PIN Diodes for Microwave Switch Designs

Rev. V2

Introduction

This Application Note is intended to provide practical guidance in the selection of PIN Diodes for switch control circuit functions. Switches, Digital and Analog Attenuators, and Limiters each have unique functions that require proper device selection. The design difficulty lies within the parametric translation from <u>Diode Specifications</u>, to the circuit designers' <u>Microwave Specifications</u>. Diode parametric language such as Vb, Vf, Ct, Rs, τ_L , θ , must convert into Insertion Loss, VSWR, Isolation, P1dB, Input IP3, RF Operating Power, RF Power Dissipation, and

D.C. Power Consumption Specification Terminology.

In addition to actual diode parameters, package parasitics play a significant role in determining switch circuit performance. Package capacitance, package inductance, package electrical resistance, and package thermal impedance are extremely important considerations to determine the effective frequency bandwidth and maximum incident power for reliable switch operation.

The manufacturing methodology dictates the type of diode selection. Surface mount assembly will mandate the usage of either plastic, HMIC SURMOUNT, or MELF & HiPAX ceramic devices. Chip and Wire (Hybrid) manufacturing will determine the usage of Cermachips, Flip Chips, or Beam Lead Devices. Schematics for the most common switch designs: Series-Exclusive, Shunt-Exclusive, and Series-Shunt are outlined below for consideration.

The Decision Making Process for PIN Diode Selection for Microwave Switch Design

The following procedure outlines and Effective Process for PIN Diode Selection for Switch Design.

- 1. Determine the Preferred Type of Manufacturing for the PIN Diode in the Switch Design: Surface Mount or Chip and Wire (Hybrid) Manufacturing.
- 2. Determine the Frequency of Operation and RF Power Handling of the Switch Design.
- 3. Use Table 1, "<u>Relative Switch Performance and Design Evaluation Matrix</u>" to determine the <u>Type of</u> <u>Switch Design</u> that Best Satisfies the Particular Switch Specifications and Requirements.
- 4. Use Table 2, "<u>Relative PIN Diode Performance Evaluation Matrix</u>" to Determine the <u>Type of PIN Di-ode</u> that Best Satisfies the Switch Design Selected from Table 1.
- 5. Use Table 3, "<u>PIN Diode P/N Series Matrix</u>" to Determine the <u>PIN Diode P/N Series</u> that Best Satisfies the Type of PIN Diode Selected from Table 2.

PIN Diodes for Microwave Switch Designs

Table 1: Relative Switch Performance and Design Evaluation Matrix

	Switch Design Configuration			
Parameter	Series Diodes Exclusive	Shunt Diodes Exclusive	Series-Shunt Diodes	
Insertion Loss	Worst	Moderate	Best	
VSWR	Moderate	Worst	Best	
Isolation	Worst	Moderate	Best	
P1dB	Moderate	Moderate	Moderate	
Input IP3	Moderate	Moderate	Moderate	
RF Incident Power	Worst	Best	Moderate	
RF Power Dissipation	Worst	Best	Moderate	
Switching Speed	Worst	Best	Moderate	
D.C. Power Consumption	Best (Single +5 V)	Moderate (+5 V, -5 V)	Worst (+5 V, -5 V)	
PIN Diode Driver Design Simplicity	Best (+5 V Only)	Moderate (+5 V, -5 V)	Moderate (+5 V, -5 V)	
RF Design Simplicity	Best	Worst	Moderate	
Cost	Best	Moderate	Moderate	
Overall Evaluation	34 Points	38 Points	40 Points	

Notes:

- 1. Evaluation based upon following grading : Best = 5 Points, Moderate = 3 Points, Worst = 1 Point. The higher the score, the better the overall relative design advantage.
- 2. Where there is No significant relative advantage, a "Moderate " weighting can be used.
- Assumptions for SP2T Design:

Commitment to produce in volume is not guaranteed.

- 1. Design is a Reflective SP2T.
- 2. (2) Diodes are used per RF port.
- 3. Frequency Bandwidth is 3.0 : 1 maximum.

Conclusions:

The Series-Shunt Design is the Best in terms of Overall Switch Performance and value. Since each Design has a specific advantage, the decision for a Switch Design Selection is determined by the Specific Design Priorities for the requirement.

	Surface Mount Assembly		Chip & Wire Hybrid Assembly		sembly	
Key Parameter	Plastic	MELF or Hi- Pax	SURMOUNT	Cerma Chip	Flip Chip	Beam Lead
1 MHz < F < 1 GHz		Best Selection				
100 MHz < F < 4 GHz	Best Selection					
4 GHz < F < 20 GHz			Best Selection			
20 GHz < F < 60 GHz					Best Selection	Best Selection
100 MHz < F < 20 GHz				Best Selection		
Pinc < 0.1 W						Best Selection
0.1 W < Pinc < 1 W	Best Selection				Best Selection	
1 W < Pinc < 20 W			Best Selection			
20 W < Pinc < 200 W		Best Selection		Best Selection		
Relative Cost Index	Lowest	Moderate/Highest	Moderate/Highest	Lowest	Moderate	Highest

Table 2: Relative PIN Diode Performance Evaluation Matrix

Conclusions:

- 1. **Plastic Devices** are best suited where <u>Cost</u> is a decision driver, the Operating Frequency < 4 GHz, and the RF C.W. Incident Power < 1 W (+ 30 dBm).
- 2. **MELF or HIPAX Ceramic Devices** are best utilized where <u>Highest Average Power</u> (> 20 W C.W.) is the Primary Design Goal and the Operating Frequency < 1 GHz.
- SURMOUNT Devices are probably the <u>Best Overall Compromise</u> in Device Selection. They can Operate (In Various bands) from 10 MHz – 20 GHz and Perform well with RF Incident Power < 20 W C.W (+ 43 dBm).
- 4. **Cermachip Devices** provide the <u>Best Overall Performance</u> for Operating Frequeny (100 MHz 20 GHz), and RF Incident Power < 200 W C.W (+ 53 dBm).
- 5. Flip Chip Devices are best suited for <u>mmwave Frequencies</u> < 60 GHz, where the RF Incident C.W. < 1W (+ 30 dBm) and Conductive Epoxy or Soldering is Required.
- 6. **Beam Lead Devices** are best suited for <u>mmwave Frequencies</u> < 60 GHz, where the RF Incident C.W. < 0.1W (+ 20 dBm) and Thermo Compression Bonding is Required.

Общество с ограниченной ответственностью «МосЧип» ИНН 7719860671 / КПП 771901001 Адрес: 105318, г.Москва, ул.Щербаковская д.З, офис 1107

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

http://moschip.ru/get-element

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:
