

PI3HDX1204B1

HDMI 2.0 6Gbps Limiting ReDriver with High EQ, Low Jitter and DP++ Level Shift

Description

PI3HDX1204B1 is suitable for HDMI 2.0 6.0 Gbps ReDriver with programmable high equalization, output swing and de-emphasis control mode. Max EQ is +22dB @ 6Gbps and can deliver 2x better additive jitter performance than other traditional ReDriver.

In addition, it can support the Dual-mode DisplayPort Level Shifter application for HDMI 2.0 compliant output signals.

The device EQ/SW/De-emphasis configuration can be supported by either the pin-strapping or the I²C programming to optimize differential signal performance over the variety of physical mediums.

Features

- HDMI 2.0 compliant Limiting-type Redriver to compensate high insertion loss of the long TMDS signal transmission
- Support Dual-mode DP HBR3 to HDMI 2.0 Level Shifting
- Double the jitter performance than conventional CMOS-process redriver
- Input EQ support 16 steps up to +22.2dB @ 3GHz (6 Gbps), 4 steps De-emphasis and 4 steps output voltage swing setting
- Independent each channel configuration for Equalization, Output Swing and De-emphasis
- Built-in channel activity detector with selectable input termination between 50Ω to V_{DD} and 200kΩ to V_{DD}
- Pin Strap and I²C selectable device programming mode support
- Supply Voltage: 3.3V
- Industrial Temperature Range: -40°C to 85°C
- Packaging (Pb-free & Green): 42-contact TQFN (3.4x9mm)

Applications

- Notebooks, Desktops and AIO PCs
- HDMI Active cables
- Internal board connection inside Video system

Ordering Information

| Ordering Number | Package Code | Package Description |
|--------------------|--------------|--|
| PI3HDX1204B1 ZHE | ZH | Pb-free & Green 42-pin TQFN (3.5x9mm) |
| PI3HDX1204B1 ZHEX | ZH | Pb-free & Green 42-pin TQFN (3.5x9mm), Tape & Reel. |
| PI3HDX1204B1 ZHIEX | ZH | Industrial-temp, Pb-free & Green 42-pin TQFN (3.5x9mm), Tape & Reel. |

Suffix: I = Industrial Temp, E = Pb-free and Green, X = Tape/Reel

Revision History

| Revision | Description |
|-----------------|--|
| June 2016 | Electrical chapter: PI3HDX1204-B revision to improve TMDS clock rising and falling time from typ 50ps to 70ps. De-emp [1:0] range adjusted between 0 and -2.1dB. Package and pin-out are same as PI3HDX1204-B. |
| July 2016 | Application chapter: Updated reference schematics in application chapter. Add load switch AP2151 requirement to protect sink to source-side devices back drive. |
| Sep 2016 | Final datasheet release with package pin-out typo fixed - pin name 30, 37 and 38 |
| | |

2. Pin Configuration

2.1 Package Pin-out

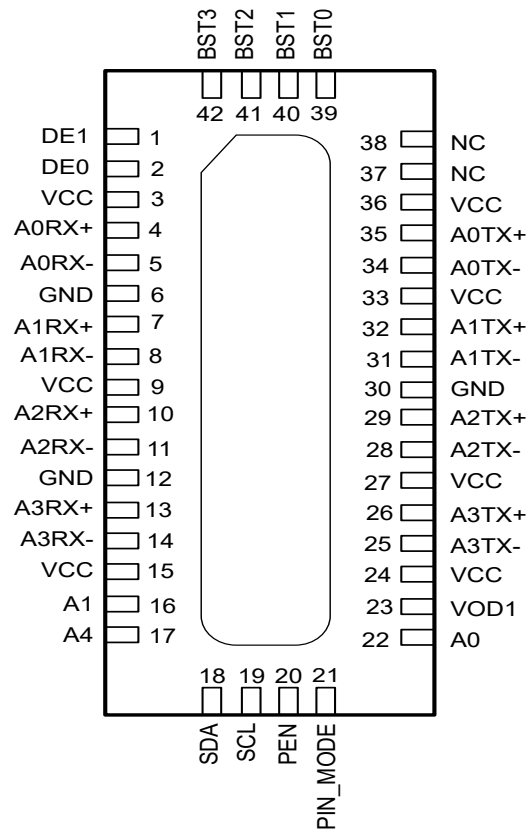

Figure 2-1 Package Pin-out (Top-Side View)

2.1 Pin Description

| Pin # | Pin Name | Type | Description |
|----------------------|------------------|------|---|
| Data Signals | | | |
| 4 5 | A0RX+ A0RX- | I | TMDS inputs for Channel A0, with internal 50-Ohm Pull-Up and ~200k-Ohm Pull-Up otherwise. |
| 35 34 | A0TX+ A0TX- | O | TMDS outputs for Channel A0, with internal 50-Ohm Pull-Up and ~2k-Ohm Pull-Up otherwise. |
| 7 8 | A1RX+ A1RX- | I | TMDS inputs for Channel A1, with internal 50-Ohm Pull-Up and ~200k-Ohm Pull-Up otherwise. |
| 32 31 | A1TX+ A1TX- | O | TMDS outputs for Channel A1, with internal 50-Ohm Pull-Up and ~2k-Ohm Pull-Up otherwise. |
| 10 11 | A2RX+ A2RX- | I | TMDS inputs for Channel A2, with internal 50-Ohm Pull-Up and ~200k-Ohm Pull-Up otherwise. |
| 29 28 | A2TX+ A2TX- | O | TMDS outputs for Channel A2, with internal 50-Ohm Pull-Up and ~2k-Ohm Pull-Up otherwise. |
| 13 14 | A3RX+ A3RX- | I | TMDS inputs for Channel A3, with internal 50-Ohm Pull-Up and ~200k-Ohm Pull-Up otherwise. |
| 26 25 | A3TX+ A3TX- | O | TMDS outputs for Channel A3, with internal 50-Ohm Pull-Up and ~2k-Ohm Pull-Up otherwise. |
| Control Signals | | | |
| 19 | SCL | I | I ² C Clock input. |
| 18 | SDA | I/O | I ² C Data input/output. |
| 17, 16, 22 | A4, A1, A0 | I | I ² C programmable address bits, with internal 100k-Ohm Pull-Up. |
| 20 | PEN | I | Power Enable with internal 100K-Ohm Pull-Up |
| 21 | Pin_Mode | I | Input with internal 100k-Ohm Pull-Up. When HIGH, each channel is programmed by the external pin voltage. When LOW, each channel is programmed by the data stored in the I ² C bus. |
| 42 41 40 39 | BST[3:0] | I | Inputs with internal 100k-Ohm Pull-Up. This pins set the amount of Equalizer Boost in all channel when Pin mode is HIGH. |
| 23 | VOD1 | I | Inputs with internal 100k-Ohm Pull-Up. This pin sets the output Voltage Level in all channel when Pin mode is HIGH. |
| 1 2 | DE[1:0] | I | Inputs with internal 100k-Ohm Pull-Up. This pins set the output De-Emphasis Level in all channel when Pin_Mode is HIGH. |
| 38 37 | NC | NC | No Connect |

3. Functional Description

3.1 Functional Block Diagram

Figure 3-1 Functional block diagram

3.2 Function settings

3.2.1 Output Termination Detector

On power up or when PEN becomes true, the output resistance is set to 2K ohms, and the input resistance is set to 200K ohms. The device continually looks to detect an external 50 ohm termination resistor on a per channel basis. If no 50 ohms is detected in the first 5ms of time, the channel is continually polled with 5ms detection cycle until detection occurs.

3.2.2 Input Activity Detector

When the input voltage on individual channel basis falls below de-assert threshold VTH-, the output is driven to the common mode voltage so as to eliminate output chatter. When the input voltage is higher than assert threshold VTH+, the channel is resumed immediately.

3.2.3 Power Enable function

One pin control or I2C control, when PEN is set to low, the IC goes into power down mode, both input and output termination set to 200K and 2K respectively. Individual Channel Enabling is done through the I2C register programming.

3.2.4 Equalization Setting

BST[3:0] are the selection pins for the equalization selection for each channel.

Table 3-1. Table 1. Equalization Setting

| BST3 | BST2 | BST1 | BST0 | 6Gbps (3GHz) | 8Gbps (4GHz) |
|------|------|------|------|--------------|--------------|
| 0 | 0 | 0 | 0 | 0.25 dB | 0.4 dB |
| 0 | 0 | 0 | 1 | 0.8 dB | 1.1 dB |
| 0 | 0 | 1 | 0 | 1.1 dB | 1.6 dB |
| 0 | 0 | 1 | 1 | 2.2 dB | 3.1 dB |
| 0 | 1 | 0 | 0 | 4.1 dB | 5.4 dB |
| 0 | 1 | 0 | 1 | 7.1 dB | 8.9 dB |
| 0 | 1 | 1 | 0 | 9.0 dB | 10.8 dB |
| 0 | 1 | 1 | 1 | 10.3 dB | 12.2 dB |
| 1 | 0 | 0 | 0 | 11.8 dB | 13.8 dB |
| 1 | 0 | 0 | 1 | 13.9 dB | 15.8 dB |
| 1 | 0 | 1 | 0 | 15.3 dB | 17.3 dB |
| 1 | 0 | 1 | 1 | 16.9 dB | 19.0 dB |
| 1 | 1 | 0 | 0 | 17.9 dB | 20.0 dB |
| 1 | 1 | 0 | 1 | 19.2 dB | 21.3 dB |
| 1 | 1 | 1 | 0 | 20.5 dB | 22.6 dB |
| 1 | 1 | 1 | 1 | 22.2 dB | 24.3 dB |

3.2.5 Output De-emphasis Setting

De-emphasis Setting: DE[1:0] are the selection bits for the de-emphasis value.

Table 3-2. Output De-emphasis Setting

| DE1 | DE0 | De-emphasis |
|-----|-----|-------------|
| 0 | 0 | 0 dB |
| 0 | 1 | -0.5 dB |
| 1 | 0 | -0.7 dB |
| 1 | 1 | -1.0 dB |

3.2.6 Swing Setting

Swing Setting: VOD1 is the selection bit for the output swing voltage value. VOD0 fixed as 1.

Table 3-3. Output Voltage Swing Setting

| VOD1 | VOD0 | Output Voltage Swing |
|------|------|----------------------|
| 0 | 1 | 0.85 Vppd |
| 1 | 1 | 1.15 Vppd |

3.2.7 Activity Detector Threshold

Threshold Setting: VTH[1:0] are the selection bits for the activity detector threshold.

Table 3-4. Activity Detector Threshold Setting

| VTH1 | VTH0 | VTH+ (Assert threshold) | VTH- (De-assert threshold) | Units |
|------|------|-------------------------|----------------------------|-------|
| 0 | 0 | 130 | 30 | mVppd |
| 0 | 1 | 150 | 50 | |
| 1 | 0 | 170 | 70 | |
| 1 | 1 | 210 | 110 | |

BYTE B-F : RESERVED

4.2 I²C Data Transfer Sequence

Read sequence

Write sequence

Combined sequence

Notes:

1. only block read and block write from the lowest byte are supported for this application.
2. for some I²C application, an offset address byte will be presented at the second byte in write command, which is called dummy byte here and will be simply ignored in this application for correct interoperation.

5. Electrical

5.1 Absolute Maximum Ratings

| | |
|------------------------------------|----------------------------|
| Supply Voltage to Ground Potential | -0.5 V to +4.6 V |
| DC SIG Voltage | -0.5 V to $V_{DD} + 0.5$ V |
| Output Current | -25 mA to +25 mA |
| Power Dissipation Continuous | 2.1 W |
| ESD, HBM | -2 kV to +2 kV |
| Storage Temperature | -65 °C to +150 °C |

Note

(1) Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

5.2 Recommended Operation Conditions

| Parameter | Min. | Typ. | Max | Units |
|--|------|------|-----|-------|
| Power supply voltage (VDD to GND) ⁽¹⁾ | 3.0 | 3.3 | 3.6 | V |
| I2C (SDA, SCL) | | | 3.6 | V |
| Supply Noise Tolerance up to 25 MHz ⁽²⁾ | | | 100 | mVp-p |
| Ambient Temperature | -40 | 25 | 85 | °C |

Note

(1) Typical parameters are measured at $V_{DD} = 3.3 \pm 0.3$ V, $T_A = 25^\circ\text{C}$. They are for the reference purposes, and are not production-tested

(2) Allow supply noise (mVp-p sine wave) under typical condition

5.3 DC/AC Characteristics

5.3.1 LVCMOS DC specifications

| Symbol | Parameter | Conditions | Min. | Typ. | Max | Unit |
|-----------|-------------------------------------|------------|------------------|------|------------------|------|
| V_{IH} | DC input logic high | | $V_{DD}/2 + 0.7$ | | $V_{DD} + 0.3$ | V |
| V_{IL} | DC input logic low | | -0.3 | | $V_{DD}/2 - 0.7$ | V |
| V_{OH} | At $I_{OH} = -200\mu\text{A}$ | | $V_{DD} + 0.2$ | | | V |
| V_{OL} | At $I_{OL} = -200\mu\text{A}$ | | | | 0.2 | V |
| V_{hys} | Hysteresis of Schmitt trigger input | | 0.8 | | | V |

5.3.2 Power Dissipation

| Symbol | Parameter | Conditions | Min. | Typ. | Max. | Units |
|------------|---------------------------|---|------|------|------|-------|
| I_{max} | Supply Current | PEN = 1, EQ = 0dB, De-emphasis = 0dB, All 4 channels 0.8V Swing | | 265 | 325 | mA |
| | | PEN = 1, EQ = 0dB, De-emphasis = 0dB, All 4 channels 1.3V Swing | | 300 | 350 | mA |
| I_{DDQ} | Quiescent Supply Current | PEN=0, TMDS Output Disable | | 0.17 | | mA |
| P_{idle} | Standby Mode Supply Power | PEN=0, All channels disable | | 0.8 | | mA |

PI3HDX1204B1
5.3.3 Package power ratings

| Package | Theta Ja(still air) (°C/W) | Theta Jc (°C/W) | Max. Power Dissipation Rating (Ta ≤ 70°) |
|--------------------|----------------------------|-----------------|--|
| 42-pin TQFN (ZH42) | 33.69 | 15.17 | 1.63W |

5.3.4 TMDS Differential Pins

| Symbol | Parameter | Conditions | Min. | Typ. | Max. | Units |
|--------------------|--|---|----------------------|------|----------------------|-------|
| V _{OH} | Single-ended High Level Output Voltage | V _{DD} = 3.3 V, R _{out} = 50 Ohm | V _{DD} -10 | | V _{DD} +10 | mV |
| V _{OL} | Single-ended Low Level Output Voltage | | V _{DD} -600 | | V _{DD} -400 | mV |
| V _{swing} | Output Voltage Swing | | 700 | | 1300 | mVppd |
| R _T | Input Termination Resistance | V _{IN} = 2.9V | 45 | 50 | 55 | Ohm |
| I _{OZ} | Leakage Current with Hi-Z I/O | V _{DD} = 3.6V | | | 10 | uA |

5.3.5 Switching Characteristics

| Symbol | Parameter | Conditions | Min. | Typ. | Max. | Units |
|-----------------------|--|---|------|------|------|-------|
| T _{pd} | Propagation Delay | | | | 2000 | ps |
| T _r | Tx Signal Rise Time (20% - 80%) | V _{DD} = 3.3V, R _T = 50 Ohm, Pre-/De-emp = 0 dB | | 70 | | ps |
| T _f | Tx Signal Fall Time (80% - 20%) | | | 70 | | ps |
| T _{sk(p)} | Pulse Skew | | | 10 | 50 | ps |
| T _{sk(D)} | Intra-pair Differential Skew | | | 23 | 50 | ps |
| T _{sk(O)} | Inter-pair Differential Skew | | | | 100 | ps |
| T _{jit-Clk} | Peak-to-peak Output Jitter for Clock channel | Pre-/De-emp = 0 dB Data Input = 6 Gbps HDMI Pattern, Clock input = 150 MHz | | 15 | 30 | ps |
| T _{jit-Data} | Peak-to-peak Output Jitter for Data channels | | | 18 | 50 | ps |
| t _{sx} | Select to switch Output | | | | 10 | ns |
| t _{en} | Enable Time | | | | 200 | ns |
| t _{dis} | Disable Time | | | | 10 | ns |

5.3.6 Signal Detector

| Symbol | Parameter | Conditions | Min. | Typ. | Max. | Units |
|------------------|--|------------------------|------|------|------|-------|
| V _{th+} | Assert Threshold of Signal Detector | Signal swing @ 3GHz | 130 | | 210 | mVppd |
| V _{th-} | De-assert Threshold of Signal Detector | Signal swing @ 100 MHz | 30 | | 110 | mVppd |

PI3HDX1204B1

Note:

- (1) Recommended maximum capacitance load per bus segment is 400pF.
- (2) Compliant to I2C physical layer specification.
- (3) Ensured by Design. Parameter not tested in production.

6. Application/Implementation

6.1 Source Application

PI3HDX1204B1 is designed to accept AC-coupled as well as DC-coupled main link signals. When a dual-mode DP source is connected to the input of PI3HDX1204B1 in a source application, AC coupling capacitors must be placed at the input side.

Figure 6-1 PI3HDX1204B1 Source Application Circuit

6.1.1 ESD Protectors on Output TMDS

As 8kV contact ESD is commonly required, ESD protectors are implemented at the output TMDS pins of PI3HDX1204B1 for source application. ESD8104 HDMI2.0 ESD protector can be considered to protect the 3.3V TMDS paths as its reverse working voltage is 3.3V.

6.1.2 Extra Component for Rise/fall Time Control

Per HDMI2.0 specification, rise/fall time of TMDS clock is kept at minimal 75ps while that of TMDS data is decreased to minimal 42.5ps if data rate is between 3.4Gbps and 6Gbps.

Table 7-3 Source TMDS Electrical - 6G – T_{RISE} , T_{FALL} Requirements

| Reference | Requirement |
|---|---|
| [HDMI 2.0: Table 6-2] AC Characteristics for $3.4 \text{ Gbps} < R_{bit} \leq 6.0 \text{ Gbps}$ at TP1 | Rise/Fall time: Data (20% to 80%): $\geq 42.5 \text{ ps}$ Rise/Fall time: Clock (20% to 80%): $\geq 75 \text{ ps}$ |

Figure 6-2 HDMI2.0 Trise/fall Requirement

PI3HDX1204B1 is designed to meet the rise/fall time of TMDS data. If output trace length is short, maybe 1” only, common-mode choke or external inductor can be considered for slowing down the rise/fall time for TMDS clock of PI3HDX1204B1.

6.1.3 Leakage Blockage for VOFF Test

When performing VOFF test specified in HDMI 1.4a Compliance Test Specification, each output TMDS of PI3HDX1204B1 will be pulled to 3.3V via an external 50kΩ resistor. In this case, current will pass through an internal ESD protector at the output TMDS pin of PI3HDX1204B1 and leakage will be found at VCC pin of PI3HDX1204B1.

Figure 6-3 HDMI VOFF Test Setup

| Test ID 7-3: TMDS – V_{OFF} | |
|--|--|
| Reference | Requirement |
| [HDMI: Table 4-23] Source DC Characteristics at TP1 | TMDS single-ended standby (off) output voltage, V_{OFF} must be within $AV_{CC} \pm 10\text{mVolts}$. |

Figure 6-4 HDMI VOFF Requirement

To avoid this leakage, AP2151A power switch can be employed between the main 3.3V supply on a system and the VCC power plane of PI3HDX1204B1. Below is an example borrowed from an evaluation board schematic.

PI3HDX1204B1

Figure 6-5 Power Distribution Switch Example

6.2 Sink Application

PI3HDX1204B1 can also be employed in a sink application as it offers a range of equalization setting.

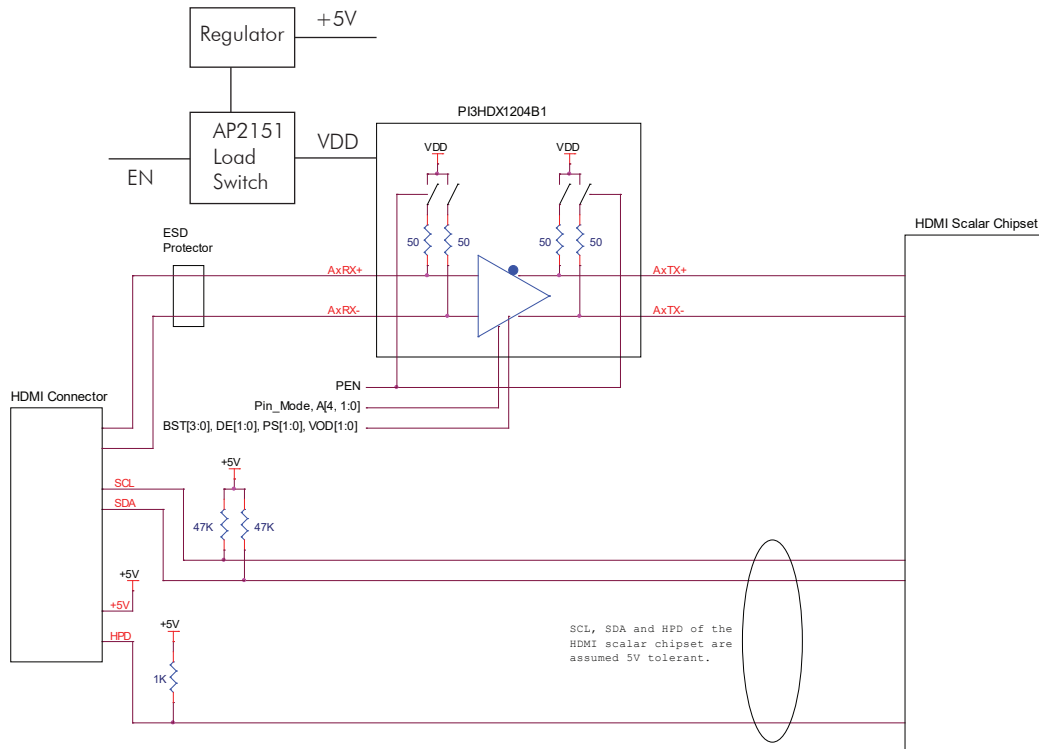

Figure 6-6 PI3HDX1204B1 Sink Application Circuit

6.2.1 ESD Protectors on Output TMDS

ESD protector selection guidance for source and sink applications is the same.

6.4 Product Layout Guideline

6.4.1 AC Coupling Capacitor

Below is an example of placing AC coupling capacitors on high-speed channels

Figure 6-8 AC Coupling Capacitor Placement

6.4.2 Output Trace Length

To fulfill minimal 75ps rise/fall time requirement of TMDS clock, 1.5 – 4.5” TMDS trace length between PI3HDX1204B1 and HDMI connector for source application is recommended. This trace length varies with PCB trace width, characteristics of common-mode choke/ESD protector and connector quality. If trace width is 5 mil, 2.7 – 3.3” is recommended. Isolation space should be larger than 5 mil to minimize the crosstalk so thus jitter. Below is the PI3HDX1204B1 placement on its evaluation board.

Figure 6-9 Source-side placement near to the HDMI connectors

6.4.3 Differential Impedance (TDR)

Layout guideline especially for high-speed transmission is critical. Please refer to PI3DPxxx_PI3HDxxx_Layout Guideline for detailed recommendations. Differential impedance test is required for both source and sink applications per HDMI 2.0 specification.

PI3HDX1204B1

Table 7-17 Source TMDS Electrical - 6G – Differential Impedance Requirements

| Reference | Requirement |
|---|---|
| [HDMI 2.0: Table 6-3] Source Impedance Characteristics for (3.4 Gbps < R _{bit} ≤ 6.0 Gbps) at TP1 | Through Connection Impedance Δ: 100 Ω +/- 15% Δ single excursion is permitted out to a max/min of 100 Ω +/- 25% and of a duration less than 250 ps. Δ Impedance from TP1 to Source Termination Source Termination Impedance: 75 to 150 Ω |

Figure 6-10 HDMI2.0 Differential Impedance Requirement for Source Application

Table 8-7 Sink TMDS Electrical - 6G – Differential Impedance Requirements

| Reference | Requirement |
|---|--|
| [HDMI 2.0: Table 6-8] Sink Impedance Characteristics for (3.4 Gbps < R _{bit} ≤ 6.0 Gbps) at TP2 | Through Connection Impedance Δ: 100 Ω +/- 15% Δ A single excursion is permitted out to a max/min of 100 Ω ±25% and of duration less than 250 ps. Δ Impedance from TP2 to Sink Termination Sink Termination Impedance: 90 Ω to 110 Ω |

Figure 6-11 HDMI2.0 Differential Impedance Requirement for Sink Application

The PCB impedance immediately before and after an ESD protector must be adjusted to compensate the capacitance loading of the ESD protector. Below is an example designing RClamp0544M in PI3HDX1204B1 evaluation board. Trace impedances before and after the ESD protector are tuned to compensate the capacitance of RClamp0544M. Semtech's layout guideline is followed.

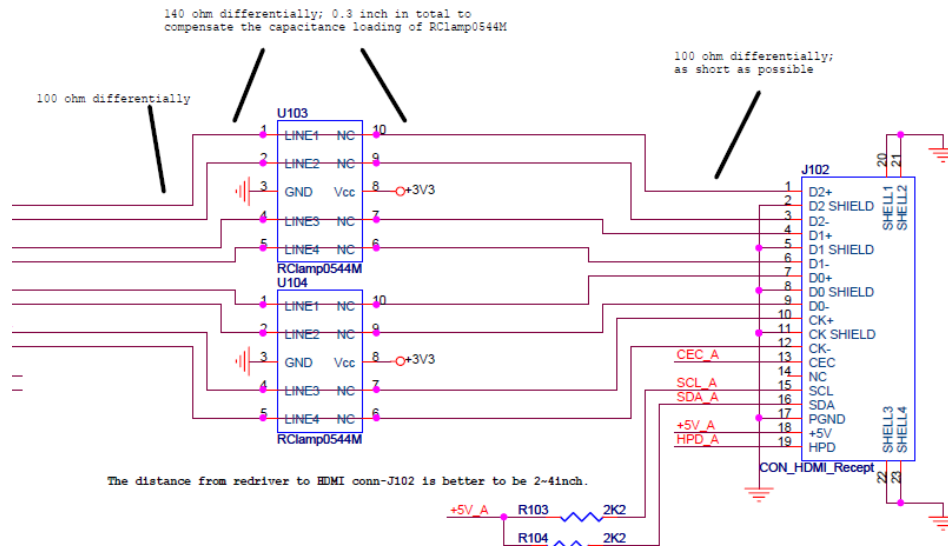

Figure 6-12 ESD Protector on PI3HDX1204B1 Source EVB

6.4.4 GND via on the thermal pad area

Several GND via are “MUST” required on thermal area. The via size is 12/24 mil. Below is the thermal pad via layout recommendation.

PI3HDX1204B1

Figure 6-13 Recommended Land patterns

6.5 General Layout Guideline

As transmission data rate increases rapidly, any flaws and/or mis-matches on PCB layout are amplified in terms of signal integrity. Layout guideline for high-speed transmission is highlighted in this application note.

6.5.1 Power and Ground

To provide a clean power supply for Pericom high-speed device, few recommendations are listed below:

- Power (VDD) and ground (GND) pins should be connected to corresponding power planes of the printed circuit board directly without passing through any resistor.
- The thickness of the PCB dielectric layer should be minimized such that the VDD and GND planes create low inductance paths.
- One low-ESR 0.1uF decoupling capacitor should be mounted at each VDD pin or should supply bypassing for at most two VDD pins. Capacitors of smaller body size, i.e. 0402 package, is more preferable as the insertion loss is lower. The capacitor should be placed next to the VDD pin.
- One capacitor with capacitance in the range of 4.7uF to 10uF should be incorporated in the power supply decoupling design as well. It can be either tantalum or an ultra-low ESR ceramic.
- A ferrite bead for isolating the power supply for Pericom high-speed device from the power supplies for other parts on the printed circuit board should be implemented.
- Several thermal ground vias must be required on the thermal pad. 25-mil or less pad size and 14-mil or less finished hole are recommended.

Figure 6-14 Decoupling Capacitor Placement Diagram

6.5.2 High-speed signal Routing

Well-designed layout is essential to prevent signal reflection:

- For 90Ω differential impedance, width-spacing-width micro-strip of 6-7-6 mils is recommended; for 100Ω differential impedance, width-spacing-width micro-strip of 5-7-5 mils is recommended.
- Differential impedance tolerance is targeted at ±15%.

PI3HDX1204B1

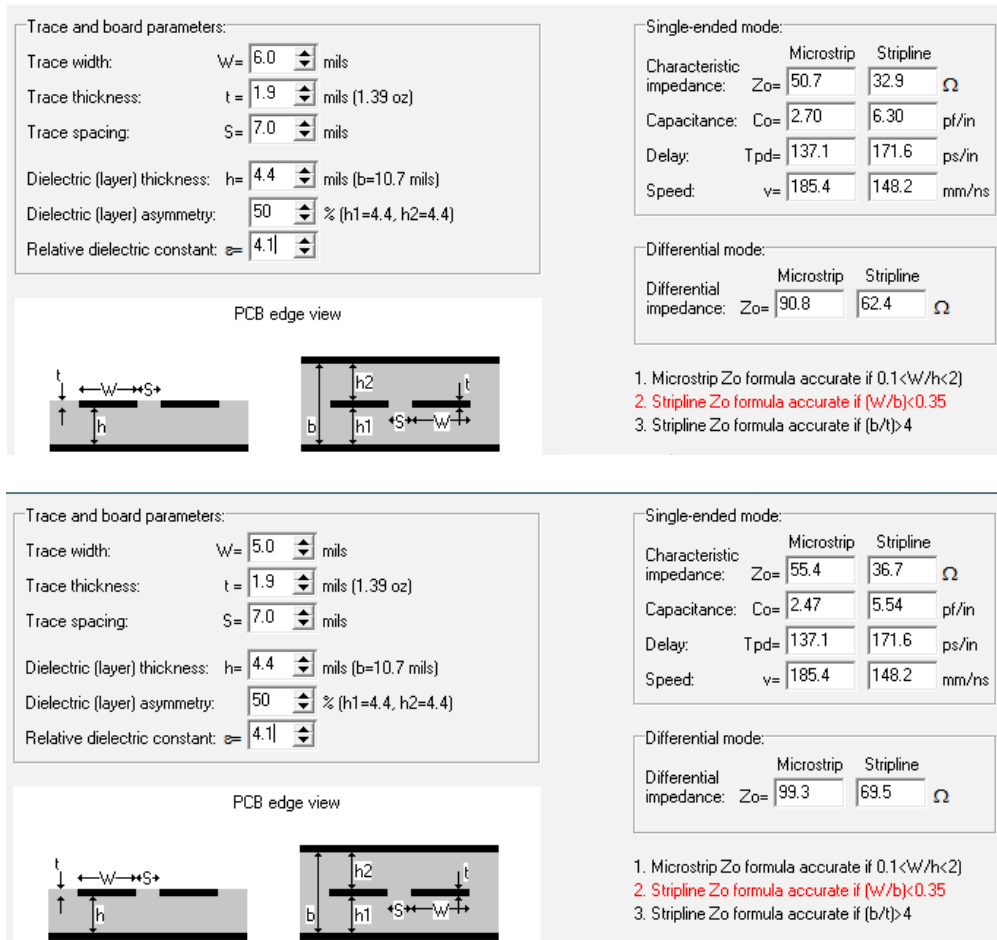

Figure 6-15 Trace Width and Clearance of Micro-strip and Strip-line

- For micro-strip, using 1/2oz Cu is fine. For strip-line in 6+ PCB layers, 1oz Cu is more preferable.

Figure 6-16 4-Layer PCB Stack-up Example

Figure 6-17 6-Layer PCB Stack-up Example

- Ground referencing is highly recommended. If unavoidable, stitching capacitors of 0.1uF should be placed when reference plane is changed.

Figure 6-18 Stitching Capacitor Placement

- To keep the reference unchanged, stitching vias must be used when changing layers.
- Differential pair should maintain symmetrical routing whenever possible. The intra-pair skew of micro-strip should be less than 5 mils.
- To keep the reference unchanged, stitching vias must be used when changing layers.
- Differential pair should maintain symmetrical routing whenever possible. The intra-pair skew of micro-strip should be less than 5 mils.

Figure 6-19 Layout Guidance of Matched Differential Pair

- For minimal crosstalk, inter-pair spacing between two differential micro-strip pairs should be at least 20 mils or 4 times the dielectric thickness of the PCB.
- Wider trace width of each differential pair is recommended in order to minimize the loss, especially for long routing. More consistent PCB impedance can be achieved by a PCB vendor if trace is wider.
- Differential signals should be routed away from noise sources and other switching signals on the printed circuit board.
- To minimize signal loss and jitter, tight bend is not recommended. All angles α should be at least 135 degrees. The inner air gap A should be at least 4 times the dielectric thickness of the PCB.

Figure 6-20 Layout Guidance of Bends

- Stub creation should be avoided when placing shunt components on a differential pair.

Figure 6-21 Layout Guidance of Shunt Component

- Placement of series components on a differential pair should be symmetrical.

Figure 6-22 Layout Guidance of Series Component

- Stitching vias or test points must be used sparingly and placed symmetrically on a differential pair.

Preferred

(Via placement is in same location & symmetric)

Avoid

(Via placement is not in same location/symmetric!)

Figure 6-23 Layout Guidance of Stitching Via

7. Mechanical/Packaging Information

7.1 Mechanical

Note:

(1) For latest package info, please check: <http://www.pericom.com/support/packaging/packaging-mechanicals-and-thermal-characteristics/>

7.2 Part Marking Information

Our standard product mark follows our standard part number ordering information, except for those products with a speed letter code. The speed letter code mark is placed after the package code letter, rather than after the device number as it is ordered. After electrical test screening and speed binning has been completed, we then perform an “add mark” operation which places the speed code letter at the end of the complete part number.

Figure 7-1 Part marketing information

7.3 Tape & Reel Materials and Design

Carrier Tape

The Pocketed Carrier Tape is made of Conductive Polystyrene plus Carbon material (or equivalent). The surface resistivity is 10⁶Ohm/sq. maximum. Pocket tapes are designed so that the component remains in position for automatic handling after cover tape is removed. Each pocket has a hole in the center for automated sensing if the pocket is occupied or not, thus facilitating device removal. Sprocket holes along the edge of the center tape enable direct feeding into automated board assembly equipment. See Figures 3 and 4 for carrier tape dimensions.

Cover Tape

Cover tape is made of Anti-static Transparent Polyester film. The surface resistivity is 10⁷Ohm/Sq. Minimum to 10¹¹Ohm sq. maximum. The cover tape is heat-sealed to the edges of the carrier tape to encase the devices in the pockets. The force to peel back the cover tape from the carrier tape shall be a MEAN value of 20 to 80gm (2N to 0.8N).

Reel

The device loading orientation is in compliance with EIA-481, current version (Figure 2). The loaded carrier tape is wound onto either a 13-inch reel, (Figure 4) or 7-inch reel. The reel is made of Antistatic High-Impact Polystyrene. The surface resistivity 10⁷Ohm/sq. minimum to 10¹¹Ohm/sq. max.

| 16mm | | 12.1 | 14.25 | 7.5 \pm 0.1 | | 8.0 | 16.3 | |
| 24mm | | 20.1 | 22.25 | 11.5 \pm 0.1 | | 12.0 | 24.3 | |
| 32mm | | 23.0 | N/A | 14.2 \pm 0.1 | 28.4 \pm 0.1 | 32.3 | | |
| 44mm | | 35.0 | N/A | 20.2 \pm 0.15 | 40.4 \pm 0.1 | 16.0 | 44.3 | |

NOTES:

- (1) A0, B0, and K0 are determined by component size. The cavity must restrict lateral movement of component to 0.5mm maximum for 8mm and 12mm wide tape and to 1.0mm maximum for 16,24,32, and 44mm wide carrier. The maximum component rotation within the cavity must be limited to 20o maximum for 8 and 12 mm carrier tapes and 10o maximum for 16 through 44mm.
- (2) Tape and components will pass around reel with radius "R" without damage.
- (3) S1 does not apply to carrier width \geq 32mm because carrier has sprocket holes on both sides of carrier where $D_0 \geq S1$.
- (4) So does not exist for carrier \leq 32mm because carrier does not have sprocket hole on both side of carrier.

PI3HDX1204B1

Reel dimensions by tape size

| Tape Size | A | N (Min) ⁽¹⁾ | W1 | W2(Max) | W3 | B (Min) | C | D (Min) |
|-----------|------------------------------|---------------------------|-------------------|---------|--|---------|-------------------------|---------|
| 8mm | 178±2.0mm or 330±2.0mm | 60 ±2.0mm or 100±2.0mm | 8.4 +1.5/-0.0 mm | 14.4 mm | Shall Accom- modate Tape Width Without Interference | 1.5mm | 13.0 +0.5/-0.2 mm | 20.2mm |
| 12mm | | | 12.4 +2.0/-0.0 mm | 18.4 mm | | | | |

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or
2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the

failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
