

Description

The GM339 consists of four independent precision voltage comparators which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. These comparators also have a unique characteristic. In that, the input common-mode voltage range includes ground, even though operated from a single power supply voltage.

Application areas include limit comparators, simple analog to digital converters; pulse, square wave and time delay generators; wide range VCO; MOS clock timers; multivibrators and high voltage digital logic gates. The GM339 are designed to directly interface with TTL and CMOS. When operated from both plus and minus power supplies, the GM339 will directly interface with MOS logic, where their low power drain is a distinct advantage over standard comparators.

The GM339 is available in DIP-8 and SOP-8 packages.

Features

- ◆ Single- supply Range: $\pm 1.0V$ to $\pm 18V$
- ◆ Wide supply voltage range: $\pm 2.0V$ to $\pm 36V$
- ◆ Very low supply current drain (0.4 mA) - independent of supply voltage
- ◆ Low input biasing current: 25 nA
- ◆ Low input offset current: ± 5 nA
- ◆ Maximum offset voltage: ± 3 mV
- ◆ Input common-mode voltage range includes ground
- ◆ Differential input voltage range equal to the power supply voltage
- ◆ Low output saturation voltage: 250 mV at 4 mA
- ◆ Output voltage compatible with TTL, DTL, ECL, MOS and CMOS logic systems

All characteristics are measured under open loop conditions with zero common-mode input voltage unless otherwise specified.
"MAX" V_{CC} for testing purposes is 30V. Full range is 0°C to 70°C.

** The voltage at either input or common - mode should not be allowed to go negative by more than 0.3V. The upper end of the common - mode voltage range is $V_{CC} - 1.5V$, but either or both inputs can go to 30V without damage.

Note 1: C_L includes probe and jig capacitance. The response time specified is the interval between the input step function and the instant when the output crosses 1.4V.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
