

Medical / Industrial AC-DC Power Supply

1200W with 5V/2A Standby / MEB-1K2A series

Highlights & Features

- Up to 1200 Watt in 5"x8.03"x1.59" Package
- Up to 19.1W/inch³ Power Density
- Full Power from 90V to 264V
- Full Power up to 50°C Ambient
- Up to 500KHrs MTBF
- 2MOPP Isolation
- Suited for Type BF Medical Products.
- 5V/2A Standby Output
- Current Sharing
- Conformal Coating
- Class B Conducted and Radiated EMI
- IEC60601-1-2 4th Edition Immunity Compliance
- Normal and Reversed Option for Remote On/Off and Power Good Signal
- Analog and Digital Voltage Trimming
- PMBus Ver 1.3 Supported
- Intelligent Fan Speed Control
- Optional USB/RS232/RS485 adapter for communication

Safety Certifications

- IEC60601-1 2nd edition
- IEC60601-1 3rd edition + A1
- CB report
- TUV EN60601-1:2006/A11/A12
- UL60601-1+CAN/CSA 60601-1: (Ed.3.2005)
- IEC60950-1 CB report
- TUV EN60950-1
- UL60950-1+CAN/CSA60950-1
- GB4943.1-2011, GB9254-2008, GB17625.1-2012

Input			
Input Voltage	85VAC ~ 264VAC		
Input Frequency	47Hz ~ 63Hz		
Input Current	<15A		
Inrush Current	<40A		
Power Factor	>0.95 @ rated load		
Efficiency	Up to 94% 1)		
Patient Leakage Current	<100uA normal, <500uA SFC		
Earth Leakage Current	<300uA normal, <1mA SFC		
Output			
Output Voltage	24V	42V	48V
Output Current	0-50A	0-28.5A	0-25A
Ripple & Noise	<1% Vrated pk-pk		
Standby Power	5V / 2A (No minimum load required)		
Environmental			
MTBF	500KHrs		
Operation Temperature	-20°C ~70°C 2)		
Operation Altitude	5000m or 54kPa		

1) Exclude fan power

2) Power de-rating with temperature above 50°C, refer to power de-rating curve for detail

Medical / Industrial AC-DC Power Supply

1200W with 5V/2A Standby / MEB-1K2A series

Model Numbering

Model Information (With 5V/2A standby available)

Model Number	Input Voltage	Output Voltage	Current Output
MEB-1K2A24	85-264Vac	24Vdc	0-50A
MEB-1K2A42	85-264Vac	42Vdc	0-28.5A
MEB-1K2A48	85-264Vac	48Vdc	0-25A

Revision Control Code

Revision Control Code	Package
AAx*	M3 Screw for PSU installation
ABx**	M4 Screw for PSU installation Improved output connector structure

*For 24V & 48V models only.

** For 24V & 42V models only. If any inquiry, please contact with us through "www.DeltaPSU.com".

Medical / Industrial AC-DC Power Supply

1200W with 5V/2A Standby / MEB-1K2A series

Specifications

Input Ratings / Characteristics

Nominal Input Voltage		100-240Vac
Input Voltage Range		85-264Vac
Nominal Input Frequency		50-60Hz
Input Frequency Range		47-63Hz
Input Current (max)		15A
Input Surge Voltage (max)		300Vac for 100ms
Full load Efficiency(typ.)	For 24V output Model	90% @ 115Vac/60Hz 93% @ 230Vac/50Hz, Reference Fig.1
	For 42V output Model	90.9% @ 115Vac/60Hz 93.2% @ 230Vac/50Hz, Reference Fig.1-1
	For 48V output Model	91.5% @ 115Vac/60Hz 94% @ 230Vac/50Hz, Reference Fig.1-2
Inrush Current (max)		40A @ 264Vac, cold/hot start
Input-PE(protective earth) leakage current (max)		0.3mA @ NC, 1mA @ SFC 1)
Output-PE(protective earth) leakage current for Type BF application (max)		0.1mA @ NC, 0.5mA @ SFC 1)
Power Factor (min)		0.95 @ 115V/50Hz, 230V/50Hz, full load

1) NC: normal condition, SFC: single fault condition

Leakage Current

Input-PE Leakage Current	100Vac/60Hz (Typ)	264Vac/60Hz(Typ)	Delta Limit	IEC60601-1 Limit
Normal Condition	92.1	236.6	300uA max	5000uA max
Single Fault Condition	174.3	459.3	1000uA max	10000uA max
Output-PE Leakage Current for Type BF application				
Normal Condition	31.2	79.3	100uA max	100uA max
Single Fault Condition	66.2	169.5	500uA max	500uA max

Pin 13	Current Share
Pin 14	DC RTN

Medical / Industrial AC-DC Power Supply

1200W with 5V/2A Standby / MEB-1K2A series

Functions

Start-up Time

The time required for the output voltage to reach 90% of its final steady state value, after the input voltage is applied

Rise Time

The time required for the output voltage to change from 10% to 90% of its final steady state value.

Hold-up Time

Time between the collapse of the AC input voltage, and the output falling to 90% of its steady state value

Figure 4 Time sequence

Dynamic Response (Main Output)

The power supply output voltage will remain within $\pm 5\%$ of its steady state value, when subjected to a dynamic load 50 to 100% of its rated current.

■ 50 to 100% Load

Figure 5 Dynamic Load

Inrush Current

Inrush current is the input current that occurs when the input voltage is first applied. For AC input voltages, the maximum peak value of inrush current will occur during the first half cycle of the applied AC voltage. This peak value decreases exponentially during subsequent cycles of AC voltage.

Figure 6 Inrush Current

Overvoltage Protection

The power supply's overvoltage circuit will be activated when its internal feedback circuit fails. The output voltage shall not exceed its specifications defined on Page 6 under "Protections". Power supply will latch off, and require removal/re-application of input AC voltage in order to restart.

Overload & Over current Protections

The power supply's Overload (OLP) and Over current (OCP) Main output Overload (OLP) and Over current (OCP) Protections is achieved by constant output current control. If the output current increases higher than rated current, the current will be clamped to be constant ($<130\%$ rated current), output voltage will then drop if output impedance keeps decreasing in the constant current control. Finally output under voltage protection will be triggered if the output voltage falls below 75% rated value and enters "Hiccup mode" (Auto-Recovery). The power supply will recover once the fault condition causing the OLP and OCP is removed and IO is back within the specified limit.

Figure 7. Hiccup at OLP/OCP

Additionally, if the lout is $>100\%$ for a prolong period of time (depending on the load), the Over Temperature Protection (OTP) may be activated due to high temperature on critical components. The power supply will then go into latch mode.

Medical / Industrial AC-DC Power Supply

1200W with 5V/2A Standby / MEB-1K2A series

Short Circuit Protection

Output OLP/OCF function also provides protection against short circuits. When a short circuit is applied, the output current will operate in "Hiccup mode". The power supply will return to normal operation after the short circuit is removed.

Over Temperature Protection

As mentioned above, the power supply also has Over Temperature Protection (OTP). This is activated when the overload condition persists for an extended duration and the output current is below the overload trigger point but >100% load. In the event of a higher operating temperature condition at 100% load, the power supply will run into OTP when the surrounding air temperature is higher than the operating temperature. When activated, the output voltage will go into latch mode until the input voltage is removed; then, reapplied, and the surrounding air temperature drops to its normal operating temperature.

Power Good

Power Good+/- pin is an isolated open collector transistor (80V/50mA rating). A resistor (suggested value 10Kohm, 1/8W) can be added between Power Good- pin and DC RTN, Power Good+ pin can be connected to 5V standby (or, other available pull-up voltage that is no greater than the transistor rating). Value of resistor may have to be adjusted, depending on voltage used, and other end-use conditions of the Power Good+ pin connection to the product. When AC input is on, Power Good Signal (Shown in below figure) generated will be high. When AC input is off, Power Good Signal generated will be low. There will be a minimum of 5 milliseconds (at 1000W load) between the time the Power Good Signal goes to low level, and the time when the output reaches 90% of its rated value.

Figure 8 Power Good Connection

Figure 9 Power Good Time Sequence

Remote On_Off/Inhibit

Remote ON_OFF/INHIBIT uses an isolated diode located within the power supply. This signal can be used to enable or disable only the main output. When the main output is disabled, the +5V Standby output will continue to operate. System can use a switch to conduct through this diode (suggested pull up resistor to 5V standby with 1Kohm resistor) to disable the main out. The signal can be floated (no connection to the signal), in order to enable the main output.

Figure 10 Remote On_Off Connection

Remote Sense

Remote sense feature can be used to compensate for the extra voltage drop on output wires that are connected from the main output terminals, to the load. With wires connected from the remote sense pins, at the same locations as the wires from the main output, the remote sense function can compensate up to 500mV voltage drop. The power supply will not be damaged if the remote sense pins are shorted, or if a reverse/inverted polarity connection is made to the load

Medical / Industrial AC-DC Power Supply

1200W with 5V/2A Standby / MEB-1K2A series

Voltage Adjustment

The power supply provides a potentiometer for user to adjust the output voltage. The output voltage is designed to be able to adjust up to $\pm 10\%$ of rated voltage, when the output is adjusted below nominal value, the maximum output current is the same as the nominal output, when the output is adjusted above nominal value, the output power cannot exceed the nominal maximum power (the maximum output current will be reduced accordingly).

PMBus

The power supply can communicate with the host product, using PMBus version 1.3 protocols. Multiple functions can be realized, such as monitoring the power supply operation status, and editing the power supply operating set-points. See user instruction for detailed control information.

Current Sharing

The power supply supports current sharing. Parallel the outputs as well as the current sharing bus to enable this feature.

Certificate

All Delta Medical Power products conform to the European directive 2011/65/EU. ROHS is the abbreviation for "Restriction of the use of certain hazardous substances".

Delta has been certified as meeting the requirement of ISO 13485: 2003 and EN ISO 13485:2012 for the design and manufacture of switching power supply and adaptor for medical device.

In addition to a UL Total Certification Program (TCP) approved client laboratory for IEC60950 and IEC60065. Delta also has participated UL Client Test Data Program (CDTP) for IEC 60601

Attention

Delta provides all information in the datasheets on an "AS IS" basis and does not offer any kind of warranty through the information for using the product. In the event of any discrepancy between the information in the catalog and datasheets, the datasheets shall prevail (please refer to www.DeltaPSU.com for the latest datasheets information). Delta shall have no liability of indemnification for any claim or action arising from any error for the provided information in the datasheets. Customer shall take its responsibility for evaluation of using the product before placing an order with Delta.

Delta reserves the right to make changes to the information described in the datasheets without notice.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
