

# ACNV3130

## 2.5 Amp Output Current IGBT Gate Drive Optocoupler in 500Mil DIP10 Package

### Data Sheet

#### Description

The ACNV3130 contains an AlGaAs LED, which is optically coupled to an integrated circuit with a power output stage. This optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control inverter applications. The high operating voltage range of the output stage provides the drive voltages required by gate controlled devices. The voltage and high peak output current supplied by this optocoupler can be used to drive a discrete power stage make it ideally suited for direct driving IGBT with ratings up to 1700V/100A. For IGBTs with higher ratings, this optocoupler can be used to drive a discrete power stage which drives the IGBT gate. The ACNV3130 has the highest insulation voltage of  $V_{IORM} = 2262 V_{peak}$  in the IEC/ EN/DIN EN 60747-5-5.

#### Functional Diagram

Design Note:

- NC denotes not connected
- A 0.1  $\mu F$  bypass capacitor must be connected between pins  $V_{CC}$  and  $V_{EE}$

#### Truth Table - ACNV3130

| LED | $V_{CC} - V_{EE}$<br>"POSITIVE GOING"<br>(i.e., TURN-ON) | $V_{CC} - V_{EE}$<br>"NEGATIVE GOING"<br>(i.e., TURN-OFF) | $V_O$      |
|-----|----------------------------------------------------------|-----------------------------------------------------------|------------|
| OFF | 0 - 30 V                                                 | 0 - 30 V                                                  | LOW        |
| ON  | 0 - 11V                                                  | 0 - 9.5V                                                  | LOW        |
| ON  | 11 - 13.5V                                               | 9.5 - 12V                                                 | TRANSITION |
| ON  | 13.5 - 30V                                               | 12 - 30V                                                  | HIGH       |

#### Features

- 2.5 A maximum peak output current
- 2.0 A minimum peak output current
- 500 ns maximum propagation delay
- 350 ns maximum propagation delay difference
- 40 kV/ $\mu s$  minimum Common Mode Rejection (CMR) at  $V_{CM} = 1500 V$
- $I_{CC} = 5.0$  mA maximum supply current
- Under Voltage Lock-Out Protection (UVLO) with Hysteresis
- Wide Operating  $V_{CC}$  Range: 15 to 30 V
- Industrial Temperature Range: -40°C to 105°C
- Safety Approval Pending
  - UL Recognized 7500  $V_{RMS}$  for 1min.
  - CSA
  - IEC/EN/DIN EN 60747-5-5  $V_{IORM} = 2262 V_{peak}$

#### Applications

- 690Vac application
- IGBT/MOSFET gate drive
- AC and Brushless DC motor drives
- Renewable energy inverters
- Industrial inverters
- Switching power supplies

**CAUTION:** It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

## Ordering Information

ACNV3130 is UL Recognized with 7500 V<sub>RMS</sub> for 1 minute per UL1577.

| Part number | Option<br>RoHS Compliant | Package | Gull Wing<br>Surface Mount | Tape<br>& Reel | IEC/EN/DIN EN<br>60747-5-5 | Quantity     |

To order, choose a part number from the part number column and combine with the desired option from the option column to form an order entry.

Example 1:

ACNV3130-500E to order product of 500mil DIP Gull Wing Surface Mount package in Tape and Reel packaging with IEC/EN/DIN EN 60747-5-5 Safety Approval in RoHS compliant.

Example 2:

ACNV3130-000E to order product of 500mil DIP package in Tube packaging and RoHS compliant.

Option datasheets are available. Contact your Avago sales representative or authorized distributor for information.

## Package Outline Drawings

### ACNV3130 Outline Drawing (10-pin Wide Body Package / 500mil DIP)

### ACNV3130 Gull Wing Surface Mount Option 300 Outline Drawing

## Recommended Pb-Free IR Profile

Recommended reflow condition as per JEDEC Standard, J-STD-020 (latest revision). Non- Halide Flux should be used.

## Regulatory Information

The ACNV3130 is pending approval by the following organizations:

### UL

Recognized under UL 1577, component recognition program up to  $V_{ISO} = 7500 V_{RMS}$ , File E55361

### CSA

CSA Component Acceptance Notice #5, File CA 88324

### IEC/EN/DIN EN 60747-5-5

Maximum Working Insulation Voltage  $V_{IORM} = 2262V_{peak}$

**Table 1. IEC/EN/DIN EN 60747-5-5 Insulation Characteristics\***

| Description                                                                                                                                           | Symbol          | Characteristic   | Unit        |

\* Refer to the optocoupler section of the Isolation and Control Components Designer's Catalog, under Product Safety Regulations section, (IEC/EN/DIN EN 60747-5-5) for a detailed description of Method a and Method b partial discharge test profiles.

Note: These optocouplers are suitable for "safe electrical isolation" only within the safety limit data. Maintenance of the safety data shall be ensured by means of protective circuits. Surface mount classification is Class A in accordance with CECC 00802.

**Table 2. Insulation and Safety Related Specifications**

| Parameter                                         | Symbol | ACNV3130 | Units | Conditions                                                                                                                         |
|---------------------------------------------------|--------|----------|-------|------------------------------------------------------------------------------------------------------------------------------------|
| Minimum External Air Gap (Clearance)              | L(101) | 13.0     | mm    | Measured from input terminals to output terminals, shortest distance through air.                                                  |
| Minimum External Tracking (Creepage)              | L(102) | 13.0     | mm    | Measured from input terminals to output terminals, shortest distance path along body.                                              |
| Minimum Internal Plastic Gap (Internal Clearance) |        | 1.5      | mm    | Through insulation distance conductor to conductor, usually the straight line distance thickness between the emitter and detector. |
| Tracking Resistance (Comparative Tracking Index)  | CTI    | > 200    | V     | DIN IEC 112/VDE 0303 Part 1                                                                                                        |
| Isolation Group                                   |        | IIIa     |       | Material Group (DIN VDE 0110, 1/89, Table 1)                                                                                       |

Notes:

1. All Avago data sheets report the creepage and clearance inherent to the optocoupler component itself. These dimensions are needed as a starting point for the equipment designer when determining the circuit insulation requirements. However, once mounted on a printed circuit board, minimum creepage and clearance requirements must be met as specified for individual equipment standards. For creepage, the shortest distance path along the surface of a printed circuit board between the solder fillets of the input and output leads must be considered (the recommended Land Pattern does not necessarily meet the minimum creepage of the device). There are recommended techniques such as grooves and ribs which may be used on a printed circuit board to achieve desired creepage and clearances. Creepage and clearance distances will also change depending on factors such as pollution degree and insulation level.

**Table 3. Absolute Maximum Ratings**

\* The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating, refer to your equipment level safety specification or Avago Technologies Application Note 1074 entitled "Optocoupler Input-Output Endurance Voltage."

Notes:

1. Derate linearly above  $70^\circ\text{C}$  free-air temperature at a rate of  $0.3 \text{ mA}/^\circ\text{C}$ .
2. Maximum pulse width =  $10 \mu\text{s}$ . This value is intended to allow for component tolerances for designs with  $I_O$  peak minimum =  $2.0 \text{ A}$ . See applications section for additional details on limiting  $I_{OH}$  peak.
3. Derate linearly above  $85^\circ\text{C}$  free-air temperature at a rate of  $-18.7 \text{ mW}/^\circ\text{C}$  (TBD)
4. Derate linearly above  $85^\circ\text{C}$  free-air temperature at a rate of  $-14.1 \text{ mW}/^\circ\text{C}$  (TBD). The maximum LED junction temperature should not exceed  $125^\circ\text{C}$ .
5. Maximum pulse width =  $50 \mu\text{s}$ .
6. In this test  $V_{OH}$  is measured with a dc load current. When driving capacitive loads,  $V_{OH}$  will approach  $V_{CC}$  as  $I_{OH}$  approaches zero amps.
7. Maximum pulse width =  $1 \text{ ms}$ .
8. Pulse Width Distortion (PWD) is defined as  $|t_{PHL} - t_{PLH}|$  for any given device.
9. The difference between  $t_{PHL}$  and  $t_{PLH}$  between any two ACNV3130 parts under the same test condition.
10. Pin 1, 4 and 5 need to be connected to LED common.
11. Common mode transient immunity in the high state is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in the high state (i.e.,  $V_O > 15.0 \text{ V}$ ).
12. Common mode transient immunity in a low state is the maximum tolerable  $dV_{CM}/dt$  of the common mode pulse,  $V_{CM}$ , to assure that the output will remain in a low state (i.e.,  $V_O < 1.0 \text{ V}$ ).
13. In accordance with UL1577, each optocoupler is proof tested by applying an insulation test voltage  $\geq 9000 \text{ Vrms}$  for 1 second (leakage detection current limit,  $I_{I-O} \mu 5 \mu\text{A}$ ).
14. Device considered a two-terminal device: pins 1, 2, 3, 4 and 5 shorted together and pins 6, 7, 8, 9 and 10 shorted together.
15. The device was mounted on a high conductivity test board as per JEDEC 51-7.

| R <sub>11</sub>    | 118.5 |
| R <sub>12</sub>    | 11.6  |
| R <sub>21</sub>    | 14    |
| R <sub>22</sub>    | 55.5  |

This thermal model assumes the device is soldered onto a high conductivity board as per JEDEC 51-7. The temperature at the LED and Detector junctions of the optocoupler can be calculated using the equations below.

$$T_1 = (R_{11} * P_1 + R_{12} * P_2) + T_A \quad \text{-- (1)}$$

$$T_2 = (R_{21} * P_1 + R_{22} * P_2) + T_A \quad \text{-- (2)}$$

Using the given thermal resistances and thermal model formula in this datasheet, we can calculate the junction temperature for both LED and the output detector. Both junction temperatures should be within the absolute maximum rating of 125°C.

## Данный компонент на территории Российской Федерации

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
