

1. Features

- Universal programming utility
- Fast development
- Fast plug-in for software applications
- Atmega128 Core
- Firmware updatable via RS232 and USB
- FPGA updatable via RS232 and USB
- 3 High Current Programmable Supplies
- 1 High Speed Fast Programmable Supply
- 16 bit Level Settings
- 16 bit differential Measurements
- 4 analog comparators
- Vector Generator
- I2c to Daughter Board
- Mountable in 19" Rack

2. Application Examples

- Experimental tool for Lab and Prototyping
- Production Equipment for Serial Programming
- Programming tool for characterization

3. Ordering information

| Product Code | Description |
|---------------------------------------|--|
| PTC04 | Programmer Unit (Full Set: Including adapter, cables, software) |
| PTC04-DB-HALL01 | Daughter Board 1st generation Linear Hall sensors products |
| PTC04-DB-HALL03 | Daughter Board 2nd generation Linear Hall and current Sensors |
| PTC04-DB-HALL04 | Daughter Board PSI5 interface products |
| PTC04-DB-HALL05 | Daughter Board Current sensor products |
| PTC04-DB-90316 | Daughter Board Triaxis sensor products |
| PTC04-DB-HALL06 | Daughter Board 3 rd generation Triaxis and Linear sensor products |
| PTC04-DB-PRESSURE01 | Daughter Board Pressure sensors products |
| PTC04-DB-SPI | Daughter Board SPI interface products |
| PTC04-DB-FastLoader | Daughter Board LIN interface products |
| PTC04-DB-922xx | Daughter Board Latch and Switch products |
| PTC04-DB-xxxxx | Other Daughter Boards for future products |
| PTC04-19-x (with x equal to 1 till 4) | 19"Rack with build in x number of PTC04 |

4. Accessories

| Product Code | Description |
|--|---|
| PTC04-TestBench-Magnetic | Magnetic utility for evaluating samples on PTC04 |
| PTC-TestBench-4SIP-0x | PCB with 4SIP socket |
| PTC-TestBench-tssop-so8-0x | PCB with SO Socket and TSSOP Socket |
| Magnet-T01 | Magnet for testing Vertical packaged devices (4SIP-VA, VB and VC) |
| Magnet-T02 | Magnet for testing Horizontal packaged devices with a perpendicular field (SO, TSSOP...) |
| Magnet-T03 | Magnet for testing Horizontal packaged devices with a rotating field (SO, TSSOP...) |
| Magnet-T04 | Magnetic coil for testing Horizontal packaged devices with a perpendicular field (SO, TSSOP...) |
| Software Environment MPT (Windows) | Including Calibration Software and update tools |
| DLL for Mini-Tester (Windows) | |
| DLL's for all supported products (Windows) | |
| User Interface for most support products (Windows) | |

5. Functional Diagram

Figure 5-1 PTC04 Functional Block Diagram

6. General Description

The PTC-04 programmer was designed for efficient, precise calibration of the Melexis families of programmable ICs. The programmer is designed to be easily adapted to a standard PC and to an application module to allow calibration of programmable sensor ICs within the operating environment. The PTC-04 programmer contains its own programmable power supply and measurement circuitry. The programmer is similar to a standard EEPROM programmer, but adds many special features such as 16 bit voltage and current measurement capability, and configuration options that will accommodate users from the prototyping phase directly into production. An IBM compatible PC is required (not included) to load software to the programmer and control the functions of the programmer.

Communication is done through a standard RS-232 null modem cable to a COM port of the PC or via USB. The PC requires no custom configuration, allowing the programmer to be used with any PC with a COM port speed of 115.2kbs or a standard USB 1.1 or USB 2.0 interface

8. Glossary of Terms

| | |
|-------|--|
| PTC04 | The programmer (including the applicable DB) |
| DB | Daughter board |
| PTC | Program Through Connector |
| PPS | Programmable Power Supply |
| MPT | Melexis Programmable Toolbox |
| PSF | Product specific function library (DLL) |
| DLL | Dynamic-link library |

9. Absolute Maximum Ratings

| Parameter | | Value | Units |
|---------------------------------------|--------------|----------|-------|
| Supply Voltage (External input) | $V_{S\ EXT}$ | 48.2 | V |
| Reverse Voltage Protection | | Yes | |
| Supply Current | $I_S\ Fused$ | 1 | A |
| PPS 1,2,3 Output voltage | V_{PPS} | 34 | V |
| PPS 1,2,3 Output Current (peak value) | I_{PPS} | 500 | mA |
| PPS 4 Output Current (peak value) | I_{PPS} | 50 | mA |
| Operating Temperature Range | T_A | 35 | °C |
| Storage Temperature Range | T_S | 0°C – 55 | °C |

Table 1: Absolute maximum ratings

Exceeding the absolute maximum ratings may cause permanent damage. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

10. PTC04 Electrical Specifications

10.1. System Power Supply

DC Operating Parameters $T_A = 25-35^\circ\text{C}$, $V_{ext} = 48\text{V}$ (unless otherwise specified)

| Parameter | Symbol | Test Conditions | Min | Typ | Max | Units |
|--------------------------------------|---------------|-----------------|-----|----------|------|---------|
| DC System Power Supply | V_{ext_in} | | 23 | 48 | 48.2 | V |
| System Current Consumption | I_{Ext_in} | | 0.1 | | 1.2 | A |
| Daughter Board Analog Power Supply * | | | | 500 | 36 | V mA |
| Daughter Board Digital Power Supply | | | | 5 500 | | V mA |

Table 2: General electrical parameters

*Depends on DC System Power Supply

10.2. Programmable High Current Power Supply 1-3

DC Operating Parameters $T_A = 25-35^{\circ}\text{C}$, $V_{\text{ext}} = 48\text{V}$ (unless otherwise specified)

| Parameter | Symbol | Test Conditions | Min | Typ | Max | Units |
|-----------------------------------|--------------|------------------------|-------|------|-------|-------|
| Output voltage range * | VPPS 1-3 | Unloaded | 0.62 | | 34.00 | V |
| Output resolution | | | | 0.52 | | mV |
| Output Current (peak value) | IPPS 1-3 | | -500 | | 500 | mA |
| Current Limit range | I limPPS 1-3 | | -500 | | 500 | mA |
| Settling time | | Unloaded | 10 | | 20 | uS |
| Voltage Source Swing PPS1-PPS3 | Vout | I out = 10mA | 0.035 | | 34 | V |
| | | I out = 100mA | 0.2 | | 32.5 | V |
| | | I out = 500mA | 1.15 | | 26 | V |
| | | I out = -10mA | 1.14 | | 34 | V |
| | | I out = -100mA | 2.3 | | 30 | V |
| | | I out = -500mA | 9.46 | | 30 | V |

| | | Using vector functions | | 10 | | uS |
| Voltage Source Noise | | PPS1-4, Peak-to-peak | | 2 | 5 | mV |
| Current Measurement Sample Time | | Firmware Only | | 0.5 | | mS |
| | | PC software and RS232 | | 20 | | |

Table 6: Function Timings

13. Unique Features

13.1. Mini-Tester

Due to the architecture of the Hardware in combination with the Software, the PTC04 can be used as a mixed mode tester (With limited performance).

There are library routines (DLL) available in order to interface with any software language. (C++, Visual Basic, Lab view, Excel (VBA)...))

13.2. Analogue Vector Generator

A vector space of 512Kbyte allows you to store a huge amount of actions. These actions consist of setting a level on a channel, waiting a time x, setting the Fast DAC and making samples on an analogue input (measurement) or a digital comparator. For details, refer to the PSF of the PTC04 chapter Pattern functions.

13.3. Acquisition memory

An advance library on the Analogue vector generators, allows use of the vector area in combination with Measurement and setting levels. Through this method one may use the PTC04 as a slow Data acquisition card.

13.4. Port E Atmega128

The port E of the Atmega128 core is connected fully to the Daughter board.

With this port, items like critical timing generation measurements can be performed. Also, all types of UARTS can be configured. Other capabilities are possible with the PTC04.

For more details, refer to the Atmega128 datasheet.

14. Main Board Description

14.1. Board Layout

Figure 14-1

As shown in Figure14-1, The Main board can be divided in 4 major areas.

- The Supplies where all required voltage and current levels are created
- The digital Core that processes all requests from the host computer
- A Driver Area where the Programmable Power supplies are located
- A Measurement area where the ADC and the input MUX are located

Beside these four areas, there are the input connector on the main board and the two connectors to the daughter board.

14.2. Power Supplies

The Power Supply input connector is a single input to supply the whole PTC. The Input supply requires a minimum of 24 volts and can tolerate a maximum of 48 volts. It is not recommended to use a higher voltage than needed for the application. There's an internal fuse (on the main board) of 1 A in order to avoid damage when improperly used. The connected supply should provide a minimum current of 1.5 A with peak capacity to source 10A.

The external Supply is the source to create all the internal requirements. Internal voltages are created on the main board by using the input voltage from the external supply.

- +35V for drivers (for the drivers or Programmable Power Supplies)
- +5V Digital (Digital core as interface between PTC and Host application)
- +5V Analog (measurement circuit with MUX and ADC)
- +3.3 V Digital (Supply for the FPGA and USB)

14.3. Power Supply System Check

When something goes wrong it's useful to check the status of all the above mentioned supplies.

The main board has the capability to measure all internal supplies. The only requirement is that the +5V Digital supply is available. This is indicated by the red led on the rear panel of the programmer.

All the other supply could be checked by the Measurement system itself. Channels 8 till 11 are reserved for this. The channel 8 is connected to the driver supply and is very useful to check the voltages of the connected external supply. This can be useful to check when applications are launched where extra high voltage is needed. Refer to the chapter "Measurement system" for more details about measuring these channels. There are DLL functions available that will do these checks for you.

A typical diagnostic check will start with checking if the external supply is available. Then it will check if the red led is lit. If these steps are ok, the diagnostics via software can be executed.

14.4. Supply Connector

This connector provides the PTC with power.

Any power source that generates a voltage between 24 and 48 V DC with a minimum current of 1.5 A is allowed.

Figure 14-2

There is an alternative connector on the main board (PWRCON1), parallel to the DC power supply socket.

Figure 14-3

14.5. LED Indicators

Two Led indicators will help the user to check the status of the PTC

The red led shows that the core inside has power

The green led will show a busy status. If the Programmer is executing a job, the led will be on.

Figure 14-4

14.6. USB Connector

One of the communication possibilities with the host PC is the USB link.

See chapter "USB communication with host" for more details

14.7. RS 232 Connector

One of the communication possibilities with the host PC is the serial Communication.

See chapter “RS communication with host” for more details

14.8. Reset button

This button is connected to all reset lines in the main board as well as on the daughterboard. This button allows the user to reset the whole programmer after crashing software and when connected also to the application device under test.

14.9. Daughter board Connectors

The main board has two connectors to the interface with the application. The PTC allows the addition of a full PCB in between the main board and the interface. This daughter board can be mounted on the two connectors. In some exceptional cases, a daughter board contains only a few wires from the Analog connector to the application connector.

The connectors are described below.

Figure 14-5: Daughter Board Connectors

14.9.1. Digital DB Connector (40 Pins)

Mainly, the digital connector is meant to expand the programmer for extra needs. Address lines A0-A7 together with the Map Select Lines F8-FF allows the user direct access to an area of 2 K. Example would be adding a simple addressed I/O register by using the selection lines. If more complexity is needed, a full FPGA can be mounted on the DB board.

| Pins | Names | Description |
|--------|--------------|---|
| 1 – 8 | A0 – A7 | Address lines |
| 9 – 16 | D0 – D7 | Data Lines active during Rd or Wr signals |
| 17 | Rd | Read : A negative pulse will indicate a sampling of the data on the Data Bus |
| 18 | Wr | Write : A Negative pulse will indicate when data is available on the Data Bus |
| 20 | Reset | This signal goes low by powering the PTC or by pressing the reset button. This line can be pulled low by application. Check firmware documentation for resetting by software. |
| 21-22 | SCL / SDA | I2c Bus |
| 23-30 | F8,F9,...,FF | CS lines when the address areas are accessed |
| 31-38 | Port E | Note: These pins are limited to 5 Volt input\output. The full Port E of the Atmega core is mounted to these pins. This allows us to use advanced features like PWM, UARTS, Time Measurements, etc. By using firmware that supports these functions, really nice application specific requirements can be fulfilled. |
| 39 | DGND | Digital Ground |
| 40 | +5V Digital | 5 Volt Digital Supply. Maximum current to get out of this supply :mA |

Table 7: Digital daughter board connector

Note: All the pins are limited to 5 Volt input\output. However, there are protections, please take precautions in order to avoid damage to the main board.

14.9.2. Analog DB Connector (48 Pins)

Mainly, the analog connector provides all the analog signals and measure possibilities.

| Pins | Names | Description |
|-------------|---------------|---|
| 28,32,36 | PPS 1-3 | Output of the Programmable Supplies |
| 40 | PPS 4 | Output of the Fast DAC Programmable Power Supply |
| 27,31,35,39 | Isense_PP1-4 | Outputs (Driver outputs before Rsens) for current evaluations. These outputs could be used to connect to the analog comparators in order to create fast digital signals based on current. |
| 2,4,6,8 | ExtMeas1-4Pos | There are 4 differential inputs for making measurements |
| 10,12,14,16 | ExtMeas1_4Neg | The negative inputs of ExtMeas1-4Pos |
| 17,19,21,23 | Shtd_PPS1-4 | Outputs that show the status of the Drivers. Signals are meant to connect LED's for the front panel |
| 43,44,47,48 | AnaComp0-3 | See *Note. Input (limited to 5V) Fast Level comparators in order to remove time consuming measurement |
| 18 | +35V_Supply | Supply to extend the daughter board with some extra drivers |
| 20 | NC | Not Connected |
| 24 | +2.5V Ref | Output of internal reference |
| All other | AGND | Analog Ground |

Table 8: Analog daughter board connector

Note: All the pins are limited to 35 Volt input/output! However, there are protections, please take precautions in order to avoid damage of the main board.

** Note: Some pins are protected and limited to 5 Volt! However, there are protections, please take precautions in order to avoid damage of the main board.*

15. Daughter board concept

15.1. Background

The future of our products is not known and building a universal programmer will not be possible to survive more than a few years. For this reason, a flexibility is built in by having a Daughter board (abbreviation: DB) as interface between PTC04 and the application connector. On this way, special needs can be fulfilled. The simplest DB is just wires form the DB connectors to the application connector. The idea is to support with one single DB as many as possible products.

15.2. Requirements

See specific daughter board documentation.

16. RS 232 Communication with host

This page describes all items concerning the hardware of the RS232C communication link.

Information about the protocol is explained in the software documentation.

16.1. Connector

| DB9-Male | Description |
|----------|-------------|
| 2 | RxD |
| 3 | TxD |
| 5 | GND |

Table 9: RS232 connection

9 PIN D-SUB MALE at the Computer.

16.2. Cable

The cable between PTC and Host PC is a standard null-modem cable for RS232C Cable Description:

| DB9-FEM | DB9 FEM | Description |
|---------|---------|-------------|
| 2 | 3 | RxD / TxD |
| 3 | 2 | TxD / RxD |
| 5 | 5 | GND |

Table 10: RS232 cable

16.3. Settings

The microprocessor core has a fixed setting to communicate with the host.

Used settings are as follows:

| Parameter | Value |
|--------------|-------------|
| Baud rate | 115, 2 kBps |
| Bits | 8 |
| Parity | No |
| Flow Control | None |
| Stop bits | 1 |

Table 11: RS232 settings

17. USB Communication with host

Universal Serial Bus (USB) is used (V1.0)

Developed by Compaq, Hewlett-Packard, Intel, Lucent, Microsoft, NEC and Phillips.

17.1. Connectors

| Pin | Name | Description |
|-----|------|-------------|
| 1 | VBUS | +5 VDC |
| 2 | D- | Data - |
| 3 | D+ | Data+ |
| 4 | GND | Ground |

Table 12: USB connection

17.2. Cable

Default:

USB A (at the Connector) to plug into a PC

USB B (at the Connector) to plug into the PTC04

Series "A" plugs are used towards the host system and series "B" plugs are used towards the USB device.

17.3. Settings

Two drivers have to be installed and are available in one executable on the Software CD.

18. Measurement system

The measurement system on the main board contains mainly a high accurate 16 bit ADC and two 16 to 1 channels MUX. Basically, the ADC always measures differential between inputs.

For the internal voltage channels, the negative input is the internal analog ground.

For the current measurements that use a sense resistor (PPS1-4) are clearly measuring over the sense resistor.

There are also 4 full differential lines going to the daughter board allowing the user to make high quality measurements by selecting the reference by the application itself. This way of working easily supports the use of force and sense lines.

18.1. Channels

| Nr. | Pos Input | Neg Input | Description |
|-----|-----------------------|--------------------|-------------------------------|
| 0 | Vout PPS1 | Internal AGND | Output Voltage PPS1 |
| 1 | V driver PPS1 | Vout PPS1 | Output Current PPS1 |
| 2 | Vout PPS2 | Internal AGND | Output Voltage PPS2 |
| 3 | V driver PPS2 | Vout PPS2 | Output Current PPS2 |
| 4 | Vout PPS3 | Internal AGND | Output Voltage PPS3 |
| 5 | V driver PPS3 | Vout PPS3 | Output Current PPS3 |
| 6 | Vout PPS4 | Internal AGND | Output Voltage PPS4 |
| 7 | V driver PPS4 | Vout PPS4 | Output Current PPS4 |
| 8 | Supply Driver: +35/2 | Internal AGND | Driver Supply divide by 2 |
| 9 | Supply Analog : +5 V | Internal AGND | Analog 5V Supply |
| 10 | Supply Digital : +5 V | Internal AGND | Digital 5V Supply |
| 11 | Reference : +2.5V | Internal AGND | Reference Voltage for DAC\ADC |
| 12 | DB_Ana_conn Pin 2 | DB_Ana_conn Pin 10 | Daughterboard Meas. Channel 1 |
| 13 | DB_Ana_conn Pin 4 | DB_Ana_conn Pin 12 | Daughterboard Meas. Channel 2 |
| 14 | DB_Ana_conn Pin 6 | DB_Ana_conn Pin 14 | Daughterboard Meas. Channel 3 |
| 15 | DB_Ana_conn Pin 8 | DB_Ana_conn Pin 16 | Daughterboard Meas. Channel 4 |

Table 13: ADC measurement channels

18.2. Conversion time

In general the conversion time depends on the loaded firmware version. Theoretically, a full conversion to a floating real value takes about 4ms if the filter is put at 100 samples.

18.3. Accuracy

To preserve the accuracy of the PTC04, Melexis recommends checking the tolerance of the PTC04 once a year.

19. Application Information

When using the PTC04 in combination with external equipment or other PTC04's, it is very important to have a good solid ground connection between the different appliances. A bad ground connection between appliances and the PTC04 can cause damage to the PTC04. The measuring unit and the digital channels of the PTC04 are sensitive to level shifts.

When using the PTC04 for End Of Line calibration of a Melexis product, it is mandatory to use qualified reference equipment for the End Of Line verification of the programmed/calibrated product.

20. FAQ

Please refer to the document FAQ_PTC04.pdf

21. Mechanical Outlines

Figure 21-1: Mechanical Outlines

22. ESD Precautions

Electronic semiconductor products are sensitive to Electro Static Discharge (ESD).

Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

No obligation or liability shall arise or flow out of Melexis' rendering of technical or other services.

The Information is provided "as is" and Melexis reserves the right to change the Information at any time and without notice. Therefore, before placing orders and/or prior to designing the Product into a system, users or any third party should obtain the latest version of the relevant information to verify that the information being relied upon is current. Users or any third party must further determine the suitability of the Product for its application, including the level of reliability required and determine whether it is fit for a particular purpose.

The Information is proprietary and/or confidential information of Melexis and the use thereof or anything described by the Information does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other intellectual property rights.

This document as well as the Product(s) may be subject to export control regulations. Please be aware that export might require a prior authorization from competent authorities.

The Product(s) are intended for use in normal commercial applications. Unless otherwise agreed upon in writing, the Product(s) are not designed, authorized or warranted to be suitable in applications requiring extended temperature range and/or unusual environmental requirements. High reliability applications, such as medical life-support or life-sustaining equipment are specifically not recommended by Melexis.

The Product(s) may not be used for the following applications subject to export control regulations: the development, production, processing, operation, maintenance, storage, recognition or proliferation of 1) chemical, biological or nuclear weapons, or for the development, production, maintenance or storage of missiles for such weapons; 2) civil firearms, including spare parts or ammunition for such arms; 3) defense related products, or other material for military use or for law enforcement; 4) any applications that, alone or in combination with other goods, substances or organisms could cause serious harm to persons or goods and that can be used as a means of violence in an armed conflict or any similar violent situation.

The Products sold by Melexis are subject to the terms and conditions as specified in the Terms of Sale, which can be found at <https://www.melexis.com/en/legal/terms-and-conditions>.

This document supersedes and replaces all prior information regarding the Product(s) and/or previous versions of this document.

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
