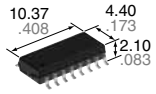
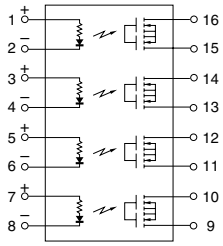
Space-saving 4-channel type with built-in input resistor

PhotoMOS®
RF SOP 4 Form A C×R10
Voltage-sensitive (AQS221F○2S)



mm inch

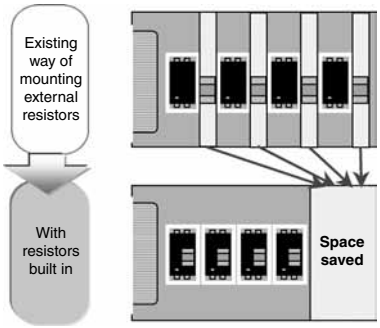


RoHS compliant

FEATURES

1. Built-in input resistor means less man-hours when mounting
The voltage-sensitive type, which eliminates the need to mount an external input resistor, is now available in a small package. Man-hours spent mounting external input resistors are cut and board designing is simplified.

2. Saves space on PC board
Since the small package size remains the same while including a built-in input resistor, space on the PC board is saved. This makes it easier to incorporate space savings when designing miniature devices.



<Artistic impression of PC board space savings due to built-in resistor>
In case of SSOP.

3. Both low on-resistance (R type) and low capacitance (C type) available at excellent electrical characteristics of C×R10
- R type: On resistance 0.8Ω (typ.)
  Output capacitance 14pF (typ.)
- C type: On resistance 9.5Ω (typ.)
  Output capacitance 1.1pF (typ.)

TYPICAL APPLICATIONS
