

# PROFET<sup>®</sup> ITS711L1

For Industrial Applications

PROFET ITS711L1

## Data Sheet

Rev. 1.3, 2010-03-16

Standard Products

# Smart Four Channel Highside Power Switch for Industrial Applications

## Features

- Overload protection
- Current limitation
- Short-circuit protection
- Thermal shutdown
- Overvoltage protection (including load dump)
- Fast demagnetization of inductive loads
- Reverse battery protection<sup>1)</sup>
- Undervoltage and overvoltage shutdown with auto-restart and hysteresis
- Open drain diagnostic output
- Open load detection in ON-state
- CMOS compatible input
- Loss of ground and loss of  $V_{bb}$  protection
- **Electrostatic discharge (ESD)** protection

## Application

- $\mu$ C compatible power switch with diagnostic feedback for 12 V and 24 V DC grounded loads in industrial applications
- All types of resistive, inductive and capacitive loads
- Replaces electromechanical relays and discrete circuits

## General Description

N channel vertical power FET with charge pump, ground referenced CMOS compatible input and diagnostic feedback, monolithically integrated in Smart SiPMOS® technology. Providing embedded protective functions.

## Product Summary

|                                   |              |              |               |    |
|-----------------------------------|--------------|--------------|---------------|----|
| Overvoltage Protection            | $V_{bb(AZ)}$ | 43           | V             |    |
| Operating voltage                 | $V_{bb(on)}$ | 5.0 ... 34   | V             |    |
| Operating temperature             | $T_a$        | -30 ... +85  | °C            |    |
| active channels:                  | one          | two parallel | four parallel |    |
| On-state resistance $R_{ON}$      | 200          | 100          | 50            | mΩ |
| Nominal load current $I_{L(NOM)}$ | 1.9          | 2.8          | 4.4           | A  |
| Current limitation $I_{L(SCr)}$   | 4            | 4            | 4             | A  |

PG-DSO-20-31

Green Product (RoHS compliant)

## Pin Definitions and Functions

| Pin                                | Symbol   | Function                                                                                                                                                         |
|------------------------------------|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1,10,<br>11,12,<br>15,16,<br>19,20 | $V_{bb}$ | <b>Positive power supply voltage.</b> Design the wiring for the simultaneous max. short circuit currents from channel 1 to 4 and also for low thermal resistance |
| 3                                  | IN1      | <b>Input 1 .. 4,</b> activates channel 1 .. 4 in case of logic high signal                                                                                       |
| 5                                  | IN2      |                                                                                                                                                                  |
| 7                                  | IN3      |                                                                                                                                                                  |
| 9                                  | IN4      |                                                                                                                                                                  |
| 18                                 | OUT1     | <b>Output 1 .. 4,</b> protected high-side power output of channel 1 .. 4. Design the wiring for the max. short circuit current                                   |
| 17                                 | OUT2     |                                                                                                                                                                  |
| 14                                 | OUT3     |                                                                                                                                                                  |
| 13                                 | OUT4     |                                                                                                                                                                  |
| 4                                  | ST1/2    | <b>Diagnostic feedback 1/2</b> of channel 1 and channel 2, open drain, low on failure                                                                            |
| 8                                  | ST3/4    | <b>Diagnostic feedback 3/4</b> of channel 3 and channel 4, open drain, low on failure                                                                            |
| 2                                  | GND1/2   | <b>Ground 1/2</b> of chip 1 (channel 1 and channel 2)                                                                                                            |
| 6                                  | GND3/4   | <b>Ground 3/4</b> of chip 2 (channel 3 and channel 4)                                                                                                            |

2) Supply voltages higher than  $V_{bb(AZ)}$  require an external current limit for the GND and status pins, e.g. with a  $150\ \Omega$  resistor in the GND connection and a  $15\text{ k}\Omega$  resistor in series with the status pin. A resistor for input protection is integrated.

3)  $R_l$  = internal resistance of the load dump test pulse generator

4)  $V_{Load\ dump}$  is setup without the DUT connected to the generator per ISO 7637-1 and DIN 40839

5) Device on  $50\text{mm} \times 50\text{mm} \times 1.5\text{mm}$  epoxy PCB FR4 with  $6\text{cm}^2$  (one layer,  $70\ \mu\text{m}$  thick) copper area for  $V_{bb}$  connection. PCB is vertical without blown air. See page 15

6) Soldering point: upper side of solder edge of device pin 15. See page 15

<sup>9)</sup> Add  $I_{ST}$ , if  $I_{ST} > 0$

<sup>10)</sup> Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous repetitive operation.

<sup>11)</sup> If channels are connected in parallel, output clamp is usually accomplished by the channel with the lowest  $V_{\text{ON}(\text{CL})}$

<sup>12)</sup> Requires a  $150\ \Omega$  resistor in GND connection. The reverse load current through the intrinsic drain-source diode has to be limited by the connected load. Note that the power dissipation is higher compared to normal operating conditions due to the voltage drop across the intrinsic drain-source diode. The temperature protection is not active during reverse current operation! Input and Status currents have to be limited (see max. ratings page 3 and circuit page 8).

L = "Low" Level      X = don't care      Z = high impedance, potential depends on external circuit  
H = "High" Level      Status signal valid after the time delay shown in the timing diagrams

Parallel switching of channel 1 and 2 (also channel 3 and 4) is easily possible by connecting the inputs and outputs in parallel (see truth table). If switching channel 1 to 4 in parallel, the status outputs ST1/2 and ST3/4 have to be configured as a 'Wired OR' function with a single pull-up resistor.

## Terms

Leadframe (V<sub>bb</sub>) is connected to pin 1,10,11,12,15,16,19,20

External R<sub>GND</sub> optional; two resistors R<sub>GND1/2</sub>, R<sub>GND3/4</sub> = 150 Ω or a single resistor R<sub>GND</sub> = 75 Ω for reverse battery protection up to the max. operating voltage.

- 15) With additional external pull up resistor
- 16) An external short of output to V<sub>bb</sub> in the off state causes an internal current from output to ground. If R<sub>GND</sub> is used, an offset voltage at the GND and ST pins will occur and the V<sub>ST low</sub> signal may be errorious.
- 17) Low resistance to V<sub>bb</sub> may be detected by no-load-detection

**Input circuit (ESD protection), IN1...4**

ESD zener diodes are not to be used as voltage clamp at DC conditions. Operation in this mode may result in a drift of the zener voltage (increase of up to 1 V).

**Status output, ST1/2 or ST3/4**

ESD-Zener diode: 6.1 V typ., max 5.0 mA;  
 $R_{ST(ON)} < 380 \, \Omega$  at 1.6 mA, ESD zener diodes are not to be used as voltage clamp at DC conditions. Operation in this mode may result in a drift of the zener voltage (increase of up to 1 V).

**Inductive and overvoltage output clamp, OUT1...4**

$V_{ON}$  clamped to  $V_{ON(CL)} = 47 \, \text{V}$  typ.

**Overvoltage protection of logic part  
 GND1/2 or GND3/4**

$V_{Z1} = 6.1 \, \text{V}$  typ.,  $V_{Z2} = 47 \, \text{V}$  typ.,  $R_I = 3.5 \, \text{k}\Omega$  typ.,  
 $R_{GND} = 150 \, \Omega$

**Reverse battery protection**

$R_{GND} = 150 \, \Omega$ ,  $R_I = 3.5 \, \text{k}\Omega$  typ,

Temperature protection is not active during inverse current operation.

### Open-load detection, OUT1...4

ON-state diagnostic condition:

$$V_{ON} < R_{ON} \cdot I_{L(OL)}; \text{IN high}$$

OFF-state diagnostic condition:

$$V_{OUT} > 3 \text{ V typ.}; \text{IN low}$$

### GND disconnect

(channel 1/2 or 3/4)

Any kind of load. In case of IN = high is  $V_{OUT} \approx V_{IN} - V_{IN(T+)}$ .  
Due to  $V_{GND} > 0$ , no  $V_{ST} = \text{low}$  signal available.

### GND disconnect with GND pull up

(channel 1/2 or 3/4)

Any kind of load. If  $V_{GND} > V_{IN} - V_{IN(T+)}$  device stays off  
Due to  $V_{GND} > 0$ , no  $V_{ST} = \text{low}$  signal available.

### Vbb disconnect with energized inductive load

For an inductive load current up to the limit defined by  $E_{AS}$  (max. ratings see page 3 and diagram on page 10) each switch is protected against loss of  $V_{bb}$ .

Consider at your PCB layout that in the case of  $V_{bb}$  disconnection with energized inductive load the whole load current flows through the GND connection.

### Inductive load switch-off energy dissipation

Energy stored in load inductance:

$$E_L = \frac{1}{2} \cdot L \cdot I_L^2$$

While demagnetizing load inductance, the energy dissipated in PROFET is

$$E_{AS} = E_{bb} + E_L - E_R = \int V_{ON(CL)} \cdot i_L(t) dt,$$

with an approximate solution for  $R_L > 0 \Omega$ :

$$E_{AS} = \frac{I_L \cdot L}{2 \cdot R_L} (V_{bb} + |V_{OUT(CL)}|) \ln \left( 1 + \frac{I_L \cdot R_L}{|V_{OUT(CL)}|} \right)$$

### Maximum allowable load inductance for a single switch off (one channel)<sup>5)</sup>

$L = f(I_L)$ ;  $T_{j,start} = 150^\circ\text{C}$ ,  $V_{bb} = 12\text{ V}$ ,  $R_L = 0 \Omega$

### Typ. on-state resistance

$R_{ON} = f(V_{bb}, T_j)$ ;  $I_L = 1.8\text{ A}$ ,  $I_N = \text{high}$

### Typ. open load detection current

$I_{L(OL)} = f(V_{bb}, T_j)$ ;  $I_N = \text{high}$

**Typ. standby current**
 $I_{bb(off)} = f(T_j)$ ;  $V_{bb} = 9...34\text{ V}$ ,  $IN1...4 = \text{low}$ 

**Typ. initial short circuit shutdown time**
 $t_{off(SC)} = f(T_{j,start})$ ;  $V_{bb} = 12\text{ V}$ 

## Timing diagrams

Timing diagrams are shown for chip 1 (channel 1/2). For chip 2 (channel 3/4) the diagrams are valid too. The channels 1 and 2, respectively 3 and 4, are symmetric and consequently the diagrams are valid for each channel as well as for permuted channels

**Figure 1a:**  $V_{bb}$  turn on:

**Figure 2a:** Switching a lamp:

The initial peak current should be limited by the lamp and not by the initial short circuit current  $I_{L(SCp)} = 7.5$  A typ. of the device.

**Figure 2b:** Switching an inductive load

\*) if the time constant of load is too large, open-load-status may occur

**Figure 3a:** Turn on into short circuit:  
shut down by overtemperature, restart by cooling

Heating up of the chip may require several milliseconds, depending on external conditions ( $t_{off(SC)}$  vs.  $T_{j,start}$  see page 11)

**Figure 3b:** Turn on into short circuit:  
shut down by overtemperature, restart by cooling  
(two parallel switched channels 1 and 2)

**Figure 4a:** Overtemperature:  
Reset if  $T_j < T_{jt}$

**Figure 5a:** Open load: detection in ON-state, open load occurs in on-state

**Figure 5b:** Open load: detection in ON-state, turn on/off to open load

The status delay time  $t_{d(STOL4)}$  allows to distinguish between the failure modes "open load in ON-state" and "overtemperature".

**Figure 5c:** Open load: detection in ON- and OFF-state (with R<sub>EXT</sub>), turn on/off to open load

**Figure 6a:** Undervoltage:

**Figure 6b:** Undervoltage restart of charge pump

IN = high, normal load conditions.  
Charge pump starts at  $V_{bb(ucp)} = 5.6V$  typ.

**Figure 7a:** Overvoltage:

# 1 Package Outlines

**Figure 1 PG-DSO-20-31**

## Green Product (RoHS compliant)

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e. Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020).

## 2 Revision History

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
