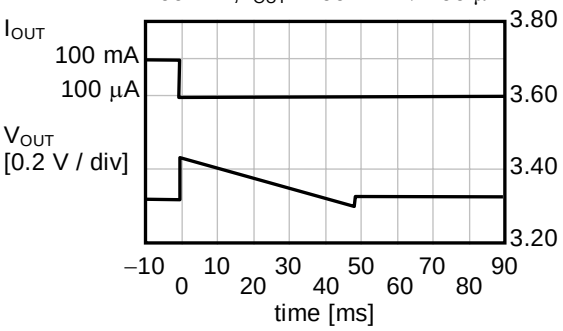


(3) Load Fluctuations

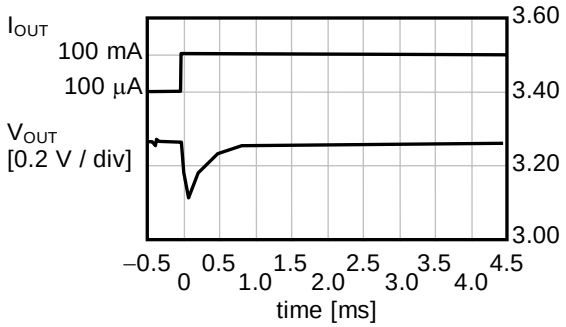
100 kHz, I_{OUT} : 100 μA → 100 mA



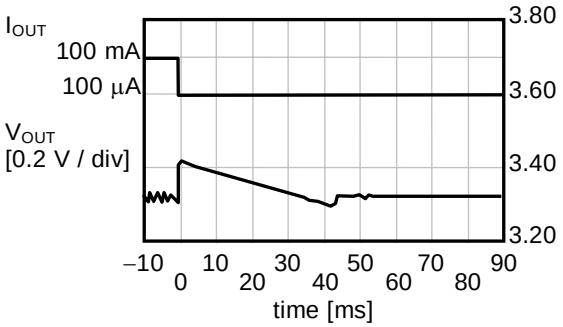
100 kHz, I_{OUT} : 100 mA → 100 μA



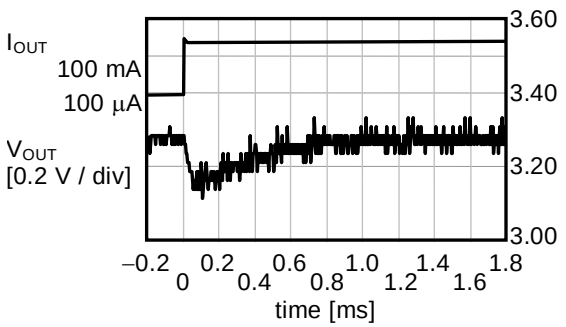
300 kHz, I_{OUT} : 100 μA → 100 mA



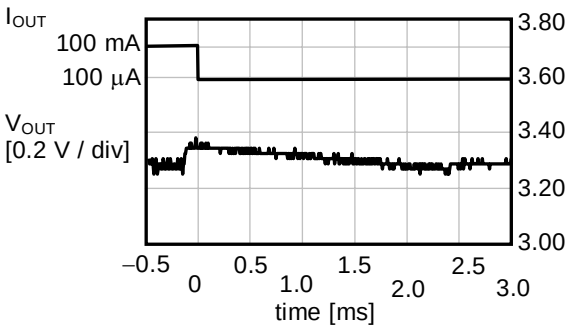
300 kHz, I_{OUT} : 100 mA → 100 μA



600 kHz, I_{OUT} : 0.1 mA → 100 mA

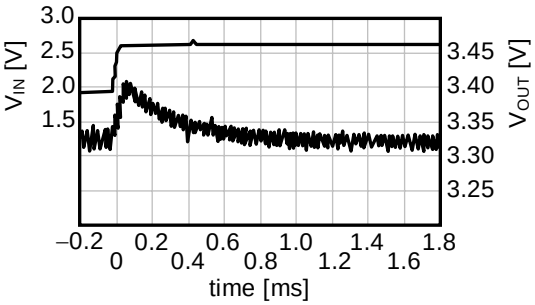


600 kHz, I_{OUT} : 100 mA → 0.1 mA

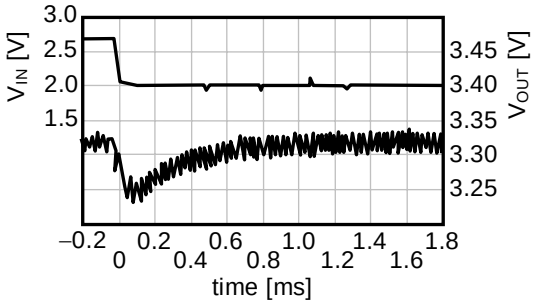


(4) Input Voltage Fluctuations (I_{OUT} = 100 mA)

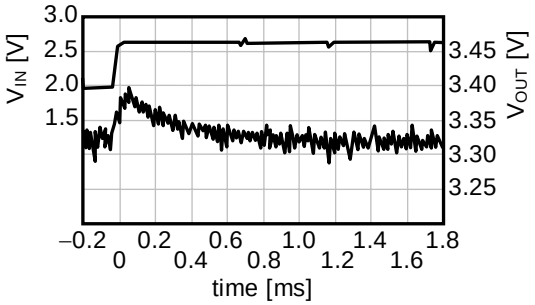
100 kHz, V_{IN} = 1.98 V → 2.64 V



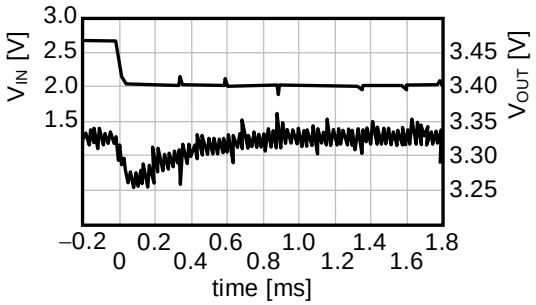
100 kHz, V_{IN} = 2.64 V → 1.98 V



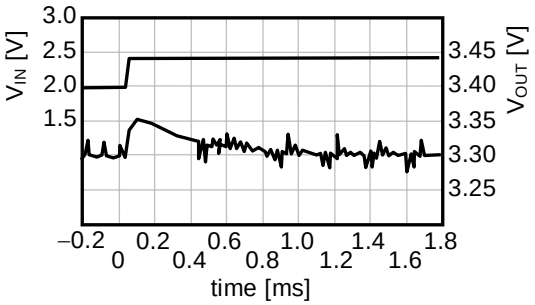
300 kHz, V_{IN} = 1.98 V → 2.64 V



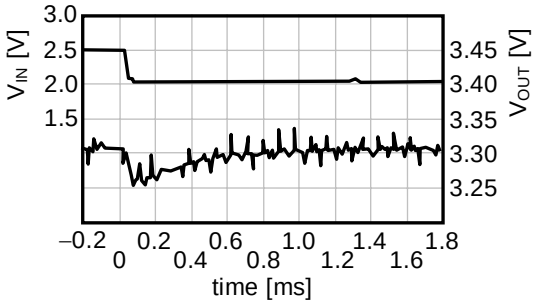
300 kHz, V_{IN} = 2.64 V → 1.98 V



600 kHz, V_{IN} = 1.98 V → 2.64 V



600 kHz, V_{IN} = 2.64 V → 1.98 V



■ Reference Data

Use this reference data to choose the external parts. This reference data makes it possible to choose the recommended external part based on the application and characteristics data.

1. External Parts for Reference Data

Table 32 Efficiency vs. Output Current Characteristics and Output Voltage vs. Output Current Characteristics for External

Condition	Product Name	Oscillation Frequency	Output Voltage	Control System	Inductor	Transistor	Diode	Output capacitor
1	S-8357F33	300 kHz	3.3 V	PWM	CDRH104R-220	FDN335N	M1FH3	F93 (16 V, 47 μF) × 2

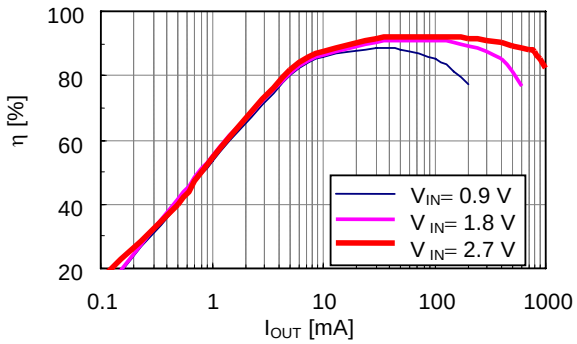
Caution The values shown in the characteristics column of Table 33 above are based on the materials provided by each manufacture. However, consider the characteristics of the original materials when using the above products.

2. Output Current (I_{OUT}) vs. Efficiency (η) Characteristics, Output Current (I_{OUT}) vs. Output Voltage (V_{OUT}) Characteristics

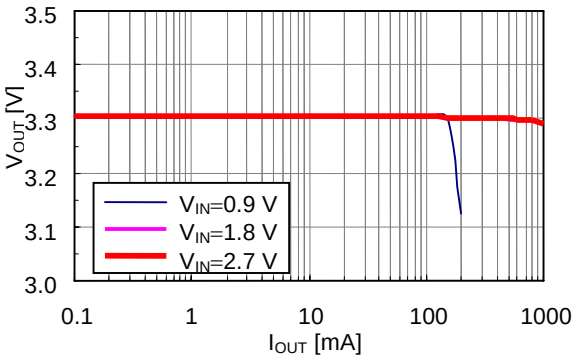
The following shows the actual (a) Output current (I_{OUT}) vs. Efficiency (η) characteristics and (b) Output current (I_{OUT}) vs. Output voltage (V_{OUT}) characteristics under the conditions of No. 1 to 16 in **Table 32**.

Condition 1 S-8357F33

(a) Output current (I_{OUT}) vs. Efficiency (η)

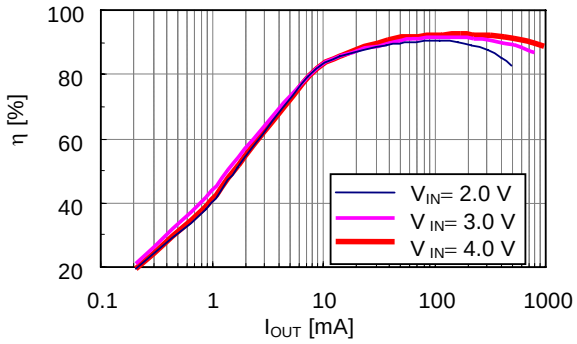


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

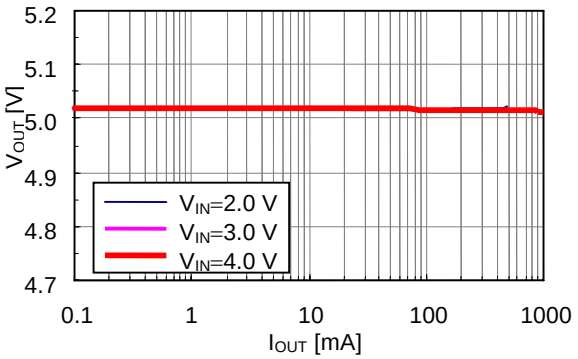


Condition 2 S-8357F50

(a) Output current (I_{OUT}) vs. Efficiency (η)

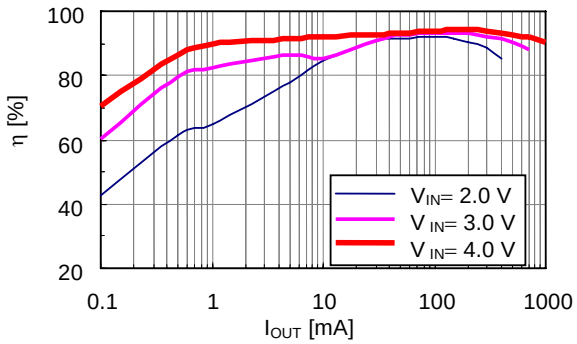


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

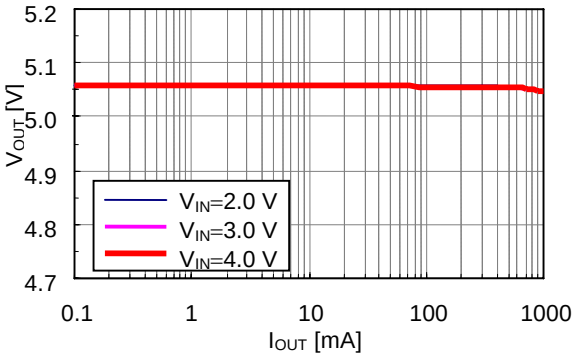


Condition 3 S-8356M50

(a) Output current (I_{OUT}) vs. Efficiency (η)

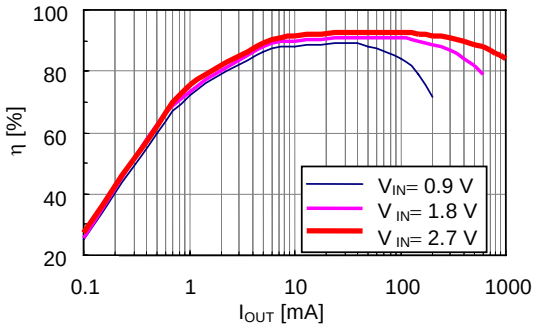


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

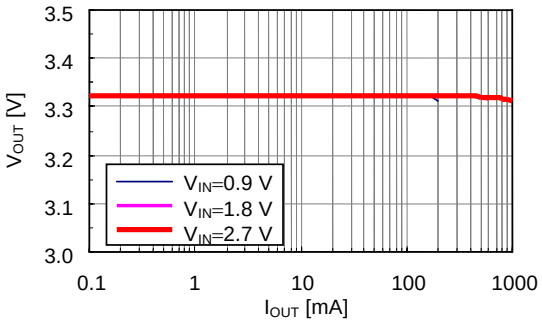


Condition 4 S-8357B33

(a) Output current (I_{OUT}) vs. Efficiency (η)

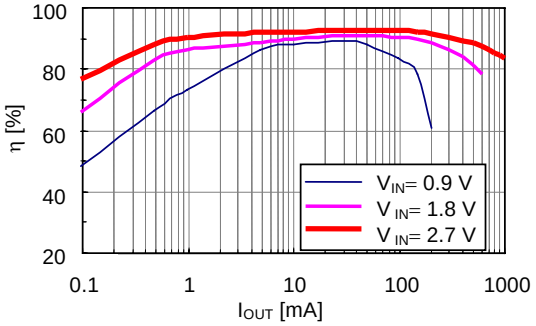


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

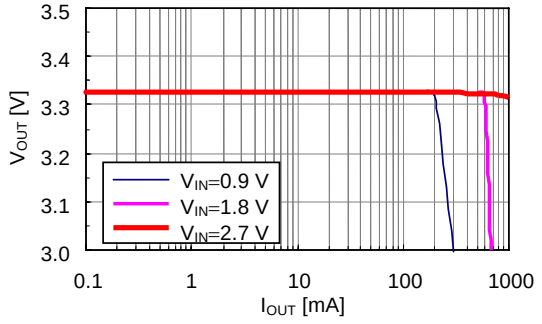


Condition 5 S-8358B33

(a) Output current (I_{OUT}) vs. Efficiency (η)

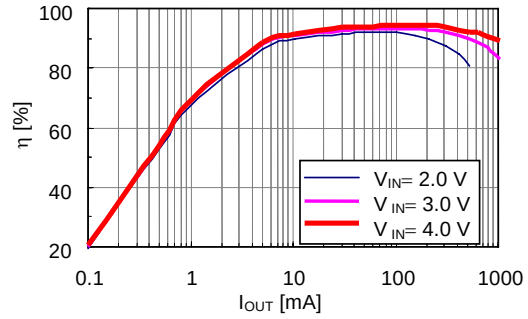


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

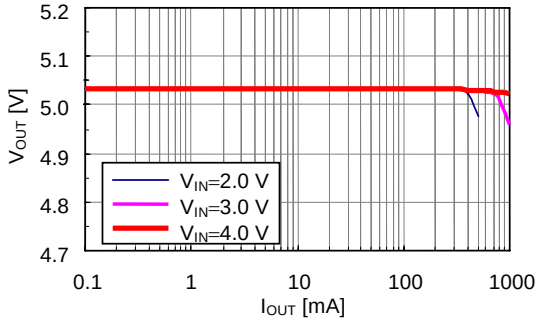


Condition 6 S-8357B50

(a) Output current (I_{OUT}) vs. Efficiency (η)

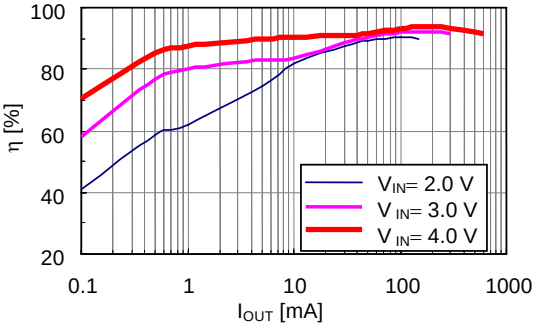


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

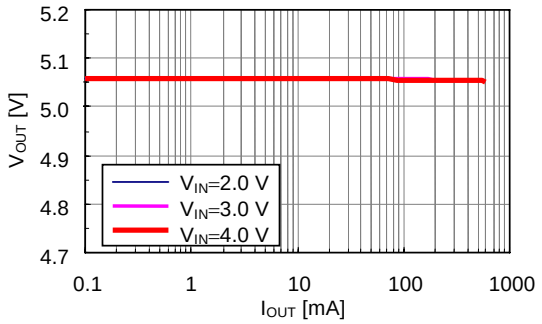


Condition 7 S-8357M50

(a) Output current (I_{OUT}) vs. Efficiency (η)

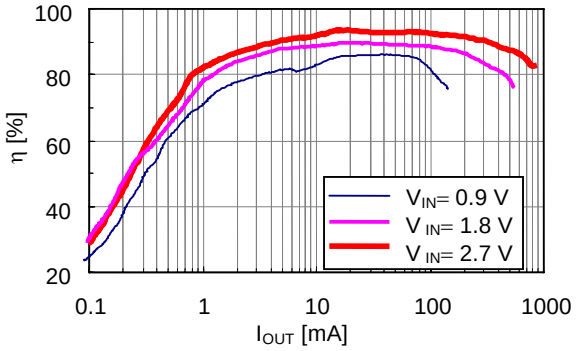


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

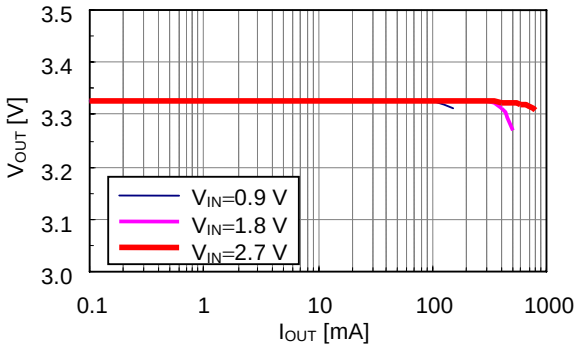


Condition 8 S-8357B33

(a) Output current (I_{OUT}) vs. Efficiency (η)

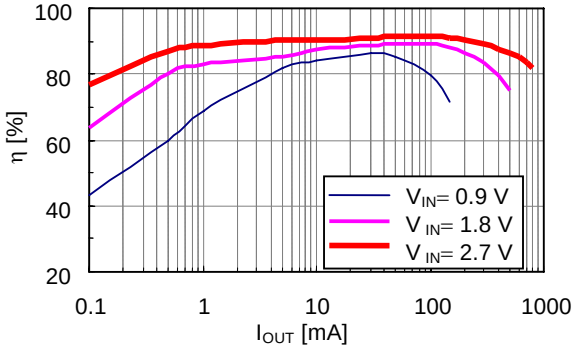


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

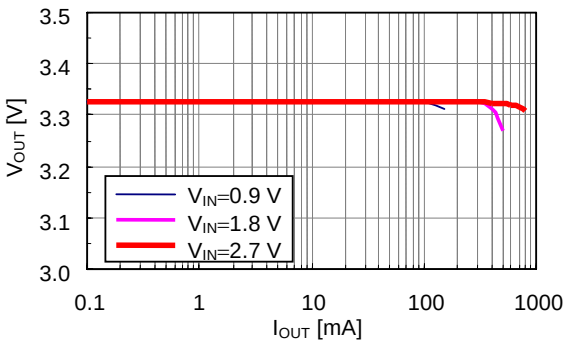


Condition 9 S-8358B33

(a) Output current (I_{OUT}) vs. Efficiency (η)

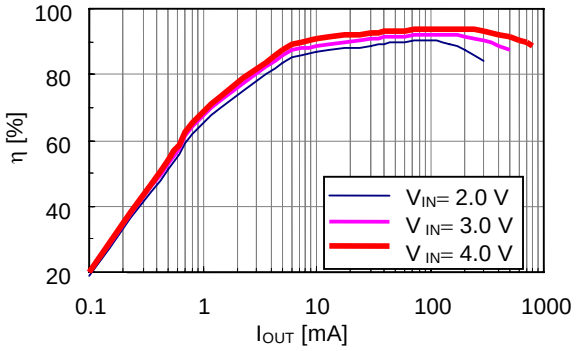


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

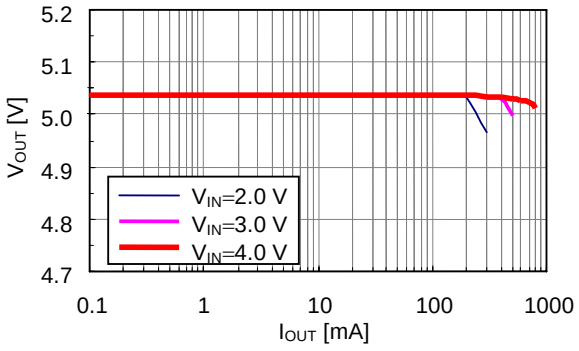


Condition 10 S-8357B50

(a) Output current (I_{OUT}) vs. Efficiency (η)

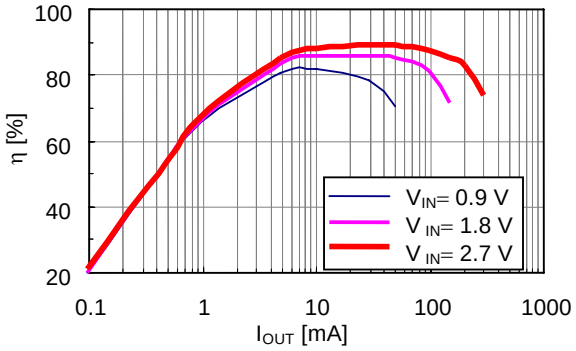


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

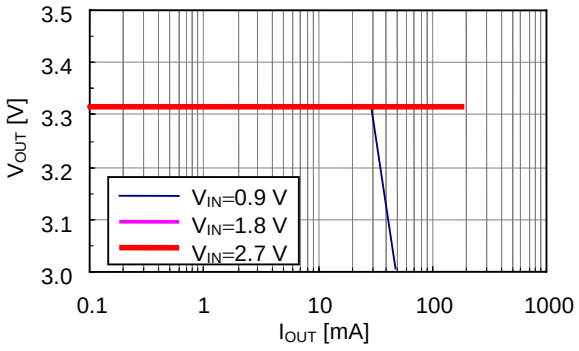


Condition 11 S-8357F33

(a) Output current (I_{OUT}) vs. Efficiency (η)

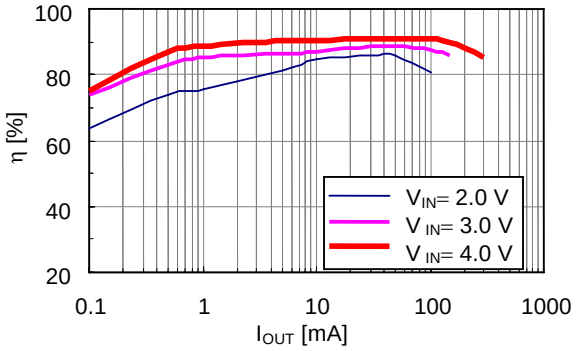


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

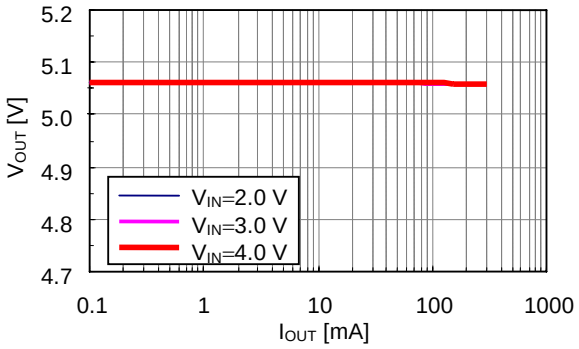


Condition 12 S-8356M50

(a) Output current (I_{OUT}) vs. Efficiency (η)

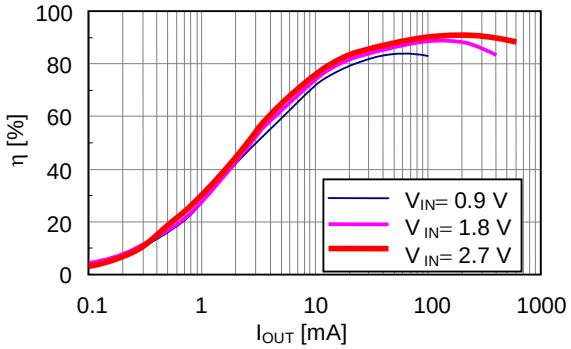


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

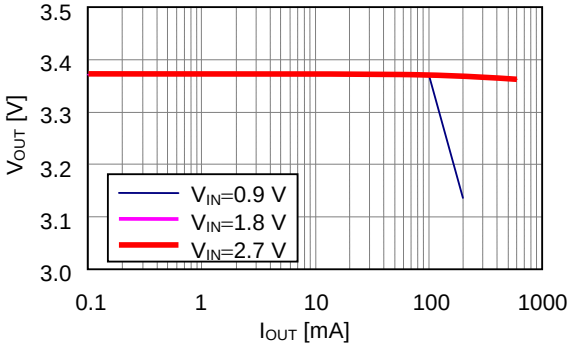


Condition 13 S-8357N33

(a) Output current (I_{OUT}) vs. Efficiency (η)

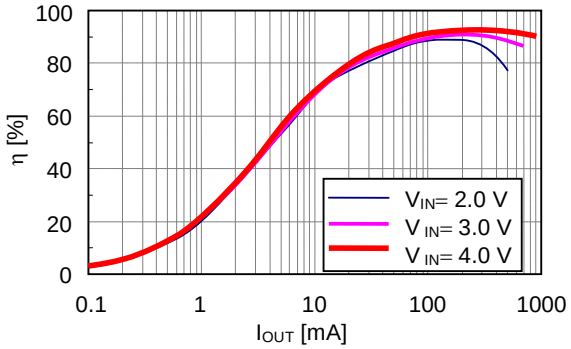


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

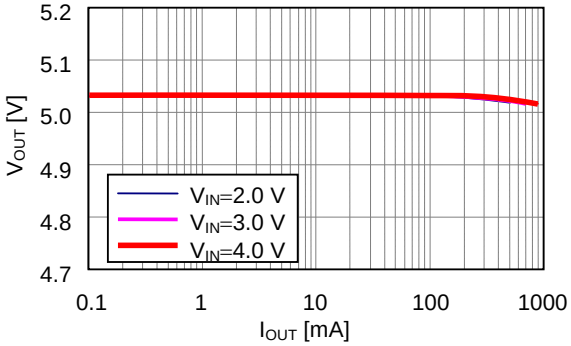


Condition 14 S-8357N50

(a) Output current (I_{OUT}) vs. Efficiency (η)

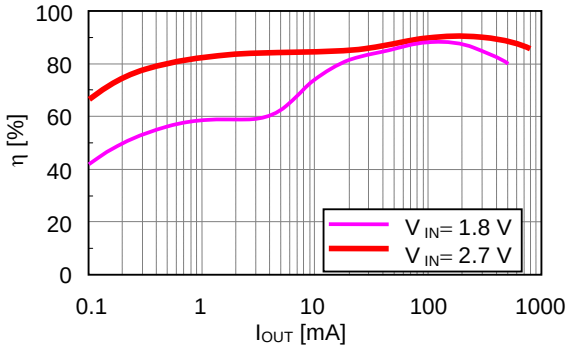


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

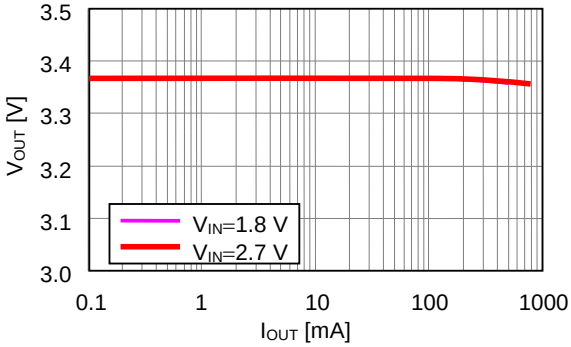


Condition 15 S-8356Q33

(a) Output current (I_{OUT}) vs. Efficiency (η)

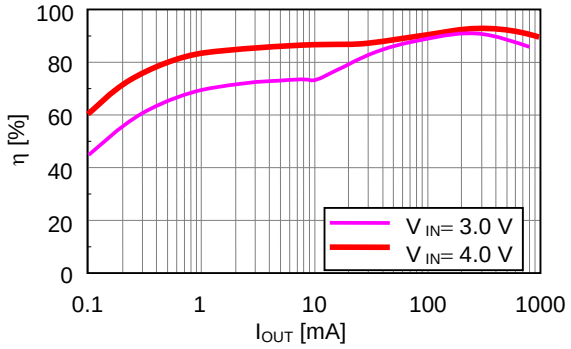


(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})

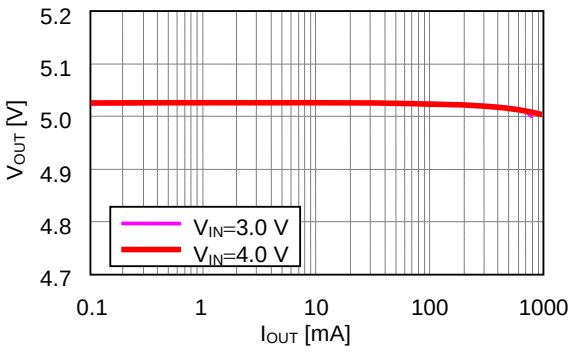


Condition 16 S-8356Q50

(a) Output current (I_{OUT}) vs. Efficiency (η)



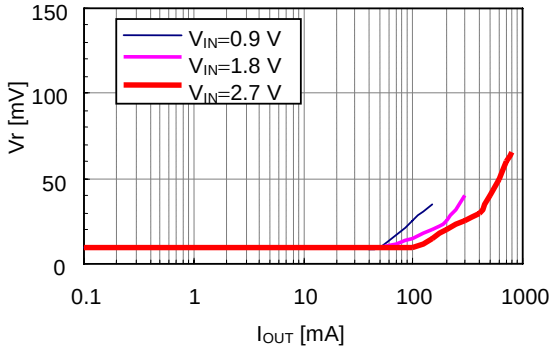
(b) Output current (I_{OUT}) vs. Output voltage (V_{OUT})



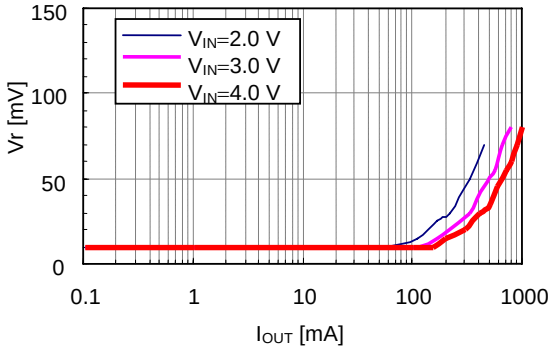
3. Output Current (I_{OUT}) vs. Ripple Voltage (Vr) Characteristics

The following shows the actual Output current (I_{OUT}) vs. Ripple voltage (Vr) characteristics and (b) Output current (I_{OUT}) vs. Output voltage (V_{OUT}) characteristics under the conditions of No. 1 to 16 in **Table 32**.

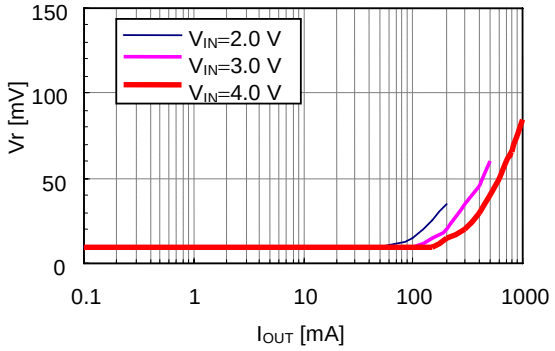
Condition 1 S-8357F33



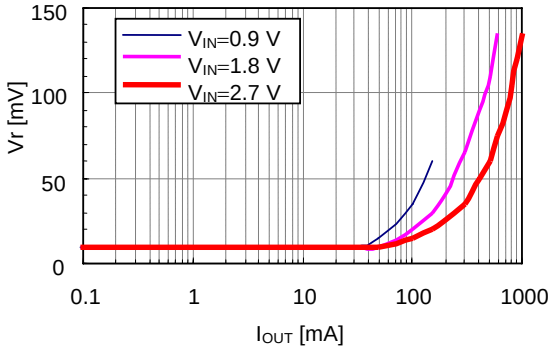
Condition 2 S-8357F50



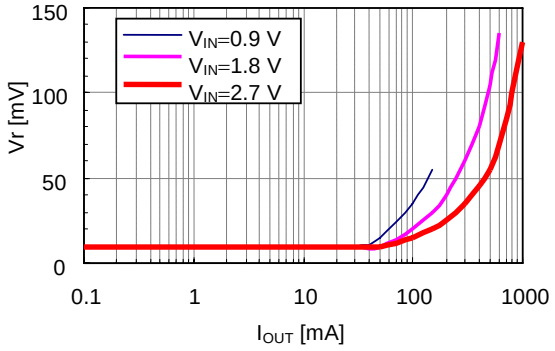
Condition 3 S-8356M50



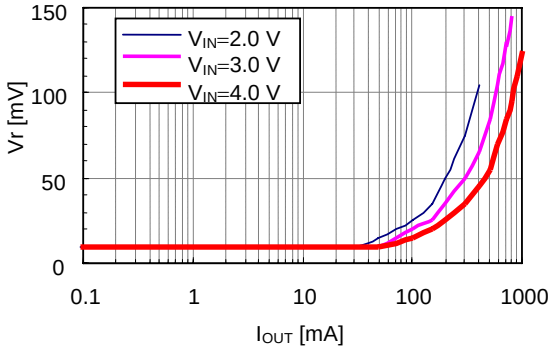
Condition 4 S-8357B33



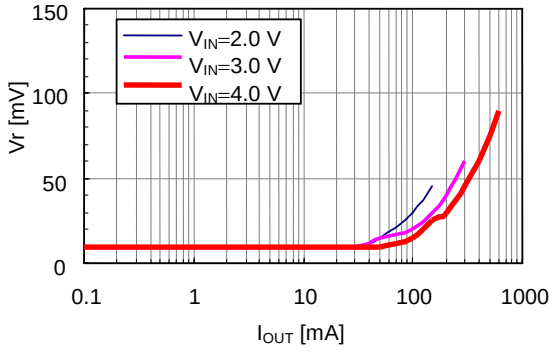
Condition 5 S-8358B33



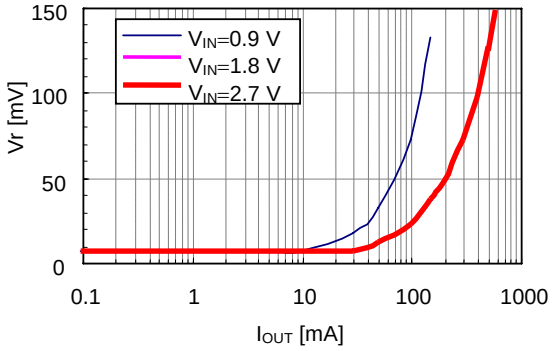
Condition 6 S-8357B50



Condition 7 S-8356M50



Condition 8 S-8357B33



Condition 9 S-8358B33

- The information described herein is subject to change without notice.
- Seiko Instruments Inc. is not responsible for any problems caused by circuits or diagrams described herein whose related industrial properties, patents, or other rights belong to third parties. The application circuit examples explain typical applications of the products, and do not guarantee the success of any specific mass-production design.
- When the products described herein are regulated products subject to the Wassenaar Arrangement or other agreements, they may not be exported without authorization from the appropriate governmental authority.
- Use of the information described herein for other purposes and/or reproduction or copying without the express permission of Seiko Instruments Inc. is strictly prohibited.
- The products described herein cannot be used as part of any device or equipment affecting the human body, such as exercise equipment, medical equipment, security systems, gas equipment, or any apparatus installed in airplanes and other vehicles, without prior written permission of Seiko Instruments Inc.
- The products described herein are not designed to be radiation-proof.
- Although Seiko Instruments Inc. exerts the greatest possible effort to ensure high quality and reliability, the failure or malfunction of semiconductor products may occur. The user of these products should therefore give thorough consideration to safety design, including redundancy, fire-prevention measures, and malfunction prevention, to prevent any accidents, fires, or community damage that may ensue.

Общество с ограниченной ответственностью «МосЧип» ИНН 7719860671 / КПП 771901001
Адрес: 105318, г.Москва, ул.Щербаковская д.3, офис 1107

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
