## HMC ${ }^{\text {TM }}$ PIN Diode SPDT 50 Watt Switch for 0.05 - 6.0 GHz Higher Power Applications

## Features

- Exceptional Broadband Performance, 0.05-6.0 GHz
- Low Loss: $\mathrm{T}_{\mathrm{X}}=0.33 \mathrm{~dB}$ @ $2010 \mathrm{MHz}, 5 \mathrm{~V} / 20 \mathrm{~mA}$
- $\mathrm{T}_{\mathrm{X}}=0.38 \mathrm{~dB} @ 3.5 \mathrm{GHz}, 5 \mathrm{~V} / 20 \mathrm{~mA}$
- High Isolation: $\mathrm{Rx}=44 \mathrm{~dB}$ @ $2010 \mathrm{MHz}, 20 \mathrm{~mA} / 5 \mathrm{~V}$
- $\mathrm{Rx}=36 \mathrm{~dB}$ @ $3.5 \mathrm{GHz}, 20 \mathrm{~mA} / 5 \mathrm{~V}$
- High $\mathrm{T}_{\mathrm{X}}$ RF Input Power = 50 W C.W. @ 2010MHz
- High Tx RF Input Peak Power > 1000 W
- Suitable for Very High Power TD-SCDMA \& WiMAX Applications
- Surface Mount 4mm PQFN Package, RoHS* Compliant

## Description and Applications

The MASW-000834-13560T is a SPDT Broadband, high linearity, common anode, PIN diode T/R switch for 0.05 6.0 GHz applications, including WiMAX \& WiFi. The device is provided in industry standard 4mm PQFN plastic packaging. This device incorporates a PIN diode die fabricated with M/A-COM Technology Solutions patented Silicon-Glass $\mathrm{HMIC}^{\text {TM }}$ process. This chip features two silicon pedestals embedded in a low loss, low dispersion glass. The diodes are formed on the top of each pedestal. The topside is fully encapsulated with silicon nitride and has an additional polymer passivation layer. These polymer protective coatings prevent damage and contamination during handling and assembly.

This compact 4mm PQFN package, SPDT switch offers wideband $0.05-6.0 \mathrm{GHz}$ performance with excellent isolation to loss ratio for both $T_{X}$ and $R_{X}$ states. The PIN diode provides 50 W typical C.W. power handling and 65 dBm IIP3 at 2010 MHz for maximum switch performance.

## Absolute Maximum Ratings ${ }^{1,2}$

@ $\mathrm{T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}$ (unless otherwise specified)

| Parameter | Absolute Maximum |
| :---: | :---: |
| Forward Current | $\|100 \mathrm{~mA}\|$ |
| Reverse Voltage (RF \& D.C. ) | $\mid-200 \mathrm{~V} \mathrm{\mid}$ |
| Operating Temperature | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |
| Storage Temperature | $-55^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Junction Temperature | $+175^{\circ} \mathrm{C}$ |
| $\mathrm{T}_{\mathrm{X}}$ Incident C.W. Power | $50 \mathrm{~W}(47 \mathrm{dBm})^{3}$ <br> $@ 2010 \mathrm{MHz}$ |
| $\mathrm{T}_{\mathrm{X}}$ Peak Incident Power | $>300 \mathrm{~W}, 5 \mathrm{us}, 1 \%$ duty |

1. Exceeding these limits may cause permanent damage.
2. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.
3. Baseplate Temperature must be controlled to a constant $+25^{\circ} \mathrm{C}$. See page 7 for derating curve.

## HMCTM PIN Diode SPDT 50 Watt Switch for <br> 0.05 - 6.0 GHz Higher Power Applications

Electrical Specifications at $+25^{\circ} \mathrm{C}$, Characteristic Impedance, $50 \mathrm{~mA} / 25 \mathrm{~V}, \mathrm{Z}_{0}=50 \Omega$

Note that this part must be held to a constant baseplate temperature to achieve the power handling results specified above. Adding a heatsink to the baseplate will improve performance to values greater than shown here. The increase in maximum input power from using a heatsink depends on the specific heatsink design.

With a sample board mounted onto a heatsink of dimensions and fins shown below, this switch can handle up to 35 Watts C.W. of incident power.

*Note - Diode Based Products require different minimum reverse bias voltages depending on the
frequency and incident power levels. More details can be found on page 11 of this datasheet.

## HMC ${ }^{\text {M }}$ PIN Diode SPDT 50 Watt Switch for 0.05-6.0 GHz Higher Power Applications

## MASW-000834 Minimum Required Reverse Bias Voltage

Minimum reverse bias voltage on a PIN diode based product varies with frequency of operation and incident power levels. As a rule of thumb, a designer can always use the magnitude of the peak RF voltage or empirically locate lower bias values than the peak RF voltage magnitude. However, it has been shown that lower DC voltages can be used depending on the RF environment in which a diode is placed. In the plot below, the minimum required reverse voltage vs. frequency is shown for an incident RF power of 50 Watts. This trend line will shift lower if the incident RF power is decreased. The biasing values have not been verified through measurement at M/A-COM Technology Solutions. As a result, please use the data below as a guide only for biasing requirements as this data is based solely on generic PIN diode equations. ${ }^{4}$

Please be cautious in that lower reverse bias levels can degrade isolation and distortion in a PIN diode based product.

MASW-000834 and Recommended Driver with +5V \& +28V DC Power ${ }^{5,6,7,8,9,10,11,12}$

MADR-008851 is the recommended driver for the MASW-000834 Switch.

Link to MADR-008851 Datasheet

TX Voltage

5. Forward Bias Diode Voltage: $\Delta \mathrm{Vf}$ is $\sim 0.9 \mathrm{~V} @ 22 \mathrm{~mA} ; \Delta \mathrm{Vf}$ is $\sim 1.0 \mathrm{~V} @ 35 \mathrm{~mA}$
6. R 1 is calculated by $(\mathrm{Vcc}-1.5 \mathrm{~V}) I_{\text {series }}$, where $\mathrm{I}_{\text {series }}$ is the desired bias current for the series diodes. For 21 mA load current, $\mathrm{R} 1=165 \Omega @$ $\mathrm{VCC}=5.0 \mathrm{~V}$ and $82 \Omega @ \mathrm{VCC}=3.3 \mathrm{~V}$. For 32 mA load current, $\mathrm{R} 1=110 \Omega @ \mathrm{VCC}=5.0 \mathrm{~V}$ and $56 \Omega @ \mathrm{VCC}=3.3 \mathrm{~V}$.
7. R 2 is calculated by $(\mathrm{Vdd}-1 \mathrm{~V}) / I_{\text {shunt }}$, where $\mathrm{I}_{\text {shunt }}$ is the desired forward bias current for the shunt diode. The power dissipation is calculated by $\mathrm{I}_{\text {shunt }} \times 27 \mathrm{~V}$. For 20 mA of $\mathrm{I}_{\text {shunt }}, \mathrm{R} 2$ should use a $2511,1 \mathrm{~W}, 1.3 \mathrm{k}$ ohm resistor.
8. C8 is already built-in for M/A-COM MASW-000834-13560T switch.
9. The voltage at the common anode will be approximately 1.5 V .
10. The current in through the back-biased diodes will be the leakage current for the diodes
11. C1-C5, L1-L4, R1, R2, and the switch are discrete components that should be installed on the user's board. It is recommended that Coilcraft 0603CS-27NXJLW or equivalent be used for L1-L4 at 2 GHz (values may vary based on the frequency).
12. There are 33 pF bypass capacitors included in the driver for the $\mathrm{RX}, \mathrm{TX}$, and SH 1 ports. There are cases, especially at higher frequencies, where the optional 12 pF bypass capacitors ( C 6 and C 7 ) that are shown on the schematic are needed.

## Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

## http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
