

## Description

GM7230 of regulators provides all the active functions for a step-down (buck) switching regulator, and drives 3A load with excellent line and load regulation. GM7230's is available in fixed output voltages of 3.3V, 5V, 12V, and a versatile Adjustable output version.

These regulators are simple to use and require a minimum number of external components. Features include internal frequency compensation and a fixed-frequency oscillator. The GM7230 is high-efficiency replacements for popular three-terminal linear regulators, and is requiring a smaller heatsink or even no heatsink.

GM7230 performs well with standard inductors from several manufacturers, and simplifying the design of switch-mode power supplies. GM7230 guarantees  $\pm 4\%$  tolerance on output voltage within specified input voltages and output load conditions, and  $\pm 15\%$  on the oscillator frequency.

External shutdown is included with 80  $\mu\text{A}$  (typical) standby current. The output switch has cycle-by-cycle current limiting as well as thermal shutdown for full protection under fault conditions.

GM7230 operates at a switching frequency of 150 kHz thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Available in a standard 5-lead TO-220 package with several different lead bend options, and a 5-lead TO-263 surface mount package.

## Features

- ◆ 3.3V, 5V, 12V and Adjustable output versions
- ◆ Adjustable version output voltage range 1.23V to 37V  $\pm 4\%$  max over line and load conditions
- ◆ 3A output current
- ◆ Input voltage range up to 40V
- ◆ Requires only 4 external components
- ◆ High efficiency
- ◆ TTL shutdown capability, low power standby mode
- ◆ Low power standby mode, IQ typically 80  $\mu\text{A}$
- ◆ Thermal shutdown, current limit protection
- ◆ Uses standard inductors
- ◆ 150 kHz fixed frequency internal oscillator

## Application

Pre-regulator for linear regulators

High-efficiency step-down buck regulator

On-card/board switching regulators

Positive to negative converter (buck-boost)

## TYPICAL APPLICATIONS

#### ◆ MARKING INFORMATION & PIN CONFIGURATIONS

V V / VVV= Output Voltage  
(33=3.3V , 12=12V, A=Adj)  
A = Assembly Location  
Y = Year  
W W = Weekly

#### ◆ ORDERING INFORMATION

| Ordering Number | Output Voltage | Package   | Shipping               |
|-----------------|----------------|-----------|------------------------|
| GM7230-ATB5T    | A d j          | TO-220-5  | 50 Units / Tube        |
| GM7230-ATB5BT   | A d j          | TO-220-5B | 50 Units / Tube        |

**Note 1:** Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not guarantee specific performance limits. For guaranteed specifications and test conditions, see the Electrical Characteristics.

**Note 2:** The human body model is a 100 pF capacitor discharged through a 1.5k resistor into each pin.

**Note 3:** Typical numbers are at  $25^\circ\text{C}$  and represent the most likely norm.

**Note 4:** All limits guaranteed at room temperature (standard type face) and at temperature extremes (bold type face). All room temperature limits are 100% production tested. All limits at temperature extremes are guaranteed via correlation using standard Statistical Quality Control (SQC) methods. All limits are used to calculate Average Outgoing Quality Level (AOQL).

**Note 5:** External components such as the catch diode, inductor, input and output capacitors, and voltage programming resistors can affect switching regulator system performance. When the GM7230 is used as shown in the Figure 1 test circuit, system performance will be as shown in system parameters section of Electrical Characteristics.

**Note 6:** The switching frequency is reduced when the second stage current limit is activated.

**Note 7:** No diode, inductor or capacitor connected to output pin.

**Note 8:** Feedback pin removed from output and connected to 0V to force the output transistor switch ON.

**Note 9:** Feedback pin removed from output and connected to 12V for the 3.3V, 5V, and the ADJ. version, and 15V for the 12V version, to force the output transistor switch OFF.

**Note 10:**  $V_{IN} = 40\text{V}$ .

**Note 11:** Junction to ambient thermal resistance (no external heat sink) for the TO-220 package mounted vertically, with the leads soldered to a printed circuit board with (1 oz.) copper area of approximately  $1\text{ in}^2$ .

**Note 12:** Junction to ambient thermal resistance with the TO-263 package tab soldered to a single printed circuit board with  $0.5\text{ in}^2$  of (1 oz.) copper area.

**Note 13:** Junction to ambient thermal resistance with the TO-263 package tab soldered to a single sided printed circuit board with  $2.5\text{ in}^2$  of (1 oz.) copper area.

**Note 14:** Junction to ambient thermal resistance with the TO-263 package tab soldered to a double sided printed circuit board with  $3\text{ in}^2$  of (1 oz.) copper area on GM7230 side of the board, and approximately  $16\text{ in}^2$  of copper on the other side of the p-c board.

#### ◆ TEST CIRCUIT AND LAYOUT GUIDELINES

Careful layout is important with any switching regulator. Rapidly switching currents associated with wiring inductance generate voltage transients which can cause problems. To minimize inductance and ground loops, the lengths of the leads indicated by heavy lines in Figure 1 below should be kept as short as possible. Single-point grounding (as indicated in Figure 1) or ground plane construction should be used for best results. When using the Adjustable version, place the programming resistors as close as possible to Gm7230, to keep the sensitive feedback wiring short.

Figure 1(a). Fixed Output Voltage Versions

$C_{IN}$  - 470  $\mu$ F, 50V, Aluminum Electrolytic

$C_{OUT}$  - 220  $\mu$ F, 25V, Aluminum Electrolytic

D1 - 5A, 40V Schottky

L1 - 68  $\mu$ H, 3L Electronic Corp. TC-680M-3A-5026

**Figure 1(b). Adjustable Output Voltage Versions**

$$V_{OUT} = V_{REF} \left( 1 + \frac{R2}{R1} \right)$$

$$R2 = R1 \left( \frac{V_{OUT}}{V_{REF}} - 1 \right)$$

where  $V_{REF} = 1.23V$ ,  $R1$  approximately  $1k\Omega$ , 1%

$C_{IN}$  - 470  $\mu F$ , 50V, Aluminum Electrolytic

$C_{OUT}$  - 220  $\mu F$ , 25V, Aluminum Electrolytic

D1 - 5A, 40V Schottky

L1 - 68  $\mu H$ , 3L Electronic Corp. TC-680M-3A-5026

R1 - 1k $\Omega$ , 1%

$V_{OUT} = 5V$ , R2 = 3.06k $\Omega$ , 1%

**Вы можете приобрести в компании MosChip.**

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
