

RoHS compliant

FEATURES

- Now even more miniature.**
The new thin type cuts 35% from the thickness of the previous short type. Device installing is now easier than ever.
- Certain detection unaffected by the reflectance of the object**
The sensor can provide stable detection that is not affected by the condition (color or material of the clothing) or parts (skin, hair, etc.) of the object being monitored. (Reflectance 18% to 90%). Excellent performance even when the detection surface is dirty.
- Only connecting DC power supply for operating**
Built-in oscillation circuit type obviates the hitherto existing need for start signal input.
- Use in adjacent positions is possible**
These sensors can be located in adjacent positions, because the timing of the external trigger signals can be adjusted so that the beam frequency of each adjacent sensor will not interfere with the other.

APPLICATIONS

- Water-based product market**
 - Automatic lighting of wash basin units
 - Toilets
 - Automatic water flow from faucets
- Stores and financial instructions**
 - Automatic doors
 - Automatic lighting
 - Cash dispensing machines
 - Automatic teller machines
 - Visitor detecting sensors
- Amusement market**
 - Automatic lighting for game display
- Medical field**
 - Non-contact switch

Standard reflection board: 500 mm 19.685 inch square area, 90% reflection rate.

Notes: 1. Detecting an object within the maximum preset detection distance.

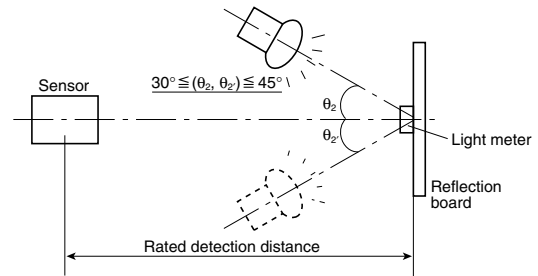

$$2. \text{Distance deviation} = \frac{a-b}{a} \times 100 (\%)$$

(a: detection distance of detection target with reflectance of 90%.
b: detection distance of standard detection target with reflectance of 18%.)

| Output characteristics | Remain voltage | Maximum | 1 V DC | 1.2 V DC | 1 V | | I = 10 mA |
| | Leakage current | Maximum | 5μA | | 3μA | | V = 30 mA |

Notes: 1. The thin short type is only available for 5V DC.
2. The ratio between the 4 operating modes (*a to *d) depends on the external trigger period and detector time, and the current consumption corresponds with this varying ratio.

4. The output transistor is open collector. The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

Detection status:
output transistor ON
Non-detection status:
output transistor OFF

(NPN output types of the AMA series and all of AMBA series)

Detection status:
output transistor ON
Non-detection status:
output transistor OFF

(PNP output types of the AMA series)

TIMING CHART

1. Built-in oscillation circuit type

Notes: 1. Circuit stability time : Max. 12 ms
2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

2. External triggering type

Note: The sensor recognizes at the $V_{TH} \rightarrow V_{TL}$ edge of an external trigger that the external trigger has been input.

- Notes: 1. Circuit stability time: Max. 12 ms
 2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

HOW TO USE

1. Wiring diagram of connector

- Notes: 1. The output transistor has an open collector structure.
- Detection status: Output transistor ON (connected to GND)
 - Non-detection status: Output transistor OFF (open state)
2. The status of the external trigger input is as follows:
- Open at the high level
 - GND (less than 0.8V) at the low level
- Under no circumstances must a high-level voltage be applied.
3. To maintain the power supply superimposed noise performance, be certain to connect a capacitor (33µF or more) to the sensor power supply input terminal in order to stabilize the power supply voltage.

Operating region characteristics

- How to interpret the graph

Example: Operating area of the Short Type with rated detection distance of 8 cm 3.150 inch.

Operating area within the dotted lines

Objects that enter the entire area are detected.

Note: If only part of the object is in the detection area, it is not detected.

Operating area within the solid lines

Objects that even partially enter the area are detected.

NOTES

1. Environment

- 1) Avoid using the sensor in environments containing excessive amounts of steam, dust, corrosive gas, or where organic solvents are present.
- 2) When the sensor is used in noisy environments, implement a countermeasure such as connecting a capacitor (Min. 33 μ F) across the power input terminals. Only use the sensor after verifying actual operation.

2. Wiring

- 1) Check all wiring before applying power. Incorrect wiring may damage the internal circuit (in particular, check that the connection to the power supply is not reversed.)
- 2) Avoid excessive removing and replacing of the connector.

3. Detector surface (Optical surface)

- 1) Keep the detector surface clean. Excessive dust or dirt on the detector surface will deteriorate the sensing performance.
- 2) Do not allow condensation or freezing to occur on the surface of the sensor. If condensation or freezing does occur at low temperatures, the sensor may not detect objects correctly.
- 3) This product is designed to detect the existence of human bodies. The sensor may not detect properly or the detection distance may become unstable if the objects consist of a low reflective material (e.g., an object coated with black rubber, etc.) or of a highly reflective material (e.g., mirror, glass, coated paper, etc.).

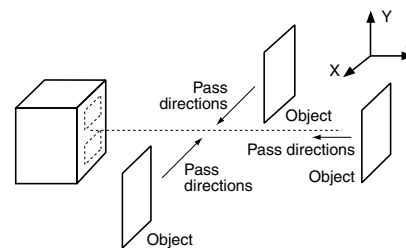

- 4) The front surface of the lens and case are made of polycarbonate resin and can withstand water, alcohol, oils, salts and weak acids. Other fluids such as alkalines, aromatic hydrocarbons and halogenated hydrocarbons may melt or swell the lens and case, please do not have such fluids touch the lens and case.
- 5) If you use the sensor with a cover or filter connected to the front of the sensor, the sensor may detect the cover itself, the detection distance can change, and unstable operation can result.
- 6) If this sensor is used in a position where it will be facing another sensor, light will be received from the other sensor which can cause mutual interference and malfunction. Therefore, please verify the installation conditions before use.

- 7) When multiple sensors are to be used side by side, please verify that there will be no mutual interference by installing them with the proper spacing, depending on the type as shown below.

| Model number | Sensor spacing |
|--------------|------------------|
| AMBA1 series | 5 cm 1.969 inch |
| AMA1 series | 8 cm 3.150 inch |
| AMBA2 series | 10 cm 3.937 inch |
| AMBA3 series | 20 cm 7.874 inch |

4. Recommended installation procedure

Install the sensor so that it is orientated correctly in relation to the pass directions of the target objects as shown in the figure below.

* → stands for pass direction of the target object.

For the general precautions, refer to "NOTES FOR USING MOTION SENSOR (Common)" on next page.

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009
