INTRODUCTION

Automotive Electronic Designers need suppliers who understand their business. With a comprehensive approach to quality, safety and reliability, Fairchild distinguishes itself by providing AEC qualified solutions that solve complex challenges in the automotive market.

Product Design

Fairchild has a legacy of more than 50 years as a worldwide automotive semiconductor supplier. Our portfolio of products covers the full spectrum of the automotive power space. Fairchild's Smart Power products combine power discrete and control IC technologies with innovative packaging to create modular-level solutions for DC and AC motor drive, load control, solenoid operation, lighting, power distribution, injection and ignition. Our leading-edge IGBTs, MOSFETs, injector drivers, gate drivers and modules are used in production power train, engine management, electric power-assist steering (EPAS), motor drives, power inverters and other systems that require high quality components. We partner with automotive customers to optimize performance, reduce component count, improve time-to-market, and enhance the overall value proposition. From concept through production, Fairchild partners with you to develop solutions that meet the needs of advanced vehicles, with modeling and simulation for both thermal and electrical performance.

Fairchild also offers a variety of automotive products in un-sawn wafer, sawn wafer and KGD (Known Good Die). Fairchild's Known Good Die program supports maximum yield in the application, using SPC to assure tight parameter distribution. After singulation, all die are 100% electrically tested to the datasheet. Tests include high current testing.

Quality

Our best-in-class products are complemented by a focused Automotive Product Line, with dedicated resources, including global power labs and regional applications support. Our automotive product development and manufacturing sites are QS-9000 and TS-16939 certified. Automotive products are manufactured and assembled in-house in Fairchild operated facilities.

KEY APPLICATIONS.....	4-6
ELECTRICAL CENTER/LOAD CONTROL.....	4

SMART HIGH-SIDE SWITCHES.....	14
HIGH CURRENT BRIDGES	14
AUTOMOTIVE POWER MODULES.....	15

Power Distribution Center

The primary function of smart switches is to replace automotive relays and fuses, to protect vehicle wiring and to improve diagnostics of electrical loads. With smart switches, it is possible to combine switching and protection functions in a single device. Fairchild has several offerings for load control and power distribution, covering current ranges for exterior and interior lighting, powered actuators, motors and auxiliary power.

Power distribution systems are often located in multiple places within a vehicle, both interior and under the hood. The temperature ranges of Fairchild's products are compatible with under the hood environments, load dump and other electrical transients. They are fully qualified to AEC standards.

Design Advantages Include:

- Analog current monitoring of loads
- PWM capability for lighting
- Fault isolation and reporting

Power Inverter

Fairchild provides solutions for DC-DC conversion for all power ranges. From low power AC accessory inverters to multi-kilowatt HV/EV down converters for 12V_{DC} power.

Design Advantages Include:

- Low propagation delay of gate drivers efficient switching
- Planar technology high voltage MOSFET for output robustness
- Half-bridge gate drivers in output stage can provide high noise immunity and dead time control
- MillerDrive™ low-side gate drivers provide high peak current and low voltage drop

DC MOTOR CONTROL/BRUSHLESS MOTOR DRIVE

Fairchild products provide solutions for driving DC motors efficiently over a wide range load in full- and half-bridge configurations. For higher currents, half-bridge gate drivers like the FAN7080 and FAN7190 can be used with discrete MOSFETs and IGBTs to control motors operating from 12V to 600V_{DC}. For 12V_{DC} motors, operating in the ~30A range, the FAN7093 provides full- and half-bridge control, with current sensing and diagnostic feedback common in load sensing applications such as seat tracks, window lift, powered lift gate, cooling fan and reversing wipers.

Design Advantages Include:

- High efficiency over wide PWM range
- Solutions for all load ranges in ICE, HV and EV vehicle applications
- Up to 50kHz operation typically capable

Discrete HVIC Based Full-Bridge

Smart Power P/N Based Full-Bridge

Brushless Motor Drive

Three-phase motor control, both from low voltage and HV supply are used for driving variable speed powered systems.

Design Advantages Include:

- HVIC gate drivers combine to drive each half-bridge providing bootstrap gate drive
- Planar MOSFETs available for HV application robustness

Three-Phase Motor Control

EcoSPARK® 1 and EcoSPARK® 2 igniters provide 200 to 500mJ SCIS energy ratings. Standard product ranges from 300 to 500V clamp.

Customer specific devices, including Smart IGBT products with a co-packaged control IC can provide maximum dwell, current limit and other features.

Automotive Ignition

Coil-on-Plug (COP) System Architecture

Switch-on-Coil System Architecture

Typical IGBT Igniter Circuit

Automotive Injection

Piezo Activated Semi-Resonant Direct Injection

Common Rail Solenoid Direct Injection (CR-SDI)

Common Rail Piezo Direct Injection (CR-PDI)

N-CHANNEL MOSFETs

N-Channel MOSFETs (Trench)

High-Voltage (HVIC) Gate Drivers

Fairchild's High-Voltage Gate Drivers (HVICs) are designed for DC and multiphase motor drive, DC-DC converter, inverter, high side load switch, Piezo-Injector and other applications. They are fully AEC-Q100 compliant, and feature high noise immunity, low power consumption, undervoltage lockout and a wide operating temperature range of -40°C to +125°C.

HVIC High-Side Isolation

HIGH-SPEED, LOW-SIDE, GATE DRIVERS

Low-Side Gate Drivers

Fairchild's line of high-speed, low-side gate drivers provide high peak currents of several amps that are needed to switch Power MOSFETs efficiently. These provide internal power-up protection, high noise immunity and appropriate power dissipation for 125°C operation.

Input level flexibility is provided with versions for both CMOS, TTL and external threshold levels. Output performance is optimized by a proprietary compound MillerDrive™ architecture for strong gate drive current and low voltage drop. Industry standard pinouts allow easy migration to Fairchild's MillerDrive for improved design performance.

Additionally, the outputs are held low if no input signal is present for fail-safe operation. The low well-matched propagation delay, low quiescent current, fail-safe input and under voltage lockout features provide for fail-safe design with minimal component count. Fairchild's automotive gate drivers are all AEC-Q100 qualified and operate over a -40 to 125°C ambient temperature range.

FDBS09H04 and FDDS10H04 Smart High-Side Switches

The FDBS09H04 and FDDS10H04 devices provide ratiometric current monitoring of loads by a CPU, allowing the diagnostic thresholds to be application specific. They can be used with PWM of lighting loads for smart load management. The internal reverse battery protection scheme allows for direct drive of loads which can operate under reverse battery without damage. They also can be used to drive inductive loads, with robust EAS ratings.

FDDS100H06 Smart High-Side Switch

The FDDS100H06 has fixed diagnostic limits for open and short circuit. The interface is directly compatible with microprocessor logic. It also is compatible with PWM lighting applications and inductive loads.

⁽¹⁾ Logic Level Interface

High-Current Half Bridge

The FAN7093 is capable of PWM above audio frequencies for EMC compatibility. It can be used alone to drive high current motors such as pumps and cooling fans. The devices can be paired for full-bridge capability, for applications such as reversible cooling fans.

Automotive Power Modules

Fairchild provides standard and customized Automotive Power Modules for applications such as brushless DC motor control in Electrical Power Steering (EPS) and Electrohydraulic Power Steering (EHPS), transmission control, HVAC and DC-DC converters and solid state switches for voltage levels between 12V and 600V and current levels up to and beyond 160A.

Design Advantages Include:

- 3-phase inverter, H-bridge, solid state switch and other configurations
- Active components
 - MOSFETs, IGBTs, diodes
- Integrated passive and active components (optional)
 - 1% tolerance DC bus current sensing
 - NTC thermistor for temperature feedback
 - Built-in gate drivers
- High current capability
- Easy and effective thermal interface with exposed and electrically isolated substrate
- Low total electrical resistance
- Low parasitic inductance, low EMI
- Compact size
- Quick and easy installation
- Interconnection with terminals by screws, soldering or welding

Electric Power Steering (EPS) Module Schematic

Note: All materials present in the power module meet UL flammability rating class 94V-0 or higher. 100% Pb free.

OPTOELECTRONICS

High Performance Optocouplers

- High Speed Logic Gate
- High Performance Transistor
- Low Voltage, High Performance
- Specific Function

IGBT/MOSFET Gate Drivers

- IGBT/MOSFET Gate Drivers

Infrared

- Ambient Light Sensors
- Emitting Diodes
- Optical Interrupt Switches
- Photo Sensors
- Photo Sensor – Transistors
- Reflective Sensors

Phototransistor Optocouplers

- Isolated Error Amplifier
- Photo Darlington Output
- Phototransistor Output - DC Sensing Input
- Phototransistor Output - AC Sensing Input

TRIAC Driver Optocouplers

- Random Phase TRIAC Driver
- Zero Crossing TRIAC Driver

AUTOMOTIVE PRODUCTS

Automotive Discrete Power

- Automotive Ignition IGBTs
- Automotive IGBTs
- Automotive N-Channel MOSFETs
- Automotive P-Channel MOSFETs
- Automotive Rectifiers

Automotive Gate Drivers

- High Voltage Gate Drivers (HVICs)
- Low Voltage Gate Drivers

Automotive Smart Power Switches

- Automotive Smart Power Switches

CIRCUIT PROTECTION

Reverse Polarity Protection

- Blocking Diodes
- Reverse Bias Protection Switches
- Schottky diodes

Transient Voltage Suppressors (TVS)

- Mid Power TVS
- Power TVS (> 400W)

Данный компонент на территории Российской Федерации

Вы можете приобрести в компании MosChip.

Для оперативного оформления запроса Вам необходимо перейти по данной ссылке:

<http://moschip.ru/get-element>

Вы можете разместить у нас заказ для любого Вашего проекта, будь то серийное производство или разработка единичного прибора.

В нашем ассортименте представлены ведущие мировые производители активных и пассивных электронных компонентов.

Нашей специализацией является поставка электронной компонентной базы двойного назначения, продукции таких производителей как XILINX, Intel (ex.ALTERA), Vicor, Microchip, Texas Instruments, Analog Devices, Mini-Circuits, Amphenol, Glenair.

Сотрудничество с глобальными дистрибьюторами электронных компонентов, предоставляет возможность заказывать и получать с международных складов практически любой перечень компонентов в оптимальные для Вас сроки.

На всех этапах разработки и производства наши партнеры могут получить квалифицированную поддержку опытных инженеров.

Система менеджмента качества компании отвечает требованиям в соответствии с ГОСТ Р ИСО 9001, ГОСТ РВ 0015-002 и ЭС РД 009

Офис по работе с юридическими лицами:

105318, г.Москва, ул.Щербаковская д.3, офис 1107, 1118, ДЦ «Щербаковский»

Телефон: +7 495 668-12-70 (многоканальный)

Факс: +7 495 668-12-70 (доб.304)
