

Description

The [XR33180](#), [XR33181](#), [XR33183](#) and [XR33184](#) are high performance RS-485/RS-422 receivers designed to meet the increasing system requirements found in today's high performance serial communication applications.

The receiver includes enhanced failsafe circuitry, guaranteeing a logic-high receiver output when the receiver inputs are open, shorted, or undriven. The XR33180/81/83/84 (XR3318x) receiver input impedance is at least $48\text{k}\Omega$ (1/4 unit load), allowing more than 128 devices on the bus. The bus pins are ESD protected and pass IEC61000 level 4 ($\pm 15\text{kV}$).

This is a wide supply (3.0V to 5.5V) device that operates at a maximum data rate of 52Mbps and comes in very small 5-pin and 6-pin TSOT23 packages, making this standalone receiver ideal for high speed point-to-point RS-485 applications where space is a concern.

The XR3318x offers several pinout options to maximize performance in different applications while maintaining a minimum pin count. The XR33180 is available in a 5-pin TSOT23 package with the receiver always enabled. The XR33181 is available in a 6-pin TSOT23 package and offers a active high receiver enable pin while the XR33183 has the same pinout but with active low enable pin. The XR33184 is available in a 6-pin TSOT23 package with a I/O logic supply pin to ease the interface to MCU's or FPGA's that run off of different supply voltages. The V_L supply pin allows the XR33184 to interface to other devices running off of supplies from ranging from 1.65V to V_{CC} .

All XR3318x options operate up to a max data rate of 52Mbps, and have excellent propagation delay and skew characteristics making them a good choice for clock fanout or clock distribution systems.

Typical Application

Figure 1. Typical Application

FEATURES

- Max 52Mbps data rate
- Wide 3.0V to 5.5V supply operation
- Robust Electrostatic Discharge (ESD) protection for RS-485 bus pins
 - $\pm 15\text{kV}$ human body model
 - $\pm 15\text{kV}$ IEC61000-4-2 air discharge
 - $\pm 8\text{kV}$ IEC61000-4-2 contact discharge
- Enhanced receiver failsafe protection for open, shorted, or terminated but idle data lines
- -40°C to 125°C ambient operating temperature range
- Lead-free (RoHS 6) TSOT23-5 and TSOT23-6 packaging
- Absolute minimum pin count option, XR33180 (5-pin TSOT23)
- Tri-state RO options, XR33181 and XR33183
- Adjustable I/O supply option to help interfacing to lower voltage logic, XR33184

APPLICATIONS

- Clock distribution
- Robotic control
- Space constrained systems
- Security camera networks
- Industrial and process control equipment

Absolute Maximum Ratings

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Maximum Rating condition for extended periods may affect device reliability and lifetime.

Supply voltage (V_{CC}) -0.3V to 7.0V

Junction temperature 150°C

Input Voltages

EN and \overline{EN} -0.3V to 7.0V

Output Voltage

RO (XR33180/81/83) -0.3V to ($V_{CC} + 0.3V$)

RO (XR33184) -0.3V to ($V_L + 0.3V$)

Receiver Input Voltages

A, B $\pm 18V$

Transient voltage pulse, through $100\Omega^{(1)}$ $\pm 100V$

ESD Ratings

HBM - Human Body Model (A and B pins) $\pm 15kV$

HBM - Human Body Model (all other pins) $\pm 4kV$

IEC61000-4-2 Air Gap Discharge $\pm 15kV$

IEC61000-4-2 Contact Discharge $\pm 8kV$

NOTE:

1. Refer to Figure 3.

Operating Conditions

Operating temperature range -40°C to 125°C

V_{CC} supply range 3.0V to 5.5V

Thermal Information

5-pin TSOT23 θ_{JA} 185.5°C/W

5-pin TSOT23 θ_{JC} 61.6°C/W

6-pin TSOT23 θ_{JA} 167.3°C/W

6-pin TSOT23 θ_{JC} 61.6°C/W

Electrical Characteristics

Specifications are at $T_A = 25^\circ C$, $V_{CC} = 3.0V$ to $5.5V$ unless otherwise noted. Typical values represent the most likely parametric norm at $T_A = 25^\circ C$, and are provided for reference purposes only.

| Symbol | Parameter | Conditions | Min | Typ | Max | Units |
|------------------------------------|--|--|------|------|----------|------------|
| Supply | | | | | | |
| V_{CC} | Supply voltage range | | 3.0 | | 5.5 | V |
| V_L | I/O supply voltage range | $V_L \leq V_{CC}$ | 1.65 | | V_{CC} | V |
| I_{CC} | Supply current | No Load, XR33180/81/83/84 | | 2.5 | 5 | mA |
| I_L | I/O supply | No Load, XR33184 | | | 10 | μA |
| Receiver DC Characteristics | | | | | | |
| V_{TH} | Receiver differential threshold voltage, $V_A - V_B$ | $-7V \leq V_{CM} \leq 12V$ | -200 | -125 | -50 | mV |
| ΔV_{OH} | Receiver input hysteresis | $V_{CM} = 0V$ | | 25 | | mV |
| R_{IN} | Receiver input resistance | $-7V \leq V_{CM} \leq 12V$ | 48 | | | k Ω |
| $I_{A,B}$ | Input current, A and B | $V_{OUT} = 12V, V_{CC} = 0V$ or $5.5V$ | | | 250 | μA |
| | | $V_{OUT} = -7V, V_{CC} = 0V$ or $5.5V$ | -200 | | | μA |

Electrical Characteristics

Specifications are at $T_A = 25^\circ\text{C}$, $V_{CC} = 3.0\text{V}$ to 5.5V unless otherwise noted. Typical values represent the most likely parametric norm at $T_A = 25^\circ\text{C}$, and are provided for reference purposes only.

| Symbol | Parameter | Conditions | Min | Typ | Max | Units |
|-----------------------------|---|--|----------------|-----|-----|------------------|
| Logic Inputs/Outputs | | | | | | |
| V_{IH} | Logic high input thresholds, EN and \overline{EN} | XR33181/83 | 2 | | | V |
| V_{IL} | Logic low input thresholds, EN and \overline{EN} | XR33181/83 | | | 0.4 | V |
| I_{ENLEAK} | Enable pin leakage | XR33181/83 | -10 | | 10 | μA |
| V_{OH} | Receiver output high voltage, RO | $I_{OUT} = -4\text{mA}$, XR33180/81/83 | $V_{CC} - 0.4$ | | | V |

Applications Information (Continued)

The XR3318x RS-485/RS-422 device is part of MaxLinear's high performance serial interface product line. The analog bus pins can survive direct shorts up to $\pm 18V$ and are protected against ESD events up to $\pm 15kV$.

Enhanced Failsafe

Ordinary RS-485 differential receivers will be in an indeterminate state whenever the data bus is not being actively driven. The enhanced failsafe feature of the XR3318x guarantees a logic-high receiver output when the receiver inputs are open, shorted or when they are connected to a terminated transmission line with all drivers disabled. In a terminated bus with all transmitters disabled, the receivers' differential input voltage is pulled to 0V by the termination. The XR3318x interprets 0V differential as a logic high with a minimum 50mV noise margin while maintaining compliance with the RS-485 standard of $\pm 200mV$. Although the XR3318x does not need failsafe biasing resistors, it can operate without issue if biasing is used.

$\pm 15kV$ ESD Protection

ESD protection structures are incorporated on all pins to protect against electrostatic discharges encountered during handling and assembly. The receiver inputs of the XR3318x have extra protection against static electricity. MaxLinear uses state-of-the-art structures to protect these pins against ESD of $\pm 15kV$ without damage. The ESD structures withstand high ESD in all states: normal operation and powered down. After an ESD event, the XR3318x keeps operating without latch-up or damage.

ESD protection can be tested in various ways. The receiver inputs of the XR3318x are characterized for protection to the following limits:

- $\pm 15kV$ HBM (Human Body Model), bus pins
- $\pm 15kV$ IEC 61000-4-2 air discharge, bus pins
- $\pm 8kV$ IEC 61000-4-2 contact discharge, bus pins
- $\pm 4kV$ using the Human Body Model, all other pins

ESD Test Conditions

ESD performance depends on a variety of conditions. Contact MaxLinear for a reliability report that documents test setup, methodology and results.

Maximum Number of Receivers on the Bus

The standard RS-485 receiver input impedance is $12k\Omega$ (1 unit load). A standard driver can drive up to 32 unit loads. The XR3318x receiver has a 1/4th unit load receiver input impedance of $48K\Omega$, allowing up to 128 receivers to be connected in parallel on a communication line. Any combination of the XR33180/81/83/84's and other RS-485 receivers up to a total of 32 unit loads may be connected to the line.

Product Selector Guide

| Part Number | Data Rate | Receiver Enable | Nodes On Bus | V_L Pin | Package |
|-------------|-----------|-------------------|--------------|-----------|--------------|
| XR33180 | 52Mbps | No | 128 | No | 5-pin TSOT23 |
| XR33181 | | Yes (active high) | | No | 6-pin TSOT23 |
| XR33183 | | Yes (active low) | | No | |
| XR33184 | | No | | Yes | |

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
