

## MAX14930–MAX14932

## 4-Channel, 2.75kV<sub>RMS</sub> Digital Isolators

### General Description

The MAX14930–MAX14932 are a family of 4-channel, 2.75kV digital isolators utilizing Maxim's proprietary process technology. For applications requiring 5kV of isolation, see the MAX14934–MAX14936. The MAX14930–MAX14932 family transfers digital signals between circuits with different power domains at ambient temperatures up to +125°C.

The MAX14930–MAX14932 family offers all three possible unidirectional channel configurations to accommodate any 4-channel design; including SPI, RS-232, RS-485, and digital I/O applications. For applications requiring bidirectional channels, such as I<sup>2</sup>C, see the MAX14933.

Devices are available with data rates from DC up to 1Mbps, 25Mbps, or 150Mbps. Each device is also available in either a default high or default low configuration. The default is the state an output goes to when its input is unpowered. See the [Ordering Information and Selector Guide](#) for the suffixes associated with each option.

Independent 1.71V to 5.5V supplies on each side of the isolator also make the devices suitable for use as level translators.

The MAX14930–MAX14932 are available in both a 16-pin wide body (10.3mm x 7.5mm) and narrow body (9.9mm x 3.9mm) SOIC package. All devices are rated for operation at ambient temperatures of -40°C to +125°C.

[Ordering Information and Selector Guide](#) appears at end of data sheet.

### Benefits and Features

- Robust Galvanic Isolation of Digital Signals
  - Withstands 2.75kV<sub>RMS</sub> for 60s (V<sub>ISO</sub>)
  - Continuously Withstands 443V<sub>RMS</sub> (V<sub>IOWM</sub>)
  - 630V<sub>P</sub> Repetitive Peak Voltage (V<sub>IORM</sub>)
  - Withstands ±10kV Surge per IEC 61000-4-5
- Interfaces Directly with Most Micros and FPGAs
  - Accepts 1.71V to 5.5V Supplies
- Many Options Support Broad Applications
  - 3 Data Rates (1Mbps, 25Mbps, 150Mbps)
  - 3 Channel Direction Configuration
  - 2 Output Default States (High or Low)
  - 2 Packages (4mm or 8mm Creepage and Clearance)
- Low Power Consumption at High Data Rates
  - At 1.8V:
    - 2.5mA per Channel Typical at 1Mbps
    - 5.25mA per Channel Typical at 100Mbps
  - At 3.3V:
    - 2.6mA per Channel Typical at 1Mbps
    - 7.1mA per Channel Typical at 100Mbps

### Safety Regulatory Approvals

- UL According to UL1577
- cUL According to CSA Bulletin 5A
- VDE 0884-10 (Pending)
- TUV

### Applications

- Fieldbus Communications for Industrial Automation
- Isolated SPI, RS-232, RS-485/RS-422
- General Multichannel Isolation Applications
- Battery Management
- Medical Systems

### Functional Diagram

## Absolute Maximum Ratings

$V_{DDA}$  to GNDA,  $V_{DDB}$  to GNDB ..... -0.3V to +6V  
 $INA_{-}$ , ENA to GNDA ..... -0.3V to +6V  
 $INB_{-}$ , ENB to GNDB ..... -0.3V to +6V  
 $OUTA_{-}$  to GNDA ..... -0.3V to ( $V_{DDA} + 0.3V$ )  
 $OUTB_{-}$  to GNDB ..... -0.3V to ( $V_{DDB} + 0.3V$ )  
 Short-Circuit Duration  
 ( $OUTA_{-}$  to GNDA,  $OUTB_{-}$  to GNDB) ..... Continuous

Continuous Power Dissipation ( $T_A = +70^{\circ}C$ )  
     Wide SOIC (derate 14.1mW/ $^{\circ}C$  above  $+70^{\circ}C$ ) ..... 1126.8mW  
     Narrow SOIC (derate 13.3mW/ $^{\circ}C$  above  $+70^{\circ}C$ ) .. 1066.7mW  
 Operating Temperature Range .....  $-40^{\circ}C$  to  $+125^{\circ}C$   
 Maximum Junction Temperature .....  $+150^{\circ}C$   
 Storage Temperature Range .....  $-65^{\circ}C$  to  $+150^{\circ}C$   
 Lead Temperature (soldering, 10s) .....  $+300^{\circ}C$   
 Soldering Temperature (reflow) .....  $+260^{\circ}C$

## Package Thermal Characteristics (Note 1)

### Wide SOIC

Junction-to-Ambient Thermal Resistance ( $\theta_{JA}$ ) .....  $71^{\circ}C/W$   
 Junction-to-Case Thermal Resistance ( $\theta_{JC}$ ) .....  $23^{\circ}C/W$

### Narrow SOIC

Junction-to-Ambient Thermal Resistance ( $\theta_{JA}$ ) .....  $75^{\circ}C/W$   
 Junction-to-Case Thermal Resistance ( $\theta_{JC}$ ) .....  $24^{\circ}C/W$

**Note 1:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maximintegrated.com/thermal-tutorial](http://www.maximintegrated.com/thermal-tutorial).

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## DC Electrical Characteristics

$(V_{DDA} - V_{GNDA} = +1.71V$  to  $+5.5V$ ,  $V_{DDB} - V_{GNDB} = +1.71V$  to  $+5.5V$ ,  $C_L = 15pF$ ,  $T_A = -40^{\circ}C$  to  $+125^{\circ}C$ , unless otherwise noted. Typical values are at  $V_{DDA} - V_{GNDA} = +3.3V$ ,  $V_{DDB} - V_{GNDB} = +3.3V$ ,  $V_{GNDA} = V_{GNDB}$ ,  $T_A = +25^{\circ}C$ , unless otherwise noted.) (Note 2)

## ESD Protection

| PARAMETER | SYMBOL | CONDITIONS                 | MIN | TYP | MAX | UNITS |
|-----------|--------|----------------------------|-----|-----|-----|-------|
| ESD       |        | Human Body Model, all pins |     | ±4  |     | kV    |

**Note 2:** All devices are 100% production tested at  $T_A = +125^{\circ}\text{C}$ . Specifications over temperature are guaranteed by design.

**Note 3:** Not production tested. Guaranteed by design.

**Note 4:** All currents into the device are positive. All currents out of the device are negative.

**Note 5:** CMTI is the maximum sustainable common-mode voltage slew rate while maintaining the correct output. CMTI applies to both rising and falling common-mode voltage edges. Tested with the transient generator connected between GNDA and GNDB ( $V_{CM} = 1000\text{V}$ ).

## Safety Regulatory Approvals (Pending)

## Typical Operating Circuit

## Typical Operating Circuit (continued)

## Detailed Description

The MAX14930–MAX14932 are a family of 4-channel digital isolators. The MAX14930–MAX14932 family transfers digital signals between circuits with different power domains. The devices are rated for 2.75kV<sub>RMS</sub> isolation voltage for 60 seconds. This family of digital isolators offers low-power operation, high electromagnetic interference (EMI) immunity, and stable temperature performance through Maxim's proprietary process technology. The devices isolate different ground domains and block high-voltage/high-current transients from sensitive or human interface circuitry.

The MAX14930–MAX14932 family offers three unidirectional channel configurations for design convenience. The MAX14930 features four channels transferring digital signals in one direction for applications such as isolated digital I/O. The MAX14931 has three channels transmitting data in one direction and one channel transmitting in the opposite direction, making it ideal for applications such as isolated SPI and RS-485 communication. The MAX14932 provides further design flexibility with two channels in each direction for isolated RS-232 or other applications.

Devices are available with data rates from DC up to 1Mbps (A/D versions), 25Mbps (B/E versions), or 150Mbps (C/F versions). Each device can also be ordered with default-high or default-low outputs. This is the state an output will go to when the input side of the device is unpowered.

The devices have two supply inputs, V<sub>DDA</sub> and V<sub>ddb</sub>, that independently set the logic levels on either side of the device. V<sub>DDA</sub> and V<sub>ddb</sub> are referenced to GNDA and GNDB, respectively. The MAX14930–MAX14932 family also features a refresh circuit to ensure output accuracy when an input remains in the same state indefinitely.

## Digital Isolation

The MAX14930–MAX14932 family provides galvanic isolation for digital signals that are transmitted between two ground domains. Up to 630V<sub>PEAK</sub> of continuous isolation is supported, as well as transient differences of up to 2.75kV<sub>RMS</sub> for up to 60 seconds.

## Level Shifting

The wide supply voltage range of both V<sub>DDA</sub> and V<sub>ddb</sub> allows the MAX14930–MAX14932 family to be used for level translation in addition to isolation. V<sub>DDA</sub> and V<sub>ddb</sub> can be independently set to any voltage from 1.71V to 5.5V. The supply voltage sets the logic level on the corresponding side of the isolator.

## Unidirectional Channels

Each channel of the MAX14930–MAX14932 is unidirectional; it only passes data in one direction, as indicated in the functional diagram. Each device features four unidirectional channels that operate independently with guaranteed data rates from DC up to 1Mbps (A/D versions), 25Mbps (B/E versions), or 150Mbps (C/F versions). The output driver of each channel is push-pull, eliminating the need for pullup resistors. The outputs are able to drive both TTL and CMOS logic inputs.

## Startup and Undervoltage Lockout

The V<sub>DDA</sub> and V<sub>ddb</sub> supplies are both internally monitored for undervoltage conditions. Undervoltage events can occur during power-up, power-down, or during normal operation due to a sagging supply voltage. When an undervoltage condition is detected on either supply, all outputs go to their default states regardless of the status of the inputs (Table 1). Figures 2–5 show the behavior of the outputs during power-up and power-down.

Table 1. Output Behavior During Undervoltage Conditions

| V <sub>IN_</sub> | V <sub>DDA</sub> | V <sub>ddb</sub> | V <sub>OUTA_</sub> | V <sub>OUTB_</sub> |
|------------------|------------------|------------------|--------------------|--------------------|
| 1                | Powered          | Powered          | 1                  | 1                  |
| 0                | Powered          | Powered          | 0                  | 0                  |
| X                | Undervoltage     | Powered          | Default            | Default            |
| X                | Powered          | Undervoltage     | Default            | Default            |

Figure 3. Undervoltage Lockout Behavior (MAX1493\_ A/B/C Low)

Figure 4. Undervoltage Lockout Behavior (MAX1493\_ D/E/F High)

Figure 5. Undervoltage Lockout Behavior (MAX1493\_ D/E/F Low)

## Applications Information

### Power-Supply Sequencing

The MAX14930–MAX14932 do not require special power-supply sequencing. The logic levels are set independently on either side by  $V_{DDA}$  and  $V_{DDB}$ . Each supply can be

present over the entire specified range regardless of the level or presence of the other supply.

### Power-Supply Decoupling

To reduce ripple and the chance of introducing data errors, bypass  $V_{DDA}$  and  $V_{DDB}$  with 0.1 $\mu$ F ceramic capacitors to  $GNDA$  and  $GNDB$ , respectively. Place the bypass capacitors as close to the power-supply input pins as possible.

## Ordering Information and Selector Guide

| PART            | CHANNEL CONFIGURATION | DATA RATE (Mbps) | OUTPUT       | TEMP RANGE      | PIN-PACKAGE    |
|-----------------|-----------------------|------------------|--------------|-----------------|----------------|
| MAX14930AASE+** | 4/0                   | 1                | Default High | -40°C to +125°C | 16 Narrow SOIC |
| MAX14930AAWE+** | 4/0                   | 1                | Default High | -40°C to +125°C | 16 Wide SOIC   |

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
