Overview

Overview

The RS9110-N-11-03 module is a complete IEEE 802.11abgn Wi-Fi client device with an integrated MAC, Baseband processor, RF transceiver with power amplifier, and diplexer, T/R switch front-end components. Based on the Redpine Signals RS9110-LI MAC/BBP chip the module provides a complete end-to-end solution for low-power WLAN applications. It includes a multi-threaded processor and a rich set of peripheral interfaces. It can connect to a host processor through SDIO and SPI interfaces.

Applications:

- VOIP handsets
- Interactive remote control devices
- Industrial automation and telemetry
- MP3 music and MP4 video players
- Digital cameras and camcorders

Device Features:

- Conforms to IEEE 802.11a/b/g/e/i/h/j standards, single-stream 802.11 n
- 802.11n MAC features for high user throughput
- 802.11n Space Time Block Code (STBC) support for extended range and higher throughput
- Host interface through SDIO and SPI
- Bluetooth coexistence
- Integrated multi-threaded processor
- TCP checksum offloading
- Rich set of peripherals – UART, SPI, I2C, GPIO, and timers
- 2.4/5 GHz, 802.11n RF transceiver with power amplifier
- Provision for antenna diversity
- Complete WLAN software along with host driver for Windows Embedded CE, Windows XP, and Linux OS
- Single supply 3.1 to 3.6 V operation

1: Detailed Feature List

1.1: Host Interfaces

- SDIO
 - Version 2.0-compatible
 - Supports SD-SPI, 1-bit, and 4-bit SDIO modes
 - Operation up to a maximum clock speed of 50 MHz
- SPI Interface
 - Operation up to a maximum clock speed of 75 MHz

1.2: WLAN

1.2.1: MAC

- Conforms to IEEE 802.11a/b/g/n/e/i/h/j standards for MAC¹
- Dynamic selection of fragment threshold, data rate, and antenna depending on the channel statistics
- Hardware accelerators for WEP 64/128-bit and AES
- WPA, WPA2, WPA2-Enterprise, Voice Personal, WPS (PIN/PBC),
- WMM and WMM-PS support
- AMPDU and AMSDU aggregation for high performance
- Firmware downloaded from host based on application

1.2.2: Baseband Processing

- Supports DSSS (1, 2 Mbps) and CCK (5.5, 11 Mbps) modes
- Supports all OFDM data rates (6, 9, 12, 18, 24, 36, 48, and 54 Mbps)
- Supports IEEE 802.11n single-stream modes with data rates up to 65 Mbps
- Supports long, short, and HT preamble modes
- High-performance multipath compensation in OFDM, DSSS, and CCK modes
- Antenna selection diversity – choice of antenna for transmission and reception; or possibility of providing for separate antennas for 2.4 GHz and 5 GHz bands

1.2.3: RF Transceiver

- Highly integrated 2.4 GHz/5 GHz transceiver with direct conversion architecture
- Receiver with 34 dB RF selectable gain range and 60 dB baseband variable gain range
- Power amplifier with 19 dBm maximum output power.

¹ Compliance to Inter-operability specifications based on the standard

- Integrated LNA, BPF, and T/R switch

1.3: Multi-Threaded Processor

- RISC-based pipelined architecture
- Non-blocking thread operation
- Processing capability of up to 118 million instructions per second (MIPS) at 118 MHz

1.4: Peripherals

- I2C interface with support for multiple masters and high-speed mode
- SPI peripheral interface
- UART interface with programmable baud-rate generator
- GPIO interface

1.5: Coexistence

- Flexible BT coexistence mechanism with 3-wire hardware interface

1.6: Software

- Drivers for Windows Embedded CE, Windows XP ,Windows 7 ,Android and Linux
- Control and management GUI
- Embedded software for complete WLAN functionality including 802.11n aggregation and Block-ACK, auto rate adaptation, security, and QoS modes

1.7: Compliance and Certification

- Reference design certified for Wi-Fi 802.11n, WPA, WPA2, WPA2-Enterprise, WMM, WMM-PS, WPS, Voice-Personal
- RoHS (Restriction of Hazardous Substances) compliant

2: Package Description

2.1: Top View

Figure 1: Top View of the Module

2.2: Bottom View

Figure 2: Bottom View of the Module

2.3: Package Dimensions

Note: Module height is 3.45 mm with $\pm 5\%$ tolerance.

2.4: Recommended Reflow Profile

Figure 3: Reflow Profile

Note: The profile shown is based on SAC 305 solder (3% silver, 0.5% copper). We recommend the ALPHA OM-338 lead-free solder paste. This profile is provided mainly for guidance. The total dwell time depends on the thermal mass of the assembled board and the sensitivity of the components on it.

2.5: Baking Instructions

The RS9110-N-11-03 package is moisture sensitive and devices must be handled appropriately. After the devices are removed from their vacuum sealed packs, they should be taken through reflow for board assembly within 168 hours at room conditions, or stored at under 10% relative humidity. If these conditions are not met, the devices must be baked before reflow. The recommended baking time is nine hours at 125° C.

3: Pin Description

3.1: Module Pinout

Figure 4: Pinout of the Module

3.2: Pin Description

| Pin No. | Pin Name | Pin Type | Description |
|---------|----------|----------|-------------|
| 1) | GND | Ground | Ground |

| | | | |
|-----|---------------------|-------|--|
| 2) | SDIO_DATA2/SPI_INTR | Inout | SDIO 4-bit: Data [2]/Read wait SDIO 1-bit: Read wait SDIO-SPI: SPI_DOUT SPI: SPI_INT ² |
| 3) | SDIO_DATA3 | Inout | SDIO 4-bit: Data [3] SDIO 1-bit: Reserved SDIO-SPI: SPI_INT SPI: Reserved |
| 4) | SDIO_CMD/SPI_CS | Input | SDIO 4-bit: Command/Response SDIO 1-bit: Command SDIO-SPI: SPI_CS SPI: SPI_CS |
| 5) | UART1_RTS | Inout | UART Port1 RTS. This is a firmware configured GPIO pin. Where not used, it should be left open. The default firmware does not use this pin. |
| 6) | UART1_CTS | Inout | UART Port1 CTS. This is a firmware configured GPIO pin. Where not used, it should be left open. The default firmware does not use this pin. |
| 7) | UART2_OUT | Inout | UART Port2 output. This is a firmware configured GPIO pin. Where not used, it should be left open. The default firmware does not use this pin. |
| 8) | UART1_IN | Inout | UART Port1 input. This is a firmware configured GPIO pin. Where not used, it should be left open. The default firmware does not use this pin. |
| 9) | UART1_OUT | Inout | UART Port1 output. This is a firmware configured GPIO pin. Where not used, it should be left open. The default firmware does not use this pin. |
| 10) | TCK | Input | This is a JTAG input pin, and recommended to be connected to ground. |
| 11) | TMS | Input | This is a JTAG input pin, and recommended to be connected to |

² SPI_INT is used to raise an interrupt, level triggered active_high, upon events in the chip pertaining to SPI host interface.

| | | | |
|-----|--------------|---------------|---|
| | | | ground. |
| 12) | TDI | Input | This is a JTAG input pin, and recommended to be connected to ground. |
| 13) | TDO | Output | This is a JTAG output pin, and recommended to be left open. |
| 14) | I2C_SDA | Inout | I2C Bus Data. By default, and unless firmware is modified, this line is programmed as an output and should be left open. |
| 15) | I2C_SCL | Inout | I2C Bus Clock. By default, and unless firmware is modified, this line is programmed as an output and should be left open. |
| 16) | GND | Ground | Ground |
| 17) | DVDD33 | Power | 3.3 Volts Input to the I/O Rail |
| 18) | NC | Not Connected | Should be left open |
| 19) | SLEEP_CLK_IN | Inout | Sleep clock input is NC for default firmware. An external 32KHz signal is fed to this pin if the external 32KHz input mode is selected. Please refer to notes on Sleep Clock Input for more details. |
| 20) | WLAN_ACTIVE | Inout | When configured for BT coexistence, this is an output and indicates with logic high that WLAN activity is in progress. When low, BT device has the opportunity to transmit. This is a firmware configured GPIO pin. Where not used, it should be left open. |
| 21) | BT_PRIORITY | Inout | Indicates through 'logic high' that BT is transmitting high priority traffic. This is a firmware configured GPIO pin. Where not used, it should be left open. |
| 22) | BT_ACTIVE | Inout | This signal may be used by an external Bluetooth device to indicate its activity or impending activity. This signal is not used in the default BT coexistence firmware. . This is a firmware |

| | | | |
|-----|--------------|------------|---|
| | | | configured GPIO pin. Where not used, it should be left open. |
| 23) | XTAL_EN | Output | This signal controls an external reference clock oscillator for power-save purposes. 1 - Enable 0 - Disable |
| 24) | VINBCKDC | Power | 3.3 Volts input to the Lite-Fi's PMU |
| 25) | RF_OUT2 | RFin/RFOut | Antenna-2 port. 50 ohms impedance. |
| 26) | RF_OUT1 | Rfin/Rfout | Antenna-1 Port. 50 ohms impedance |
| 27) | GND | Ground | Ground |
| 28) | NC | No-connect | This pin is to be left unconnected. |
| 29) | GND | Ground | Ground |
| 30) | GND | Ground | Ground |
| 31) | NC | No-connect | This pin is to be left unconnected. |
| 32) | VOUTBCKDC1P3 | Power | Internal DC-DC convertor output. A Schottky diode is to be placed on this line for protection. |
| 33) | FBDC1P3 | Power | Feedback for the DC-DC Converter |
| 34) | PSPI_CLK | Inout | When enabled as a SPI interface pin, this is the SPI Master clock output. This is a firmware configured GPIO pin. Where not used, it should be left open. Default firmware does not use this pin. |
| 35) | PSPI_MISO | Inout | When enabled as a SPI interface pin, this is the SPI Master data input. This is a firmware configured GPIO pin . Where not used, it should be left open. Default firmware does not use this pin. |
| 36) | PSPI_MOSI | Inout | When enabled as a SPI interface pin, this is the SPI Master data output. This is a firmware configured GPIO pin. Where not used, it should be left open. Default firmware does not use this pin |
| 37) | PSPI_CSN1 | Output | When enabled as a SPI interface |

| | | | |
|-----|--------------|--------|--|
| | | | pin, this is the chip-select output from SPI Master. This is a firmware configured GPIO pin. Where not used, it should be left open. Default firmware does not use this pin |
| 38) | VINLDOP123 | Power | Input to the LDO's. This has to be connected to FBDC1P3. |
| 39) | VRF33 | Power | 3.3 Volts input to the RF transceiver |
| 40) | VRF33 | Power | 3.3 Volts input to the RF transceiver |
| 41) | UART2_IN | Inout | UART-2 Input. This is a firmware configured GPIO pin. Where not used, it should be left open. |
| 42) | LED_ON | Inout | LED Control signal. Indicates activity on WLAN – the device pulls this line low when the module is activated. To be connected to the Cathode of an LED with a recommended series resistor of 820 ohms to VDD. This pin may also be used as a GPIO. |
| 43) | RESET_n | Input | Power on reset. Active low, and required to be active for at least 10 ms. |
| 44) | REF_CLK | Input | Reference Clock source: 40MHz. |
| 45) | GND | Ground | Ground |
| 46) | GND | Ground | Ground |
| 47) | EXT_LDO28 | Power | 2.8 Volts LDO O/P |
| 48) | MODE_SEL_1 | Input | SDIO MODE: No connect. SPI Mode: Connect pull down of 4.7Kohms. |
| 49) | MODE_SEL_0 | Input | BOOT MODE: On no-connect, boot parameters will be loaded from internal flash. Should be left unconnected so as to enable bootloading. |
| 50) | SLEEP_CLK_X2 | Input | 32KHz crystal connection The pin should be left open except as describe in mode (iii) as described in note below for Sleep Clock Input. |
| 51) | SLEEP_CLK_X1 | Input | 32KHz crystal connection The pin should be left grounded |

| | | | |
|-----|------------------|--------|---|
| | | | except as describe in mode (iii) as described in note below for Sleep Clock Input. |
| 52) | GND | Ground | Ground |
| 53) | GPIO_1 | Inout | General purpose input/output. In the default configuration this is programmed as an output and should be left unconnected. |
| 54) | XTAL_EN_IP | Inout | This is a GPIO signal by default and it should be left open. If used, it can be configured through firmware to be combined, through a logical OR operation, with the internal oscillator enable and the output given on XTAL_EN pin. This can be used when a crystal oscillator is shared between the WLAN module and other functional blocks in the system. |
| 55) | HOST_WAKEUP_INT | Inout | This pin is a GPIO. If this is not used, it should be left open. This pin is to be used by those hosts which enter into power save mode and which are not able to detect the regular interrupt pin in that power save mode. If used as HOST_WAKEUP_INT, a pull-up or pull-down of 100K has to be connected on this pin based on the polarity indicated to the firmware. Active low requires a pull-up. Active high requires a pull-down. |
| 56) | SDIO_DATA0/MOSI | Inout | SDIO 4-bit: Data [0] SDIO 1-bit: Data line SDIO-SPI: SPI_DIN (MOSI) SPI: SPI_DIN |
| 57) | SDIO_DATA1/MISO | Inout | SDIO 4-bit: Data [1]/Interrupt SDIO 1-bit: Interrupt SDIO-SPI: Reserved SPI: SPI_DOUT |
| 58) | SDIO_CLK/SPI_CLK | Input | SDIO/SPI interface clock input |

Notes:

- Some interfaces are not used in the default configuration or mode of operation. These include the I2C, GPIO, and UART interfaces. These may be used in custom applications with appropriate firmware. These are all fundamentally Inout signals and may be configured either as input or output.
- JTAG functionality is not included in default firmware.
- The Bluetooth coexistence interface (BT_PRIORITY, WLAN_ACTIVE, BT_ACTIVE) are also general purpose I/O signals and may be reprogrammed to be inputs or outputs as needed. Please refer to BT coexistence application note for more details.
- Sleep Clock Input:

By default, an internal 32KHz oscillator is used, so this pin can be open.

This should be a 32 kHz clock and is used in power-save modes, if chosen.

During the low power sleep state, the module's wake-up timer uses the sleep clock – which can have one of three sources

 - i) an internal 32 kHz oscillator- Default option, leave open
 - ii) a 32 kHz clock fed into this pin,
 - iii) a 32 kHz crystal connected to pins SLEEP_CLK_X2 and SLEEP_CLK_X1. In this case the pin should be left open.

This is a firmware configured GPIO pin and where not used, should be left open.

NOTE: The recommended mode of operation is i).
- Please refer to the Module Integration Guide document for reference schematics and the list of recommended part numbers.
- Please contact Redpine for application notes or for customization of a solution.

4: Electrical Characteristics

4.1: Absolute Maximum Ratings

Absolute maximum ratings in the table given below are the values beyond which the device could be damaged. Functional operation at these conditions or beyond these conditions is not guaranteed.

| Parameter | Symbol | Value | Units |
|---|--------------------|------------|-------|
| Input Supply voltage | V _{in} | 3.6 | V |
| Supply voltage for I/O Rail | DVDD33 | 3.6 | V |
| Supply Voltage for the RF | VRF33 | 3.6 | V |
| RF Input Level | RFIN | 10 | dBm |
| Storage temperature | T _{store} | -65 to 150 | °C |
| PA Output Load Mismatch | | 10:1 | |
| Electrostatic discharge tolerance (MM) | ESD _{MM} | 200 | V |
| Electrostatic discharge tolerance (CDM) | ESD _{CDM} | 500 | V |
| Electrostatic discharge tolerance (HBM) | ESD _{HBM} | 2000 | V |

Table 1: Absolute Maximum Ratings

4.2: Recommended Operating Conditions

| Parameter | Symbol | Min. | Typ. | Max. | Units |
|-----------------------------|-----------------|------|------|------|-------|
| Input supply voltage | V _{IN} | 3.1 | 3.3 | 3.6 | V |
| Supply voltage for I/O Rail | DVDD33 | 3.1 | 3.3 | 3.6 | V |
| Supply voltage for the RF | VRF33 | 3.1 | 3.3 | 3.6 | V |
| Ambient temperature | T _a | -40 | 25 | 85 | °C |

| SDIO_DATA, clock to output delay | Tod | 5.5 | - | 12.5 | ns |

Table 5: AC Characteristics – SDIO Interface High-speed Mode

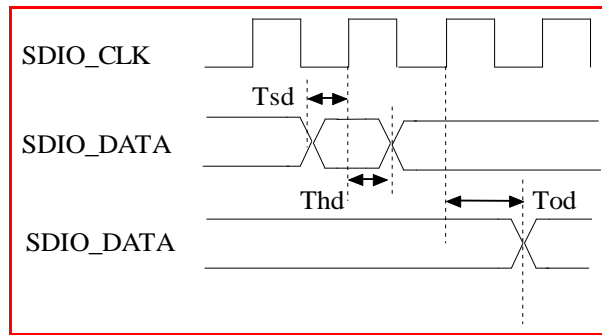

Figure 6: Interface Timings – SDIO Interface High-speed Mode

4.4.2: SPI Interface

The SPI Interface is a full duplex serial host interface, which supports 8-bit and 32-bit data granularity. It also supports gated mode of SPI clock and both the low and the high frequency modes. In case of low frequency host, the data is driven on the falling edge and sampled on the rising edge and hence, it should be ensured that a valid data is present on the bus at the immediate rising edge after the SPI chip select is driven low. For high frequency transmission the data is driven as well as sampled on rising edge.

This interface has the interrupt pin along with the regular signals clock, chip select, data in and data out. Device interrupts the host processor regarding the packet pending event through this interrupt pin. This is an active high signal, and this will get cleared only after clearing the source of the interrupt, i.e. reading the pending packet from device. This will be generally connected to a GPIO pin of host platform and GPIO has to be configured for detecting interrupt on level high, and interrupt from this GPIO has to be mapped to driver ISR.

The SPI Slave supports mode 0 (SPI_POL=0, SPI_PHA=0) and mode 3 (SPI_POL=1, SPI_PHA=1).

Figure 7: SPI Protocol

4.4.2.1: Full Speed Mode

| Parameter | Symbol | Min. | Typ. | Max. | Units |
|--|--------|------|------|------|-------|
| SPI_CLK | Tspi | 0 | | 25 | MHz |
| SPI_CS to output delay | Tcs | 3.5 | - | 7.5 | ns |
| SPI CS to input setup time | Tcst | 5.5 | - | - | |
| SPI_DIN (MOSI), input setup time | Ts | 1 | - | - | ns |
| SPI_DIN (MOSI), input hold time | Th | 1.5 | - | | ns |
| SPI_DOUT (MISO), clock to output delay | Tod | 4 | - | 9 | ns |

| TDO, clock to output valid | Totdo | 0 | - | 14 | Ns |

Table 8: AC Characteristics – JTAG Interface

Figure 10: Interface Timings – JTAG Interface

5: Module Power Consumption

The following is the typical power consumption data for the RS9110-N-11-03 802.11a/b/g/n module. A single point 3.3V supply is used. Transmit power at antenna is 15dBm.

| Mode | Conditions | Module Current |
|---|---|-----------------------|
| Standard Operational Modes – 2.4 GHz | | |
| Data Transfer – Transmit TCP | 1Mbps throughput | 23 mA |
| Data Transfer – Transmit TCP | 2Mbps throughput | 41 mA |
| Data Transfer – Transmit TCP | 22 Mbps throughput | 226 mA |
| Data Transfer – Receive TCP | 1Mbps throughput | 26 mA |
| Data Transfer – Receive TCP | 2Mbps throughput | 57 mA |
| Data Transfer – Receive TCP | 22 Mbps throughput | 174 mA |
| Listen | Receive mode, with no active packet reception in progress | 143 mA |
| Standby | Remaining connected to the Access Point, in Power-Save mode, with DTIM=3, beacon interval of 200 ms | 1.5 mA |
| Sleep | Not connected to an AP; ready to connect upon driver command. The module can transition to any active mode in less than 2.5 ms. | 0.8 mA |
| Standard Operational Modes – 5 GHz | | |
| Data Transfer – Transmit TCP | 1Mbps throughput | 31 mA |
| Data Transfer – Transmit TCP | 2Mbps throughput | 51 mA |
| Data Transfer – Receive TCP | 1Mbps throughput | 23 mA |
| Data Transfer – Receive TCP | 2Mbps throughput | 41 mA |
| Data Transfer – Receive TCP | 22 Mbps throughput | 225 mA |
| Listen | Receive mode, with no active packet reception in progress | 191 mA |
| Standby | Remaining connected to the Access Point, in Power-Save mode, with DTIM=3, beacon | 1.2 mA |

| | | |
|-------|---|--------|
| | interval of 200 ms | |
| Sleep | Not connected to an AP; ready to connect upon driver command. The module can transition to any active mode in less than 2.5 ms. | 0.5 mA |

Note:

1. The current numbers mentioned include the current drawn by the crystal oscillator.
2. Applications where wireless LAN module is inactive for extended periods of time an external power switch can be integrated. This may be used to obtain idle current of less than 5 μ Amp which would be the leakage current of the power switch

6: Performance Specifications

6.1: Wireless Specifications

Note that the transmit power mentioned in the following table varies with data rate and also with the channel of operation for regulatory reasons.

| Feature | Description |
|---|--|
| Frequency Band | 2.400 – 2.500 GHz (Low band) 4.900 – 5.850 GHz (High Band) |
| Frequency Reference | 40 MHz |
| Modulation | OFDM with BPSK, QPSK, 16-QAM, and 64-QAM 802.11b with CCK and DSSS |
| Supported Data Rates | 802.11n: 6.5, 13, 19.5, 26, 39, 52, 58.5, 65 Mbps 802.11a/g: 6, 9, 12, 18, 24, 36, 48, 54 Mbps 802.11b: 1, 2, 5.5, 11 Mbps |
| 802.11n Features | MCS 0-7, STBC, RIFS, Greenfield Protection A-MPDU, A-MSDU Aggregation with Block-ack, PSMP, and MTBA |
| Typical Transmit Power (+/- 2 dBm) `bg` Mode | 17 dBm for 802.11b DSSS 17 dBm for 802.11b CCK 15 dBm for 802.11g/n OFDM |
| Typical Transmit Power (+/- 2 dBm) `a` Mode | 12 dBm |

Table 9: Wireless Specification

6.2: Receive Characteristics

6.2.1: Sensitivity

| Data Rate (bg Mode) | Typical Sensitivity (+/- 1.5 dBm) |
|---------------------|-----------------------------------|
| 1 Mbps | -94.0 dBm (< 8% PER) |
| 2 Mbps | -89.0 dBm (< 8% PER) |
| 11 Mbps | -86.0 dBm (< 8% PER) |
| 6 Mbps | -89.0 dBm (<10% PER) |
| 54 Mbps | -74.0 dBm (< 10% PER) |
| 65 Mbps | -71.0 dBm (< 10% PER) |
| | |
| Data Rate (a Mode) | Typical Sensitivity (+/- 1.5 dBm) |
| 6 Mbps | -88.0 dBm (<10% PER) |
| 54 Mbps | -72.0 dBm (< 10% PER) |

| Data Rate (bg Mode) | Typical Sensitivity (+/- 1.5 dBm) |
|----------------------------|--|
| 65 Mbps | -69.0 dBm (< 10% PER) |

Table 10: Receive Sensitivity

6.3: Standards Compliance

RS9110-N-11-03 is compliant with the requirements of IEEE 802.11b, 802.11g, 802.11a, 802.11j, and 802.11n that include the following:

- Transmit Spectral Mask
- Transmit Center Frequency Leakage
- Transmit Center Frequency Tolerance
- Symbol Clock Frequency Tolerance
- Transmit Constellation error
- Receiver Adjacent Channel Interference Rejection
- Receiver Non-adjacent Channel Rejection
- Receiver Minimum Input Level
- Receiver Maximum Input Level

7: Software Details

The RS9110-N-11-03 provides a zero-host-load system architecture by implementing most of the 802.11 MAC functions in its internal multi-threaded ThreadArch™ processor. The driver consumes less than 5 MIPS from the host processor, thereby giving the freedom to the host processor to run its own applications.

7.1: Architecture

The following diagram depicts the software architecture of the solution.

Figure 11: RS9110-N-11-03 Software Architecture

7.2: Details

This section provides an overview of the functionality of each of the key modules in the WLAN system.

7.2.1: 802.1x Supplicant

- WPA/WPA2-Personal mode functionality
- WPA/WPA2-EAP exchanges for enterprise mode
- Key negotiation and management – WEP, TKIP, and CCMP
- Pre-authentication and PMKSA caching for roaming

7.2.2: Configuration Utility

- It is a user-mode application to manage wireless network
- SSID selection
- Channel and rate selection
- Key management
- Configuration of 802.11 parameters

7.2.3: WLAN Driver

- Consumes < 5 MIPS from host processor
- Initialization module
- Baseband and RF programming
- Firmware downloading
- TCP/IP Network Interface Layer
- Transmission of TCP/IP packets
- Indicating received TCP/IP packets
- 802.11 Station Management Module
- Interaction with HAL layer – SDIO and SPI
- Power-save modes
 - Sleep
 - Standby

7.2.4: HAL- Hardware Abstraction Layer

- HAL layer changes depending on the host interface used
- SPI Interface – SPI host controller driver
- SDIO Interface – SDIO host controller and bus drivers

7.2.5: Upper MAC

- Non-time critical 802.11 MAC functions
- Classification of the packets
- Block-Acknowledgement negotiation
- Power save features
- Transfer of packets from host to LMAC and vice versa

- IPsec off-loading
- RNG – Random Number Generation

7.2.6: Lower MAC

- Time-critical 802.11 MAC functionality
- 802.11 frame formatting
- 802.3 frame to 802.11 conversion and vice-versa
- Beacon processing
- Backoff algorithm
- WEP 64 and 128 bit, WPA/WPA2 encryption and decryption
- Auto rate algorithm
- A-MPDU and A-MSDU aggregation
- Re-transmission
- Fragmentation and reassembly

7.3: OS Support

The Lite-Fi™ family devices including RS9110-N-11-03 support the device drivers and wireless configuration utilities for the following operating systems:

- Windows CE® 5.0 and 6.0
- Linux – 2.6.xx kernel
- Windows XP®
- Android 2.2

8: Ordering Information

8.1: Contact Information

For additional information, please contact Sales at Redpine Signals, Inc.

Redpine Signals, Inc.

2107 North First Street, Suite 680,

San Jose, CA 95131 USA

Phone: +1 408 748 3385

E-mail: sales@redpinesignals.com

Website: <http://www.redpinesignals.com/>

8.2: Device Ordering Information

The following table lists the part numbers to be used for ordering modules or evaluation boards (EVB). The 'xx' in the part numbers indicate a version number – 01, 02, etc., - identifying the version of the custom firmware that is included with the module or EVB. Redpine can create and provide customized firmware based on user requirements.

| Device Number | Description | Packaging | Qualification |
|--------------------|------------------------------------|-----------|---------------|
| RS9110-N-11-03 | Standard Part | Tray | Industrial |
| RS9110-N-11-03-EVB | Evaluation board for standard part | Board | |

8.2.1: Device Packaging

- 60 RS9110-N-11-03 modules per tray
- Each tray has 12 rows and 5 columns
- Tray dimensions 14cm x 32.5cm x 0.8cm (L X W X H)
- The device packaging is MSL-3 compliant

8.3: Collateral

The following documentation and software are available along with the RS9110-N-11-03 module.

- Module Evaluation Board (EVB) with SDIO host interface
- Device driver and configuration software for Windows XP, Windows CE, or Linux³
- Test mode software

³ Please contact Redpine for details of operating systems and processor platforms supported, and for software porting and customization services

- EVB User Guide
- Software Installation Guide
- Wi-Fi Evaluation Procedure Manual
- Module Integration Guide

Document History:

| Rev. | Ver. No. | Date | Changes |
|------|----------|---------------|--|
| 1. | 1.0 | November 2008 | Adapted from -02 module datasheet |
| 2. | 1.1 | January 2009 | Updated with new pinout, reflow profile, etc. |
| 3. | 1.11 | January 2009 | Removed power numbers section as a temporary release |
| 4. | 1.12 | February 2009 | Added module height. Note: power numbers are not added in yet |
| 5. | 1.13 | February 2009 | Modified module height. Modified operating temperature range. |
| 6. | 1.14 | February 2009 | Added missing table headings |
| 7. | 1.15 | March 2009 | Added new logo |
| 8. | 1.16 | June 2009 | Modified the supported Reference frequencies. |
| 9. | 1.17 | Aug 2009 | Modified descriptions of SLEEP_CLK_IN, and XTAL_IP_EN |
| 10. | 1.18 | Sep 2009 | Minimum voltage changed to 3.1V. Allusion to Vout corrected. <i>Pending: Frequency reference list</i> |
| 11. | 1.19 | Sep 2009 | Changed XTAL_IP_EN to XTAL_EN_IP |
| 12. | 1.2 | Oct 2009 | Added RoHS |
| 13. | 1.21 | November 2009 | Removed "draft 2.0" from 11n |
| 14. | 1.22 | Jan 2010 | Removed DRM and Module Test Reports from 'Collateral' section |
| 15. | 1.23 | Feb 2010 | Changed PIN out for SHUTDOWN pin. Modified HOST_WAKEUP_INT, SLEEP_CLK_IN description. |
| 16. | 1.24 | March 2010 | Module height is changed and a note regarding Tx power is added |
| 17. | 1.25 | July 2010 | Added module power consumption section Remove reference clock frequencies Added SPI mode description |
| 18. | 1.26 | November 2010 | Updated with comments from Venkatesh, Subba, Suresh. The comments are same as from RS9110-N-11-02 datasheet. |

**RS9110-N-11-03 802.11abgn WLAN Module
Data Sheet
Version 1.3**

| | | | |
|-----|--------|---------------|---|
| 19. | 1.27 | December 2010 | Updated with comments carried over from RS9110-N-11-02 datasheet. |
| 20. | 1.28 | January 2011 | Updated with the PCB layout diagram. |
| 21. | 1.28.1 | February 2011 | Modified date and sleep_clk_xxx pin description |
| 22. | 1.29 | July 2011 | Added humidity information and OS support for Android |
| 23. | 1.31 | Sep, 2012 | Removed reel from packaging |

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:

105318, г.Москва, ул.Щербаковская д.3, офис 1107, 1118, ДЦ «Щербаковский»
