

**PECL/CMOS TO CMOS CLOCK DRIVER**

**ICS558-01**

**Description**

The ICS558-01 accepts a high speed input of either PECL or CMOS, integrates a divider of 1, 2, 3, or 4, and provides four CMOS low skew outputs. The chip also has output enables so that one, three, or all four outputs can be tri-stated.

The ICS558-01 is a member of the IDT Clock Blocks™ family of clock generation, synchronization, and distribution devices.

## External Components

The ICS558-01 requires two 0.01  $\mu\text{F}$  capacitors between VDDP and GND, and VDDC and GND—one on each side of the chip. These must be close to the chip to minimize lead inductance. Series termination resistors of 33 $\Omega$  can be used on the outputs (these also must be close to the chip).

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS558-01. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.
