

Is Now Part of

ON Semiconductor®

**To learn more about ON Semiconductor, please visit our website at
www.onsemi.com**

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FUSB301

Autonomous USB Type-C Controller with Super Speed Switch Control

Features

- Fully Autonomous Type-C Controller
- Supports Type-C Versions 1.1 and 1.0
- V_{DD} Operating Range, 3.0 V- 5.5 V
- Low Disable Power: I_{CC} = 2 µA (Max.)
- Low Standby Power: I_{CC} = 7 µA (Max.)
- Dual Role Port Mode with Optional Accessory Support
- Capable of Supporting Try.SNK and Try.SRC
- Super Speed Switch Control
- Dead Battery Support (Sink Mode Support when No Power Applied)
- 2 kV HBM ESD Protection
- Small Packaging, 10 Lead TMLP (1.6 mm x 1.2 mm x 0.375 mm)

Description

The FUSB301 is a fully autonomous Type-C controller optimized for <15 W applications. The FUSB301 offers CC logic detection for Source Mode, Sink Mode, Dual Role Port Mode, accessory detection support, and dead battery support. The FUSB301 features an external switch pin (SS_SW) to enable an external USB Super Speed Switch without interrupting the processor. The FUSB301 features an extremely low power disable mode as well as low power during normal operation. It is available in an ultra thin, 10-Lead TMLP package.

Applications

- Smartphones
- Tablets
- Notebooks
- Ultra Portable Applications

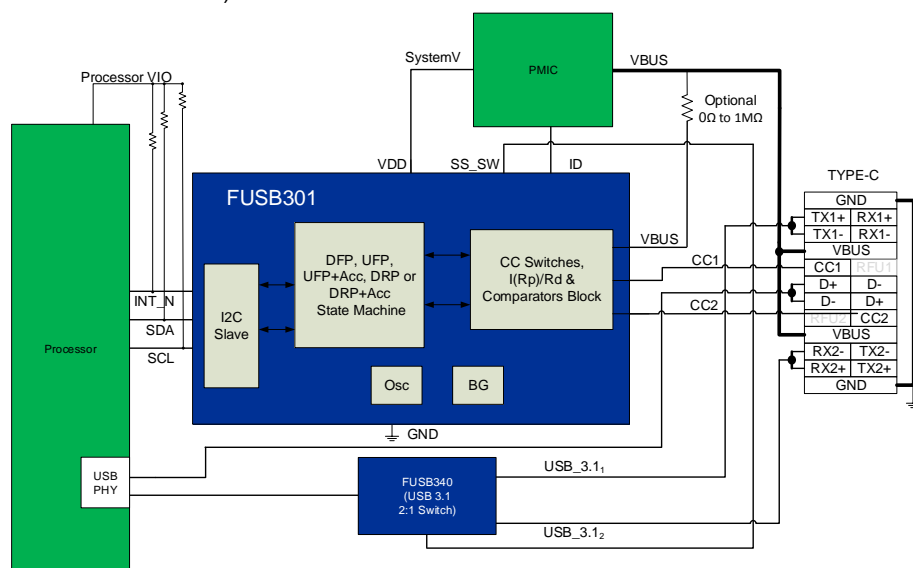

Figure 1. Typical Application

Ordering Information

Pin Configuration

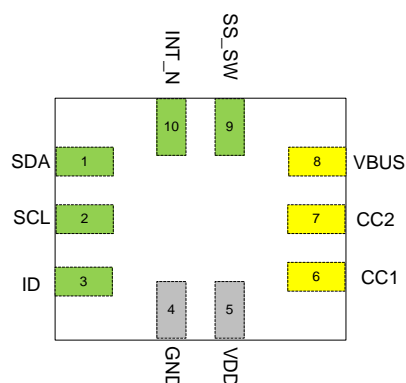

Figure 3. Pin Assignment (Top Through View)

Pin Descriptions

Pin #	Name	Type	Description
USB Type-C Connector Interface			
6, 7	CC1, CC2	I/O	Type-C Configuration Channel
8	VBUS	Input	VBUS input pin for attach and detach detection
4	GND	Ground	Ground
Power Interface			
5	VDD	Power	Input Supply Voltage
Signal Interface			
1	SDA	Input	I ² C serial data signal to be connected to the I ² C master
2	SCL	Open-Drain I/O	I ² C serial clock signal to be connected to the I ² C master.
3	ID	Open Drain Output	Used to Identify if connected device is Source or Sink. The ID Pin can be used to interface with USB2.0 Input on the processor.
9	SS_SW	CMOS Output	External Super Speed Switch control without processor interrupt.
10	INT_N	Open Drain Output	Active Low open drain interrupt output used to prompt processor to read I ² C register bits

Dead Battery

If power is not applied to FUSB301 and it is attached to a Source device, then the Source would pull up the CC line connected through the cable. The FUSB301 in response would turn on the pull-down that will bring the CC voltage to a range that the Source can detect an attach and turn on VBUS.

Power Up, Initialization and Reset, Interrupt Operation

When power is first applied, the FUSB301 will power up in Sink mode with all interrupts masked. The local processor must configure the FUSB301 to the desired mode and clear the global interrupt mask bit, INT_MASK. The INT_N pin is an active low, open drain output. This pin indicates to the host processor that an interrupt has occurred in the FUSB301 which needs attention. The INT_N pin is in a high impedance state by default after power-up or device reset, and the global interrupt mask (INT_MASK in Control register) is set. After INT_MASK bit is cleared by the local processor, the INT_N pin stays high impedance in preparation of

future interrupts. When an interruptible event occurs, INT_N is driven LOW and is in a high impedance state again when the processor clears the interrupt by reading the interrupt registers. Subsequent to the initial power up or reset; if the processor writes a “1” to global interrupt mask bit when the system is already powered up, the INT_N pin stays in a high impedance state and ignores all interrupts until the global interrupt mask bit is cleared. If an event happens that would ordinarily cause an interrupt when the global interrupt mask bit is set, the INT_N pin goes LOW when the global interrupt mask is cleared.

SuperSpeed Switch Control

For applications that require a SuperSpeed USB switch (USB3.1 Gen 1), the SS_SW pin will autonomously control the USB switch, such as the FUSB340TMX, without interrupting the processor.

Table 1. SuperSpeed Switch Truth Table

CC1	CC2	ORIENT1	ORIENT0	SS_SW
Not Connected	Not Connected	0	0	Low
Connected to CC		0	1	Low
	Connected to CC	1	0	High
Not Connected	Not Connected	1	1	Low

Table 2. ID Pin Truth Table

TYPE Register (h12, bit 4)	Description	ID
SINK = b0	SINK Not Detected	Hi-Z (default)
SINK = b1	SINK Detected	Low

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter		Min.	Max.	Unit
V _{DD}	Supply Voltage from V _{DD}		-0.5	6.0	V
V _{BUS}	VBUS Supply Voltage		-0.5	28	V
V _{CC_HDDRP}	CC pins when configured as Host, Device or Dual Role Port		-0.5	6.0	V
T _{STORAGE}	Storage Temperature Range		-65	+150	C
T _J	Maximum Junction Temperature			+150	C
T _L	Lead Temperature (Soldering, 10 Seconds)			+260	C
ESD	IEC 61000-4-2 System ESD	Connector Pins (VBUS, CC1 & CC2)	Air Gap	15	kV
			Contact	8	
	Human Body Model, JEDEC JESD22-A114	Connector Pins (VBUS, CC1 and CC2)		4	kV
		Others		2	
	Charged Device Model, JEDEC LESD22-C101	All Pins		1	

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Typ.	Max.	Unit
V _{BUS}	VBUS Supply Voltage	3.7	5.0	21	V
V _{DD}	Supply Voltage	2.8 ⁽¹⁾	3.3	5.5	V
T _A	Operating Temperature	-40		+85	C

Note:

1. This is for functional operation only and isn't the lowest limit for all subsequent electrical specifications below. All electrical parameters have a minimum of 3 V operation.

DC and Transient Characteristics

Unless otherwise specified: Recommended T_A and T_J temperature ranges. All typical values are at $T_A=25^\circ\text{C}$ and $V_{DD}=3.3\text{ V}$ unless otherwise specified.

Symbol	Parameter	T _A = -40 to +85°C T _J = -40 to +125°C			Unit
		Min.	Typ.	Max.

Fast Mode I2C Specifications (see Figure 4)

Symbol	Parameter	Fast Mode		
		Min.	Max.	Unit
f_{SCL}	I2C_SCL Clock Frequency	0	400	kHz
$t_{HD;STA}$	Hold Time (Repeated) START Condition	0.6		μs
t_{LOW}	LOW Period of I2C_SCL Clock	1.3		μs
t_{HIGH}	HIGH Period of I2C_SCL Clock	0.6		μs
$t_{SU;STA}$	Set-up Time for Repeated START Condition	0.6		μs
$t_{HD;DAT}$	Data Hold Time	0	0.9	μs
$t_{SU;DAT}$	Data Set-up Time ⁽²⁾	100		ns
t_r	Rise Time of I2C_SDA and I2C_SCL Signals ⁽³⁾	$20 \cdot (V_{DD}/5.5 \text{ V})$	250	ns
t_f	Fall Time of I2C_SDA and I2C_SCL Signals ⁽³⁾	$20 \cdot (V_{DD}/5.5 \text{ V})$	250	ns
$t_{SU;STO}$	Set-up Time for STOP Condition	0.6		μs
t_{BUF}	BUS-Free Time between STOP and START Conditions	1.3		μs
t_{SP}	Pulse Width of Spikes that Must Be Suppressed by the Input Filter	0	50	ns

Notes:

2. A fast-mode I²C-bus device can be used in a standard-mode I²C-bus system, but the requirement $t_{SU;DAT} \geq 250 \text{ ns}$ must be met. This is automatically the case if the device does not stretch the LOW period of the I2C_SCL signal. If such a device does stretch the LOW period of the I2C_SCL signal, it must output the next data bit to the I2C_SDA line $t_{r_max} + t_{SU;DAT} = 1000 + 250 = 1250 \text{ ns}$ (according to the standard-mode I2C bus specification) before the I2C_SCL line is released.
3. C_b equals the total capacitance of one bus line in pF. If mixed with high-speed devices, faster fall times are allowed according to the I2C specification.

**Figure 4. Definition of Timing for Full-Speed Mode Devices on the I²C Bus**

I²C Interface

The FUSB301 includes a full I²C slave controller. The I²C slave fully complies with the I²C specification version 6 requirements. This block is designed for fast mode. Examples of an I²C write and read sequence are shown Figure 5 and Figure 6 respectively.

Note: Single Byte read is initiated by Master with P immediately following first data byte

Figure 5. I²C Write Example

Note: If Register is not specified Master will begin read from current register. In this case only sequence showing in Red bracket is needed

	From Master to Slave	S	Start Condition	NA	NOT Acknowledge (SDA High)	RD	Read =1
	From Slave to Master	A	Acknowledge (SDA Low)	WR	Write=0	P	Stop Condition

LAND PATTERN RECOMMENDATION

NOTES:

- NO JEDEC REGISTRATION APPLIES.
- DIMENSIONS ARE IN MILLIMETERS.
- DIMENSIONS AND TOLERANCE PER ASME Y14.5M, 2009.
- PACKAGE NOMINAL HEIGHT IS 370 MICRONS.
- FSC LANDPATTERN RECOMMENDATION
- DRAWING FILENAME: MKT-TMLP10Arev2

ON Semiconductor and  are trademarks of Semiconductor Components Industries, LLC dba ON Semiconductor or its subsidiaries in the United States and/or other countries. ON Semiconductor owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of ON Semiconductor's product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. ON Semiconductor reserves the right to make changes without further notice to any products herein. ON Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does ON Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using ON Semiconductor products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by ON Semiconductor. "Typical" parameters which may be provided in ON Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. ON Semiconductor does not convey any license under its patent rights nor the rights of others. ON Semiconductor products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that ON Semiconductor was negligent regarding the design or manufacture of the part. ON Semiconductor is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
