

ISL78215

Improved Industry Standard Single-Ended Current Mode PWM Controller

FN7673
Rev 1.00
December 7, 2013

The ISL78215 family of adjustable frequency, low power, pulse width modulating (PWM) current mode controllers is designed for a wide range of power conversion applications including boost, flyback, and isolated output configurations. Peak current mode control effectively handles power transients and provides inherent overcurrent protection.

This advanced BiCMOS design is pin compatible with the industry standard 384x family of controllers and offers significantly improved performance. Features include low operating current, 60µA start-up current, adjustable operating frequency to 2MHz, and high peak current drive capability with 20ns rise and fall times.

The ISL78215 is tested to AEC-Q100 specifications.

Features

- 1A MOSFET Gate Driver
- 60µA Start-up Current, 100µA Maximum
- 25ns Propagation Delay Current Sense to Output
- Fast Transient Response with Peak Current Mode Control
- Adjustable Switching Frequency to 2MHz
- 20ns Rise and Fall Times with 1nF Output Load
- Trimmed Timing Capacitor Discharge Current for Accurate Deadtime/Maximum Duty Cycle Control
- High Bandwidth Error Amplifier
- Tight Tolerance Voltage Reference Over Line, Load, and Temperature
- Tight Tolerance Current Limit Threshold
- Pb-Free (RoHS Compliant)
- AEC-Q100 Tested

Applications

- Automotive Power
- Telecom and Datacom Power
- Wireless Base Station Power
- File Server Power
- Industrial Power Systems
- PC Power Supplies
- Isolated Buck and Flyback Regulators
- Boost Regulators

Pin Configuration

Pin Description

| PIN | SYMBOL | DESCRIPTION |
|-----|--------|--|
| 1 | COMP | COMP is the output of the error amplifier and the input of the PWM comparator. The control loop frequency compensation network is connected between the COMP and FB pins. |
| 2 | FB | The output voltage feedback is connected to the inverting input of the error amplifier through this pin. The non-inverting input of the error amplifier is internally tied to a reference voltage. |
| 3 | CS | This is the current sense input to the PWM comparator. The range of the input signal is nominally 0V to 1.0V and has an internal offset of 100mV. |
| 4 | RTCT | <p>This is the oscillator timing control pin. The operational frequency and maximum duty cycle are set by connecting a resistor, RT, between VREF and this pin and a timing capacitor, CT, from this pin to GND. The oscillator produces a sawtooth waveform with a programmable frequency range up to 2.0MHz. The charge time, tC, the discharge time, tD, the switching frequency, f, and the maximum duty cycle, Dmax, can be calculated from Equations 1, 2, 3 and 4:</p> $t_C \approx 0.583 \cdot RT \cdot CT \quad (\text{EQ. 1})$ $t_D \approx -RT \cdot CT \cdot \ln\left(\frac{0.0083 \cdot RT - 4.3}{0.0083 \cdot RT - 2.4}\right) \quad (\text{EQ. 2})$ $f = 1/(t_C + t_D) \quad (\text{EQ. 3})$ $D = t_C \cdot f \quad (\text{EQ. 4})$ <p>Figure 4 may be used as a guideline in selecting the capacitor and resistor values required for a given frequency.</p> |
| 5 | GND | GND is the power and small signal reference ground for all functions. |
| 6 | OUT | This is the drive output to the power switching device. It is a high current output capable of driving the gate of a power MOSFET with peak currents of 1.0A. |
| 7 | VDD | <p>VDD is the power connection for the device. The total supply current will depend on the load applied to OUT. Total IDD current is the sum of the operating current and the average output current. Knowing the operating frequency, f, and the MOSFET gate charge, Qg, the average output current can be calculated in Equation 5:</p> $I_{OUT} = Qg \times f \quad (\text{EQ. 5})$ <p>To optimize noise immunity, bypass VDD to GND with a ceramic capacitor as close to the VDD and GND pins as possible.</p> |
| 8 | VREF | The 5.00V reference voltage output. +1.0/-1.5% tolerance over line, load and operating temperature. Bypass to GND with a 0.1μF to 3.3μF capacitor to filter this output as needed. |

Ordering Information

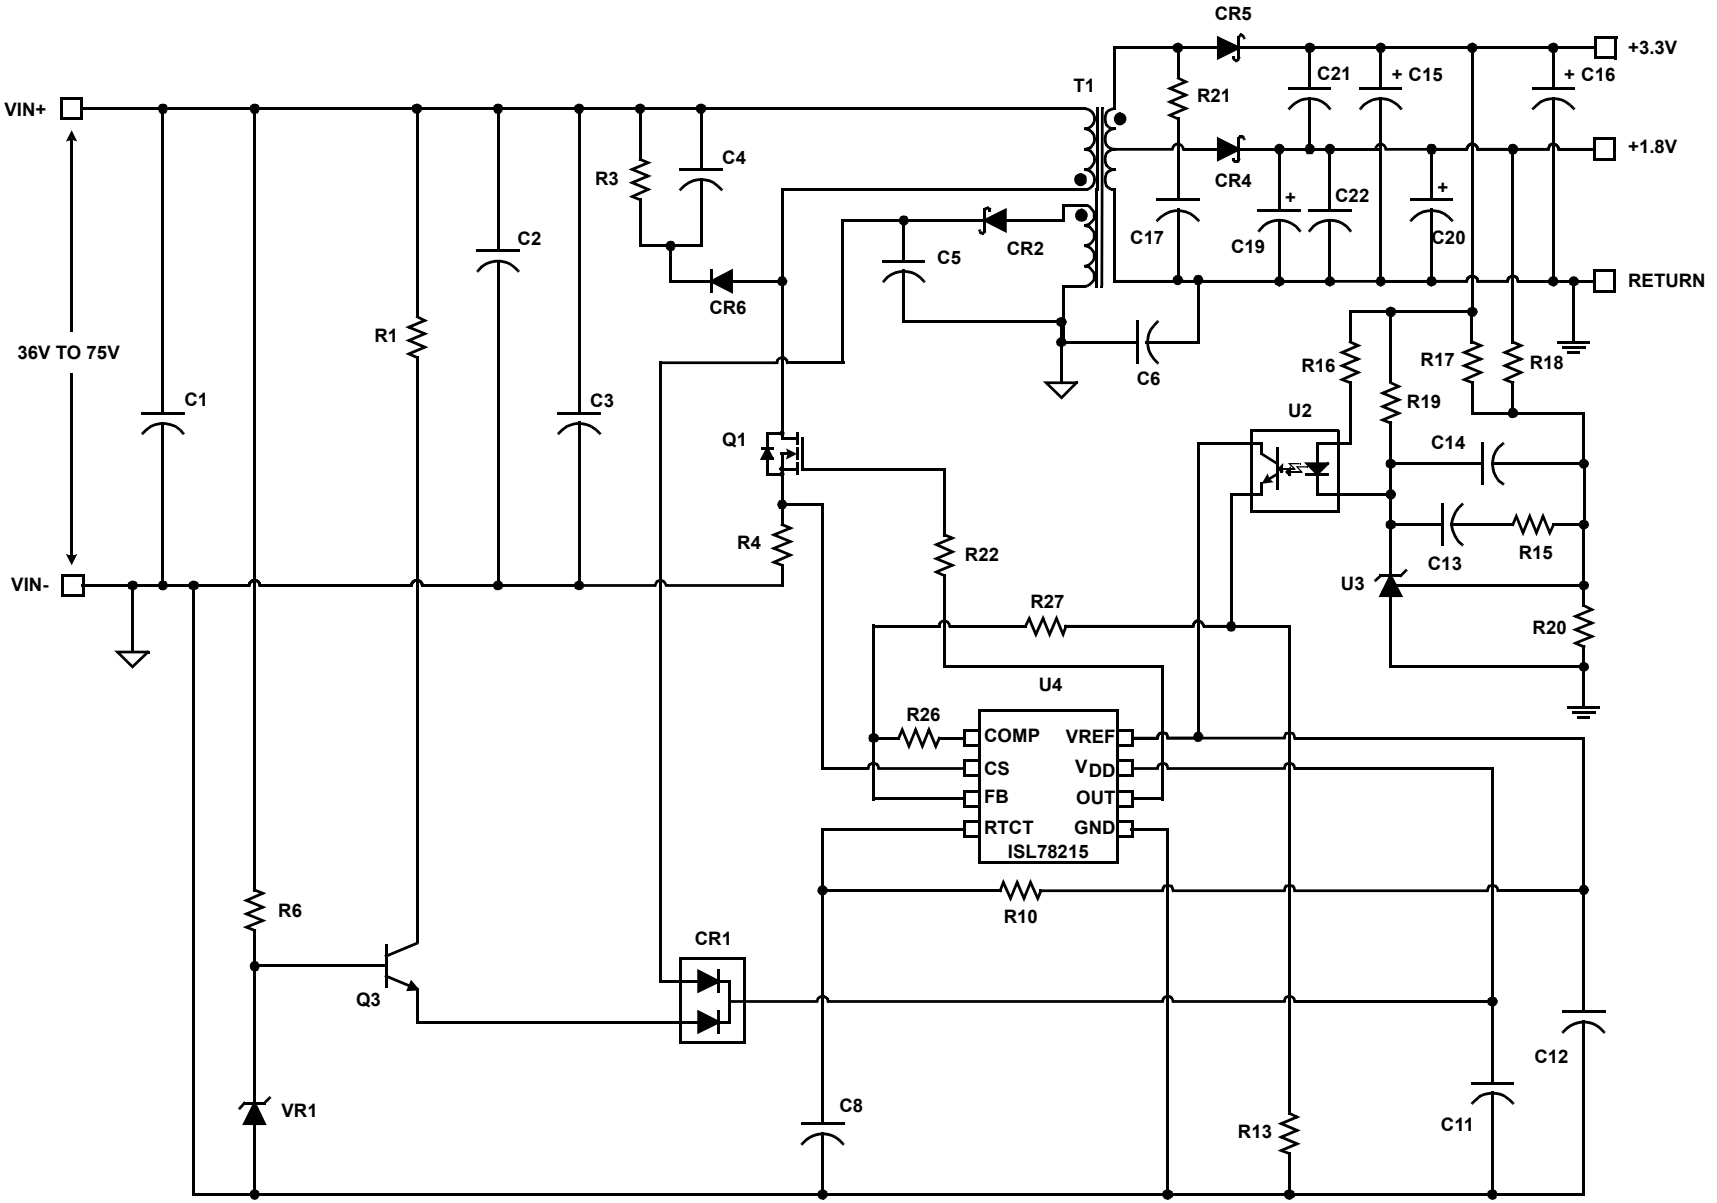

| PART NUMBER (Notes 2, 3) | PART MARKING | TEMP RANGE (°C) | PACKAGE (Pb-free) | PKG. DWG. # |
|-----------------------------|--------------|--------------------|----------------------|----------------|
| ISL78215AUZ | 78215 | -40 to +105 | 8 Ld MSOP | M8.118 |
| ISL78215AUZ-T (Note 1) | 78215 | -40 to +105 | 8 Ld MSOP | M8.118 |

1. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL78215](#). For more information on MSL please see techbrief [TB363](#).

Functional Block Diagram

Typical Application - 48V Input Dual Output Flyback

Typical Application - Boost Converter

Absolute Maximum Ratings

| | |
|---|-------------------------------|
| Supply Voltage, V_{DD} | GND - 0.3V to +20.0V |
| OUT | GND - 0.3V to V_{DD} + 0.3V |
| Signal Pins | GND - 0.3V to 6.0V |
| Peak GATE Current | 1A |
| ESD Rating | |
| Human Body Model (Tested per JESD22-A11) | 2500V |
| Machine Model (Tested per JESD22-C101) | 75V |
| Charged Device Model (Tested per JESD22-A115) | 1500V |

Thermal Information

| | | |
|---|---|---|
| Thermal Resistance (Typical) | θ_{JA} ($^{\circ}\text{C}/\text{W}$) | θ_{JC} ($^{\circ}\text{C}/\text{W}$) |
| MSOP Package (Notes 4, 5) | 170 | 60 |
| Maximum Junction Temperature | -55 $^{\circ}\text{C}$ to +150 $^{\circ}\text{C}$ | |
| Maximum Storage Temperature Range | -65 $^{\circ}\text{C}$ to +150 $^{\circ}\text{C}$ | |
| Pb-Free Reflow Profile | see link below | |
| | http://www.intersil.com/pbfree/Pb-FreeReflow.asp | |

Operating Conditions

| | |
|--|---|
| Temperature Range | -40 $^{\circ}\text{C}$ to +105 $^{\circ}\text{C}$ |
| Supply Voltage Range (Typical, Note 6) | 7.5V to 18V |

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
- For θ_{JC} , the "case temp" location is taken at the package top center.
- All voltages are with respect to GND.

Electrical Specifications Recommended operating conditions unless otherwise noted. Refer to "Functional Block Diagram" on page 3 and "Typical Application" schematics on page 4 and 5. $V_{DD} = 15\text{V}$ (Note 10), $R_t = 10\text{k}\Omega$, $C_t = 3.3\text{nF}$, $T_A = -40$ to +105 $^{\circ}\text{C}$, Typical values are at $T_A = +25^{\circ}\text{C}$. **Boldface limits apply over the operating temperature range, -40 $^{\circ}\text{C}$ to +105 $^{\circ}\text{C}$.**

| PARAMETER | TEST CONDITIONS | MIN (Note 7) | TYP | MAX (Note 7) | UNITS |
|--|--|-----------------|-------|--------------------|---------------|

| Maximum Duty Cycle | | 47 | 48 | | % |
| Minimum Duty Cycle | | - | - | 0 | % |

NOTES:

- Parameters with MIN and/or MAX limits are 100% tested at $+25^\circ C$, unless otherwise specified. Temperature limits established by characterization and are not production tested.
- This is the V_{DD} current consumed when the device is active but not switching. Does not include gate drive current.
- Limits established by characterization and are not production tested.
- Adjust V_{DD} above the start threshold and then lower to 15V.

Functional Description

Features

The ISL78215 current mode PWMs make an ideal choice for low-cost flyback and forward topology applications. With its greatly improved performance over industry standard parts, it is the obvious choice for new designs or existing designs which require updating.

Oscillator

The ISL78215 controllers have a sawtooth oscillator with a programmable frequency range to 2MHz, which can be programmed with a resistor from VREF and a capacitor to GND on the RTCT pin. (Please refer to Figure 4 for the resistor and capacitance required for a given frequency.)

Soft-Start Operation

Soft-start must be implemented externally. One method, illustrated in Figure 5, clamps the voltage on COMP.

FIGURE 5. SOFT-START

Gate Drive

The ISL78215 is capable of sourcing and sinking 1A peak current. To limit the peak current through the IC, an optional external resistor may be placed between the totem-pole output of the IC (OUT pin) and the gate of the MOSFET. This small series resistor also damps any oscillations caused by the resonant tank of the parasitic inductances in the traces of the board and the FET's input capacitance.

Slope Compensation

For applications where the maximum duty cycle is less than 50%, slope compensation may be used to improve noise immunity, particularly at lighter loads. The amount of slope compensation required for noise immunity is determined empirically, but is generally about 10% of the full scale current feedback signal. For applications where the duty cycle is greater than 50%, slope compensation is required to prevent instability. The minimum amount of slope compensation required corresponds to 1/2 the inductor downslope. Adding excessive slope compensation, however, results in a control loop that behaves more as a voltage mode controller than as a current mode controller.

FIGURE 6. CURRENT SENSE DOWNSLOPE

Slope compensation may be added to the CS signal shown in Figure 7.

FIGURE 7. SLOPE COMPENSATION

Fault Conditions

A Fault condition occurs if VREF falls below 4.65V. When a Fault is detected, OUT is disabled. When VREF exceeds 4.80V, the Fault condition clears, and OUT is enabled.

Ground Plane Requirements

Careful layout is essential for satisfactory operation of the device. A good ground plane must be employed. A unique section of the ground plane must be designated for high di/dt currents associated with the output stage. V_{DD} should be bypassed directly to GND with good high frequency capacitors.

About Intersil

Intersil Corporation is a leader in the design and manufacture of high-performance analog, mixed-signal and power management semiconductors. The company's products address some of the largest markets within the industrial and infrastructure, personal computing and high-end consumer markets. For more information about Intersil, visit our website at www.intersil.com.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at www.intersil.com. You may report errors or suggestions for improving this datasheet by visiting www.intersil.com/en/support/ask-an-expert.html. Reliability reports are also available from our website at <http://www.intersil.com/en/support/qualandreliability.html#reliability>

8 LEAD MINI SMALL OUTLINE PLASTIC PACKAGE

Rev 4, 7/11

NOTES:

1. Dimensions are in millimeters.
2. Dimensioning and tolerancing conform to JEDEC MO-187-AA and AMSEY14.5m-1994.
3. Plastic or metal protrusions of 0.15mm max per side are not included.
4. Plastic interlead protrusions of 0.15mm max per side are not included.

5. Dimensions are measured at Datum Plane "H".

6. Dimensions in () are for reference only.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
