

## High Precision Foil Resistor with TCR of $\pm 2.0 \text{ ppm}/^\circ\text{C}$ , Tolerance of $\pm 0.005 \%$ and Load Life Stability of $\pm 0.005 \%$

### INTRODUCTION

Bulk Metal® Foil (BMF) technology outperforms all other resistor technologies available today for applications that require high precision and high stability.

This technology has been pioneered and developed by Vishay Foil Resistors (VFR), and products based on this technology are the most suitable for a wide range of applications. BMF technology allows the production of customer-oriented products, designed to satisfy specific challenging technical requirements.

The S series of BMF resistors offers low TCR, excellent load life stability, tight tolerance, fast response time, low current noise, low thermal EMF and low voltage coefficient, all in one resistor.

The S series is virtually insensitive to destabilizing factors. The resistor element is a solid alloy that displays the desirable bulk properties of its parent material, thus it is inherently stable and noise free. The standard design of these resistors provides a unique combination of characteristics found in no other single resistor.

VFR's application engineering department is available to advise and to make recommendations. For non-standard technical requirements and special applications, please contact [foil@vishaypg.com](mailto:foil@vishaypg.com).

### FEATURES

- Temperature coefficient of resistance (TCR):
  - 55 °C to + 125 °C, 25 °C ref.
  - S10XC / D series:  $\pm 2 \text{ ppm}/^\circ\text{C}$  typical (see table 1)
  - S10XK series:  $\pm 1 \text{ ppm}/^\circ\text{C}$  typical (see table 1)
- Power rating: to 1 W at + 125 °C
- Resistance tolerance: to  $\pm 0.005 \%$  (50 ppm)
- Load life stability:  $\pm 0.005 \%$  at 70 °C, 2000 h at rated power
- Resistance range: 0.5  $\Omega$  to 1 M $\Omega$  (for higher or lower values, please contact Application Engineering)
- Vishay Foil resistors are not restricted to standard values; specific "as required" values can be supplied at no extra cost or delivery (e.g. 1K2345 vs. 1K)
- Electrostatic discharge (ESD) at least to 25 kV
  - Non inductive, non capacitive design
  - Rise time: 1 ns effectively no ringing
  - Current noise: 0.010  $\mu\text{V}_{\text{RMS}}/\text{V}$  of applied voltage (< - 40 dB)
  - Thermal EMF: 0.05  $\mu\text{V}/^\circ\text{C}$
  - Voltage coefficient: < 0.1 ppm/V
  - Low inductance: < 0.08  $\mu\text{H}$
  - Non hot-spot design
  - Terminal finishes available: lead (Pb)-free, tin/lead alloy
  - Matched sets are available on request (TCR tracking: to 0.5 ppm/ $^\circ\text{C}$ )
- Prototype quantities available in just 5 working days or sooner. For more information, please contact [foil@vishaypg.com](mailto:foil@vishaypg.com)
- For better TCR performances please review the datasheets for the **Z Series** and **Z203**

#### Note

- Standoffs provided to allow proper flushing of flux, debris, and contaminants from under resistor after all solder operations.
- The standoffs shall be so located as to give a lead clearance of 0.010" minimum between the resistor body and the printed circuit board when the standoffs are seated on the printed circuit board.

### STANDARD OPERATIONS AND TEST CONDITIONS

#### A. Standard Test Operations:

By 100 % Inspection

- Short-time overload (6.25 x rated power for 5 s)
- Resistance - tolerance check
- Visual and mechanical

By Sample Inspection

- TCR
- Environmental tests per table 3 on a quarterly basis to establish performance by similarity

#### B. Standard Test Conditions:

- Lead test point: 0.5" (12.7 mm) from resistor body
- Temperature: + 23 °C ± 2 °C
- Relative humidity: per MIL-STD-202

### IMPROVED PERFORMANCE TESTING (IPT)

The preceding information is based on product directly off the production line. Improved performance (meaning increased time stability with load and other stresses) is available through factory conducted "Improved Performance Testing". The test routine is usually tailored to the user's stability objectives and IPT-processed resistors can exhibit improved load-life stability levels of less than 50 ppm.

Various screen test routines are available and all anticipated stresses must be taken into account before settling on one specific test routine. VFR's application engineering department is prepared to discuss and recommend appropriate routines given the full spectrum of anticipated stresses and stability requirements.

### Notes

(1) Load life ΔR maximum can be reduced by 80 %, please contact applications engineering department.

(2) Inductance (L) due mainly to the leads.

(3) The resolution limit of existing test equipment (within the measurement capability of the equipment, or "essentially zero".)

(4) μV/°C relates to EMF due to lead temperature difference and μV/watt due to power applied to the resistor.

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
