

## General Description

The MAX14970 dual-channel buffer with input equalization and preemphasis is ideal to redrive internal serial-ATA (SATA) 1i, 2i, and 3i signals as well as eSATA 1m and 2m signals. The device features high electrostatic discharge (ESD),  $\pm 8\text{kV}$  Human Body Model (HBM) protection. The device can be placed near a SATA connector on the motherboard to overcome board losses and guarantee SATA compliance. The device is SATA specification version 3.0 (gold standard) compliant and can also be pin configured for SATA specification version 2.6 (gold standard) compliance.

The device features hardware SATA-drive cable detection that automatically places the device into a standby mode that consumes less than  $20\mu\text{A}$  (typ) standby current when no drive is connected. In addition, the device features an independent channel dynamic power-down mode where power consumption is reduced when no input signal is present. The device maintains output common-mode levels to meet internal SATA version 3.0 standards and prevent delays when coming out of low-power mode.

The device preserves signal integrity at the receiver by reestablishing full output levels and reducing the total system jitter ( $T_j$ ) by providing equalization. The device features channel-independent digital preemphasis controls to drive SATA outputs over longer trace lengths to meet internal SATA specifications. SATA out-of-band (OOB) signaling is supported using high-speed out-of-band signal detection on the inputs, and squelch on the corresponding outputs. Inputs and outputs are all internally  $50\Omega$  terminated and must be AC-coupled to the SATA controller IC and SATA device.

The device operates from a single  $+3.3\text{V}$  (typ) supply, is available in a small,  $4\text{mm} \times 4\text{mm}$  TQFN package with flow-through traces for ease of layout, and is specified over the extended  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$  operating temperature range.

## Benefits and Features

- Robust Solution for Harsh Environments
  - Extended Temp Rating:  $-40^\circ\text{C}$  to  $+85^\circ\text{C}$
  - High ESD Protection on All Pins:  $\pm 8\text{kV}$  (HBM)
  - TQFN ( $4\text{mm} \times 4\text{mm}$ ) Package for Resistance to Vibration/Shocks
- Unique Power-Saving Design
  - Standby State:  $<1\text{mW}$  (typ)
  - Dynamic Power-Down State
    - Idle State:  $52.8\text{mW}$  (typ)
    - Active State:  $231\text{mW}$  (typ)
- Design Flexibility
  - Input Equalization and Selectable Output Preemphasis
  - Single  $3.3\text{V}$  Supply Operation
  - SATA 3i ( $6.0\text{Gbps}$ ), SATA 2i/2m ( $3.0\text{Gbps}$ ), and SATA 1i/1m ( $1.5\text{Gbps}$ ) Compatible

## Applications

- Industrial/Embedded PC
- Portable IPC/HMI
- Industrial Server
- Medical
- SATA SSDs or HDDs

**Note 3:** All devices are 100% production tested at  $T_A = +85^\circ C$ . Specifications over the operating temperature range are guaranteed by design.

**Note 4:** This specification meets SATA version 3.0 (gold standard).

**Note 5:** Guaranteed by design.

**Note 6:** This specification meets SATA version 2.6 (gold standard).

**Note 7:** Rise and fall times are measured using 20% and 80% levels.

**Note 8:** DJ measured using K28.5 pattern; RJ measured using D10.2 pattern.

**Note 9:** Total time for OOB detection circuit to enable/squelch the output.

**Note 10:** Difference between squelched and not squelched in the active mode.

**Note 11:** Difference between output common mode in the active and dynamic power-down state.

Typical Operating Characteristics

(V<sub>CC</sub> = +3.3V, T<sub>A</sub> = +25°C, all eye diagrams measured using K28.5 pattern, unless otherwise noted.)

Typical Operating Characteristics (continued)

( $V_{CC} = +3.3V$ ,  $T_A = +25^\circ C$ , all eye diagrams measured using K28.5 pattern, unless otherwise noted.)

Pin Configuration

Pin Description

PIN	NAME	FUNCTION
1	AINP	Noninverting Input, Channel A
2	AINM	Inverting Input, Channel A
3, 13, 17	GND	Ground
4	BOUTM	Inverting Output, Channel B
5	BOUTP	Noninverting Output, Channel B
6, 10, 16, 20	V <sub>CC</sub>	Positive Supply Voltage Input. Bypass V <sub>CC</sub> to GND with 1μF and 0.01μF capacitors in parallel as close as possible to the device.
7	EN	Active-High Enable Input. Drive EN low to put the device in standby mode. Drive EN high for normal operation. EN has a 390kΩ (typ) pulldown resistor.
8	PB	Channel B Preemphasis-Enable Input. Drive PB high to enable channel B output preemphasis. Drive PB low for standard SATA output level. PB has a 390kΩ (typ) pulldown resistor.

PIN	NAME	FUNCTION
9	PA	Channel A Preemphasis-Enable Input. Drive PA high to enable channel A output preemphasis. Drive PA low for standard SATA output level. PA has a 390kΩ (typ) pulldown resistor.
11	BINP	Noninverting Input, Channel B
12	BINM	Inverting Input, Channel B
14	AOUTM	Inverting Output, Channel A
15	AOUTP	Noninverting Output, Channel A
18	CAD	Active-Low Cable-Detect Input. For external SATA applications, drive CAD high to put the device in standby mode. Drive CAD low for normal operation. CAD has a 390kΩ (typ) pullup resistor. For internal SATA applications, connect CAD to ground.
19	MODE	OOB Threshold Level Set. MODE has a 390kΩ (typ) pulldown resistor.
—	EP	Exposed Pad. Internally connected to GND. EP must be electrically connected to a ground plane for proper thermal and electrical operation.

Functional Diagram/Truth Table

MODE	VOOB_TH_LOW (mVp-p)	VOOB_TH_HIGH (mVp-p)
0	75	200
1	50	150

EN	PA	PB	CHANNEL A	CHANNEL B
0	X	X	STANDBY	STANDBY
1	0	0	STANDARD SATA	STANDARD SATA
1	1	0	PREEMPHASIS	STANDARD SATA
1	0	1	STANDARD SATA	PREEMPHASIS
1	1	1	PREEMPHASIS	PREEMPHASIS

EN	$\overline{\text{CAD}}$	STATUS
0	0	LOW-POWER STANDBY
0	1	LOW-POWER STANDBY
1	0	ACTIVE
1	1	LOW-POWER STANDBY

**NOTE:** PA, PB, EN, AND MODE HAVE A 390kΩ RESISTOR PULLDOWN TO GND. CAD HAS A 390kΩ RESISTOR PULLUP TO V<sub>CC</sub>. X = DON'T CARE.

Detailed Description

The MAX14970 consists of two identical buffers that take SATA input signals and return them to full SATA compliant output levels. Each buffer includes an equalizer, a limiting amplifier, and an output driver with preemphasis. The buffer outputs are protected from high-voltage electrostatic discharge (ESD) to ±8kV Human Body Model (HBM).

Input/Output Terminations

Inputs and outputs are internally 50Ω terminated and must be AC-coupled to the SATA controller IC and SATA device for proper operation.

OOB Signal Detection

The device provides full OOB signal support through high-speed, OOB-detection circuitry. SATA OOB differential input signals of V<sub>OOB\_TH\_LOW</sub> or less are detected as off and are not passed to the output. This prevents the system from responding to unwanted noise. SATA OOB

differential input signals of V<sub>OOB\_TH\_HIGH</sub> or more are detected as on and passed to the output. This allows OOB signals to transmit through the device. The time for the OOB detection circuit to detect an inactive SATA OOB input and squelch the associated output, or detect an active SATA OOB input and enable the output, is 3ns (typ). The MODE pin can be used to program the OOB detection range. When MODE = GND, the SATA version 3.0 range is used. When MODE = V<sub>CC</sub>, the SATA version 2.6 range is used.

Enable Input

The device features an active-high enable input (EN). EN has an internal pulldown resistor of 390kΩ (typ). Drive EN low or leave unconnected to place the device into low-power standby mode. In standby, the buffers are disabled, reducing the supply current to 20μA (typ). Drive EN high for normal operation.

**Cable-Detect Input**

The device features an active-low, cable-detect input ( $\overline{\text{CAD}}$ ) for use in external SATA applications.  $\overline{\text{CAD}}$  has an internal 390k $\Omega$  (typ) pullup resistor. Drive  $\overline{\text{CAD}}$  high or leave unconnected to place the device into low-power standby mode. In this mode, the buffers are disabled, reducing supply current to 20 $\mu\text{A}$  (typ). This signal is normally driven low by attaching a SATA cable into a properly wired socket (see [Figure 4](#)). If the cable-detect feature is not desired, connect  $\overline{\text{CAD}}$  to GND.

**Dynamic Power-Down Mode**

The device features a dynamic power-down mode where the device shuts down the major power-consuming circuitry. The device detects if the input signal is not present for a 4 $\mu\text{s}$  (typ) duration. Normal operation resumes after 20ns (max) when a signal above the OOB threshold level is detected at the input. This function is implemented separately for both channels. The output common mode remains virtually unchanged when entering or exiting

dynamic power-down mode, making the device ideal for internal SATA applications.

**Output Preemphasis Selection Inputs**

The device has two preemphasis control-logic inputs, PA and PB. PA and PB have internal 390k $\Omega$  (typ) pulldown resistors. PA and PB enable preemphasis to the outputs of their corresponding buffers (see the [Functional Diagram/Truth Table](#)). Drive PA or PB low or leave unconnected for standard SATA output levels. Drive PA or PB high to provide preemphasis to the output. The preemphasis output signal compensates for attenuation from longer trace lengths or to meet internal SATA specifications.

**Applications Information**

[Figure 1](#) shows a typical application circuit with the MAX14970 used to drive an internal SATA SDD or HDD. [Figure 4](#) shows a typical application circuit with the MAX14970 used to drive an external SATA SSD or HDD.

Figure 1. Typical Application Circuit for Internal SATA Applications

**Exposed-Pad Package**

The exposed-pad, 20-pin TQFN package incorporates features that provide a very low-thermal resistance path for heat removal from the device. The exposed pad on the device must be soldered to GND for proper thermal and electrical performance. For more information on exposed-pad packages, refer to [Application Note 862: HFAN-08.1: Thermal Considerations of QFN and Other Exposed-Paddle Packages](#).

**Layout**

Use controlled-impedance transmission lines to interface with the device’s high-speed inputs and outputs. Place power-supply decoupling capacitors as close as possible to the V<sub>CC</sub> pin.

**Power-Supply Sequencing**

**Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the device.**

Proper power-supply sequencing is recommended for all devices. Always apply V<sub>CC</sub> before applying signals, especially if the signal is not current limited.

**ESD Protection**

As with all Maxim Integrated devices, ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The MAX14970 is protected against ESD events up to ±8kV (HBM). The ESD structures withstand ±8kV in all states: normal operation and powered down. After an ESD event, the device continues to function without latchup.

**HBM**

The device is rated for ±8kV ESD protection using the HBM (MIL-STD-883, Method 3015). [Figure 2](#) shows the HBM voltage, and [Figure 3](#) shows the current waveform it generates when discharged into a low-impedance state. This model consists of a 100pF capacitor charged to the ESD voltage of interest that is then discharged into the device through a 1.5kΩ resistor.

### Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
